Integrating Green Chemistry and Sustainable Engineering Shahid Ul Islam,2019-04-01 This groundbreaking book covers the recent advances in sustainable technologies and developments and describes how green chemistry and engineering practices are being applied and integrated in various industrial sectors Over the past decade the population explosion rise in global warming depletion of fossil fuel resources and environmental pollution

have been the major driving force for promoting and implementing the principles of green chemistry and sustainable engineering in all sectors ranging from chemical to environmental sciences. It plays a growing role in the chemical processing industries. Green chemistry and engineering are relatively new areas focused on minimizing generations of pollution by utilizing alternative feedstocks, developing, selecting, and using less environmentally harmful solvents, finding new synthesis pathways, improving selectivity in reactions, generating less waste, avoiding the use of highly toxic compounds, and much more. In an effort to advance the discussion of green chemistry and engineering, this book contains 19 chapters describing greener approaches to the design and development of processes and products. The contributors describe the production of third generation biofuels, sustainable and economic production of hydrogen by water splitting using solar energy, efficient energy harvesting mechanisms involved in the conversion of biomass, green nanocomposites, bio-based polymers, ionic liquids, as green solvents, sustainable nitrogen fixation, bioremediation, and much more. The book aims at motivating chemists and engineers, as well as postgraduate and PhD students and postdocs, to pay attention to an acute need for the implementation of green chemistry principles in the field of chemical engineering, biomedical engineering, agriculture, environmental engineering, chemical processing, and material sciences.

This edited book includes over one hundred and eighty short papers that were presented during the third edition of EMCEI which was held in Sousse, Tunisia, in June 2021. Nowadays, experts as well as most of the general public know that the Mediterranean and surrounding regions are facing environmental degradation that is accelerating at an unprecedented rate. The main causes are the natural and human-induced climate change, increasing pollution, urban growth, and the overexploitation and unsustainable use of resources due to rapid population growth. The effects are seen in several indicators such as the warming, more frequent extreme events, severe droughts, water shortages, contraction of natural resources, changes in land use, and landscape deterioration, decreasing agricultural yields, biodiversity loss, deterioration of the ecosystems, corrosion of the natural coastal environment, sea level rise, and ocean acidification. In addition to these more recent issues, the Mediterranean and surrounding region naturally experience a number of hazards such as floods, droughts, desertification, fires, catastrophic forest diebacks, earthquakes, and volcanic eruptions. By presenting a wide range of environmental topics and new findings relevant to a variety of problems in these regions, this book appeals to anyone working in the subject area and especially students interested in learning more about new developments in environmental research initiatives in light of the worsening environmental degradation of the Mediterranean and surrounding areas, making environmental and resource protection an increasingly important issue that impedes sustainable development and social well
