Helmet Mounted Displays Design Issues For Rotary Wing Aircraft:

Helmet Mounted Displays Clarence E. Rash, 2000 The incorporation of technology into aviation has been exponential. Advancements in microelectronics, stealth technology, engine design, and electronic sensors and displays have converted simple aircraft into formidable flying machines. In this book, recognised experts in aviation helmet mounted displays (HMDs) summarise 25 years of knowledge and experience in the area of HMD visual, acoustic, and biodynamic performance and user interface issues such as sizing, fitting, and emergency egress.

Helmet Mounted Displays Clarence E. Rash, 1999 *Design Issues for Helmet-mounted Display Systems for Rotary-wing Aviation* Clarence E. Rash, Army aeromedical research unit, Fort Rucker, U.S. Army Aeromedical Research Laboratory, 1998 Since the 1970s, the trend in Army aviation has been to rely on helmet mounted displays (HMDs) to provide the aircrew with pilotage imagery, flight information, and fire control imagery and symbology. This paper is intended to serve as both a checklist and a guide for designers of future integrated helmet and display systems for rotary wing aircraft. In this paper, 1) salient performance parameters of such systems are identified, 2) recommendations for values of these parameters are suggested based on past research and the opinions of subject matter experts, 3) an analysis of potential health and safety hazards is provided, 4) a human factors engineering assessment (HFEA) is provided, and 5) lessons learned from previously fielded U.S. Army HMD systems are summarized. However, this paper is not a cookbook for building an integrated helmet and display system.
