Failure Of Apoptosis And Cancer Metastasis:

Failure of Apoptosis and Cancer Metastasis Gennadi V. Glinsky, 1998-11-13 This book summarizes recent reports on adhesion dependent regulation of apoptosis The author discusses data indicating that highly metastatic cancer cells exhibit a superior survival ability and resistance to apoptosis induced by diverse external signals He also shows that increased survival of metastatic cancer cells compared to nonmetastatic or poorly metastatic cells is associated with their enhanced galectin mediated homotypic aggregation and dysfunction of adhesion dependent regulation of apoptosis Profound deficiency of two major apoptosis execution mechanisms has been identified as a main characteristic of apoptosis failure in metastatic cancer Unravelling Cancer Signaling Pathways: A Multidisciplinary Approach Kakoli Bose, Pradip cells Chaudhari, 2019-11-25 Unravelling the intricate cell signalling networks and their significance in cancer poses major intellectual challenge Keeping this in mind the book aims at understanding the mechanism of action of different proteins and their complexes in the cancer signalling pathways Hence the proposed book that comprises 20 chapters provides a comprehensive introduction on cell signalling its alterations in cancer molecules that have been popular targets as well as the ones that are emerging as targets In addition it discusses different forms of therapy that are coming up for its treatment Other than that a major portion of the book is focused on studying different disciplines at the interface of biology and other areas of science that are being used to understand cancer biology in depth **Drug Resistance in Cancer Cells** Kapil Mehta, Zahid H. Siddik, 2009-06-12 It was estimated that in 2008 1 437 180 patients would receive a new cancer diagnosis and 565 650 individuals would die of cancer Jemal et al 2008 Since the vast majority of patients dying of cancer will have had anticancer therapy both c ventional chemotherapy and novel targeted therapy it can be concluded that these patients are dying with drug resistant cancer The term multidrug resistance is also apt in that these patients die after having undergone multiple rounds of different and structurally unrelated cancer therapies However for some the concept of m tidrug resistance is a worn out idea stemming from disappointment with the drug resistancereversalstrategiesthatwerecarriedoutinthe1990susingpumpinhibitors to block drug resistance mediated by P glycoprotein product of the MDR 1 gene However if one takes the larger de nition multidrug resistance as simultaneous resistance to multiple structurally unrelated anticancer therapies its existence c not be denied. The purpose of this book is to explore new concepts related to drug resistance in cancer including resistance to the new molecularly targeted agents Perhaps new terminology is needed for resistance that occurs following therapy with the targeted agents Novel Targeted Agent Resistance NTR Alternatively we can return to the original de nition of multidrug resistance as simply the res tance to multipleagents that occurs in the course of normalcancer progression This resistance is likely to be mediated by many factors Cancer Metastasis David Lyden, Danny R. Welch, Bethan Psaila, 2011-04-25 Metastasis is responsible for a large burden of morbidity and mortality among cancer patients and currently few therapies specifically target metastatic disease Further

scientific dissection of the underlying pathways is required to pave the way for new therapeutic targets This groundbreaking new text comprehensively covers the processes underlying cancer metastasis and the clinical treatment of metastatic disease Whereas previous volumes have been compendia of laboratory research articles the internationally renowned authors of this volume have summarized the state of the art research in the metastasis field A major section covers the cellular and molecular pathways of metastasis and experimental techniques and the systems and models applied in this field Subsequently the clinical aspects of the major cancer types are considered focusing on disease specific research and therapeutic approaches to metastatic disease The focus is on novel pathophysiological insights and emerging therapies future directions for research and unmet clinical needs are also discussed Targeting the Wnt/β-catenin Signaling Pathway in Cancer Simone Patergnani, Donald Buchsbaum, Gary Piazza, 2022-11-01 **Stem Cells and Cancer** Rebecca G. Bagley, Beverly A. Teicher, 2009-04-20 Significance of Stem Cells to Tumor Development Cancer stem cells remain a controversial topic and the criteria that define cancer stem cells are continuing to evolve A recent surge in stem cell research has ignited a field of discovery into many human diseases including diabetes neuropathologies and cancer By replacing specific differentiated cells that have either been lost or died stem cell therapy proves to be a very promising approach to the treatment of many debilitating diseases Though stem cells may provide therapeutic benefit under certain conditions they are also often implicated in the initiation progression and therapeutic resistance of malignant disease This first edition of Stem Cells and Cancer is intended to give a current perspective on the role of stem cells in cancer and strategies for novel therapies directed toward tumor stem cells The current cancer stem cell hypothesis is presented in several chapters with distinctions made between the hierarchical and stochastic models of tumor cell development Stemness self renewal pluripotency clonality and tumorigenicity are important concepts applied towards defining cancer stem cells Signaling pathways such as Wnt Sonic Hedgehog Notch and Bmi 1 that are involved in differentiation proliferation and survival are implicated in the malignant process Additional chapters address the identification of cancer stem cell populations through the evaluation of molecular markers such as CD133 CD44 and CD24 for example or by Hoescht dye exclusion to recognize side populations Mesenchymal and hematopoietic stem cells are described as well as mouse models that are employed to elucidate the properties and functionality of stem cells in cancer and the stem cell niche This book encompasses a wide variety of human cancers that include but are not limited to leukemia gliomas breast and prostate cancers Resistance to conventional therapies genetic versus epigenetic changes that affect therapeutic response and strategies to prevent disease recurrence are challenges have been incorporated into this volume Stem Cells and Cancer represents a compendium of cutting edge research by experts in the field and will be instrumental in the study of this intriguing line of investigation for many years to come Rebecca Bagley is a senior scientist at Genzyme Corporation and has worked in the biotechnology industry for 20 years with degrees in biology from Wellesley College and Harvard University Her expertise in drug

Explaining Cancer Anya Plutynski,2018-07-18 In Explaining Cancer Anya Plutynski addresses a variety of philosophical questions that arise in the context of cancer science and medicine She begins with the following concerns How do scientists classify cancer Do these classifications reflect nature s joints How do cancer scientists identify and classify early stage cancers What does it mean to say that cancer is a genetic disease What role do genes play in mechanisms for cancer What are the most important environmental causes of cancer and how do epidemiologists investigate these causes How exactly has our evolutionary history made us vulnerable to cancer Explaining Cancer uses these questions as an entr e into a family of philosophical debates It uses case studies of scientific practice to reframe philosophical debates about natural classification

One imperative approach to develop novel anticancer agents with potent efficiency is to discover natural resource derived bioactive compounds Diverse phytochemical constituents like vincristine vinblastine taxol analogs etc derived from plants have been manifested as effective therapeutics in the treatment prevention and management of cancer Therefore phytochemical constituents aid as prime source and candidates for the discovery of anticancer drugs particularly when they are screened against their molecular targets via various approaches Plants are predicted to have innumerable functional phytochemical constituents with potent features which can be explored via in silico in vitro as well as in vivo approaches for targeted cancer therapy and the most suitable cascade can be identified Therefore this research topic aims to cover the current trends and advancements in phytotherapies with an emphasis on targeted strategies in cancer precision medicine **Galectins in Cancer and Translational** Medicine Armando Bartolazzi, 2018-11-29 In the post genomic era many efforts have been devoted to better understanding the biological information encoded by the cell glycome in normal and pathologic conditions. The glycan signature of human cells plays a pivotal role in regulating fundamental biological processes which are critical for cell physiology and for cancer as well Galectins also worded S type lectins are an evolutionarily conserved family of endogenous lectins which bind carbohydrates with high specificity These molecules which can be found both intracellularly and in the extracellular milieu are functionally active in converting glycan containing information into cell biological programs This fashionable mechanism of signal transduction plays a relevant role in regulating several biological functions including RNA splicing gene transcription cell migration and differentiation apoptosis immune response and tumor growth and progression It is not surprising indeed that a large number of studies on galectin glycan interactions and galectins expression and function in human diseases have been published in the recent literature spanning from immunology to cardiovascular medicine from
