Gorilla Biology Andrea Beth Taylor, Michele Lynn Goldsmith, 2003 Gorillas are one of our closest living relatives are the largest living primate yet are perhaps the most misunderstood great ape Teetering on the brink of extinction they are also of increasing conservation concern Gorilla Biology is the first comparative perspective on gorilla populations throughout their range

Encountering Gorillas James L. Newman, 2013-07-05 Gorillas the largest of the apes inhabiting our planet have been a source of fear awe and inspiration to humans In this book James L Newman brings a lifetime of study of Africa to his compelling story of the rich and varied interaction between gorillas and humans since earliest contact He illuminates the complex relationship over time through the interlinked themes of discovery exploitation understanding and continuing survival Tragically the number of free living gorillas facing habitat loss disease and poaching has declined dramatically over the course of the past century and the future of the few that remain is highly uncertain At the same time those in zoos and sanctuaries now lead much more secure lives than they did earlier Newman follows this transition highlighting the roles played by key individuals both humans and gorillas Among the former have been adventurers opportunists writers and scientists The latter include real gorillas such as Gargantua and Koko and fictional ones notably King Kong and Mighty Joe Young This thoughtful and engaging book helps us understand how our image of gorillas has been both distorted and clarified through culture and science for centuries and how we now control the destiny of these magnificent great apes

Conservation in the 21st Century: Gorillas as a Case Study T.S. Stoinski, H. D. Steklis, P.T. Mehlman, 2009-07-09 Like other fields of science wildlife conservation is a changing field Threats facing wild populations of apes and other species say 20 years ago are likely not the same ones most pressing today and even where threats have remained unchanged more effective means of addressing them may be available now Conservation scientists have learned from many years of experience and both theoretical and technological advances today provide conservation tools not available in the past This volume identifies the primary problems faced in conserving wild populations of gorillas throughout Africa pinpointing new approaches to solving these problems and outlining the increased role that zoos can play in gorilla conservation It includes expertise of field scientists in a variety of disciplines to discuss current conservation threats novel approaches to conservation and potential solutions

of Africa's mammals With more than 1 160 species and 16 18 orders Africa has the greatest diversity and abundance of mammals in the world The reasons for this and the mechanisms behind their evolution are given special attention in the series Each volume follows the same format with detailed profiles of every species and higher taxa The series includes hundreds of colour illustrations and pencil drawings by Jonathan Kingdon highlighting the morphology and behaviour of the species concerned as well as line drawings of skulls and jaws by Jonathan Kingdon and Meredith Happold Every species also includes a detailed distribution map Edited by Jonathan Kingdon David Happold Tom Butynski Mike Hoffmann Meredith Happold and Jan Kalina and written by more than 350 authors all experts in their fields Mammals of Africa is as comprehensive a compendium of current knowledge as is possible Extensive references alert readers to more detailed information Volume II is edited by Thomas Butynski Jonathan Kingdon and Jan Kalina and contains profiles of 93 species of primates this includes the great apes Old World monkeys lorises and galagos

Gorilla Pathology and Health John E Cooper, Gordon Hull, 2016-12-21 Gorilla Pathology and Health With a Catalogue of Preserved Materials consists of two cross referenced parts The first the book itself is a review of pathological changes and tissue responses in gorillas Gorilla gorilla and G beringei with an emphasis on free living animals but also with reference to those in captivity The comparative aspects are discussed stressing the relevance of research to both gorillas and humans What makes the publication truly unique however is the second part a comprehensive descriptive catalogue of the location and nature of gorilla material in museums and scientific institutions throughout the world This is of great consequence because free living gorillas are strictly conserved with restricted access so the location of a wealth of preserved tissues and other material that has been collected over the decades is a great benefit for research and study This book can and should be used to gain cardinal knowledge regarding the biology and pathology of this genus The combination of book and catalogue in this extensive compilation makes it an invaluable tool for all those concerned with the health welfare and conservation of gorillas one of our nearest living relatives Brings together studies data and clinical practice from difficult to access or obscure journals and NGO reports in different languages for all interested parties and practitioners Provides perspectives on existing research in gorilla pathology both for those studying conservation practices and those seeking an understanding of comparable diseases in humans Includes illustrative figures on gross and microscopic pathological changes museum specimens photos of field necropsy and techniques and examples of laboratory tests Features an extensive list of references and further reading in different languages Incorporates a comprehensive descriptive catalogue of gorilla material from around the world

Primates and Cetaceans Juichi Yamagiwa, Leszek Karczmarski, 2013-11-20 In this book the editors present a view of the socioecology of primates and cetaceans in a comparative perspective to elucidate the social evolution of highly intellectual mammals in terrestrial and aquatic environments Despite obvious differences in morphology and eco physiology there are many cases of comparable sometimes strikingly similar patterns of sociobehavioral complexity A number of long term field studies have accumulated a substantial amount of data on the life history of various taxa foraging ecology social and sexual relationships demography and various patterns of behavior from dynamic fission fusion to long term stable societies from male bonded to bisexually bonded to matrilineal groups Primatologists and cetologists have come together to provide four evolutionary themes 1 social complexity and behavioral plasticity 2 life history strategies and social evolution 3 the interface between behavior demography and conservation and 4 selected topics in comparative behavior These comparisons of taxa that are evolutionarily distant but live in comparable complex sociocognitive environments boost our appreciation of their sophisticated mammalian societies and can advance our understanding of the ecological factors that have shaped their social evolution This knowledge also facilitates a better understanding of the day to day challenges these animals face in the human dominated world and may improve the capacity and effectiveness of our conservation efforts

The Anthropology of Obesity in the United States Anna Bellisari, 2016-03-17 This volume examines the biocultural dimensions of obesity from an anthropological perspective in an effort to broaden understanding of a growing public health concern The United States of America currently has the highest rates of obesity among developed countries with an alarming rise in prevalence in recent decades which promises to affect the nation for years to come Bellisari helps students to grasp the complex nature of this obesity epidemic demonstrating that it is the consequence of many interacting forces which range from individual genetic and physiological predispositions to national policies and American cultural beliefs and practices As much a social problem as an individual one the development of obesity is in fact encouraged by the pattern of high consumption and physical inactivity that is promoted by American economic political and ideological systems With a range of up to date scientific and medical data *The Anthropology of Obesity in the United States* provides students with a

comprehensive picture of obesity its multiple causes and the need for society wide action to address the issue

Gorilla Society Alexander H. Harcourt, Kelly J. Stewart, 2008-09-15 Societies develop as a result of the interactions of individuals as they compete and cooperate with one another in the evolutionary struggle to survive and reproduce successfully Gorilla society is arranged according to these different and sometimes conflicting evolutionary goals of the sexes In seeking to understand why gorilla society exists as it does Alexander H Harcourt and Kelly J Stewart bring together extensive data on wild gorillas collected over decades by numerous researchers working in diverse habitats across Africa to illustrate how the social system of gorillas has evolved and endured Gorilla Society introduces recent theories explaining primate societies describes gorilla life history ecology and social systems and explores both sexes evolutionary strategies of survival and reproduction With a focus on the future Harcourt and Stewart conclude with suggestions for future research and conservation An exemplary work of socioecology from two of the world's best known gorilla biologists Gorilla Society will be a landmark study on a par with the work of George Schaller a synthesis of existing research on these remarkable animals and the societies in which they live

discuss issues that include access to and ownership of fossil material Primatologists are concerned about the well being of their subjects in laboratory and captive situations and must address yet another set of issues regarding endangered animal populations and conservation in field situations The first comprehensive account of the ethical issues facing biological anthropologists today *Biological Anthropology and Ethics* opens the door for discussions of ethical issues in professional life

Apes and Human Evolution Russell H. Tuttle, 2014-02-17 Russell Tuttle synthesizes a vast literature in primate evolution and behavior to explain how apes and humans evolved in relation to one another and why humans became a bipedal tool making culture inventing species distinct from other hominoids He refutes the theory that we are sophisticated instinctively aggressive and destructive killer apes **International Journal of Primatology**, 2006 **High Altitude Primates**

Nanda B. Grow, Sharon Gursky-Doyen, Alicia Krzton, 2013-11-19 The basic goal of the volume is to compile the most up to date research on how high altitude affects the behavior ecology evolution and conservation status of primates especially in comparison to lowland populations Historically the majority of primate studies have focused on lowland populations However as the lowlands have been disappearing more and more primatologists have begun studying populations located in higher altitudes High altitude populations are important not only because of their uniqueness but also because they highlight the range of primate adaptability and the complex variables that are involved in primate evolution These populations are good examples of how geographic scales result in diversification and or speciation Yet there have been very few papers addressing how this high altitude environment affects the behavior ecology and conservation status of these primates **Primates of**

Western Uganda Nicholas E. Newton-Fisher, Hugh Notman, James Durward Paterson, Vernon Reynolds, 2007-02-05 This volume covers aspects of ecology behavior genetics taxonomy cultural patterns hunting by non human primates physiology dietary chemistry and ecotourism in several major clades of primates from galagos and pottos through cercopithecoids to hominoids Biological Distance Analysis Marin A. Lambert, Margaret A. H. Bryer, Jessica M. Rothman, 2024-07-26 Exploring everything from nutrients to food acquisition and research methods a comprehensive synthesis of the study of diet and feeding in nonhuman primates What do we mean when we say that a diet is nutritious Why can some animals get all the energy they need from eating leaves while others would perish on such a diet Why don't mountain gorillas eat fruit all day as chimpanzees do Answers to these questions about food and feeding are among the many tasty morsels that emerge from this authoritative book Informed by the latest scientific tools and millions of hours of field and laboratory work on species across the primate order and around the globe this volume is an exhaustive synthesis of our understanding of what why and how primates eat State of the art information presented at physiological behavioral ecological and evolutionary scales will serve as a road map for graduate students researchers and practitioners as they work toward a holistic understanding of life as a primate and the urgent conservation consequences of diet and food availability in a changing world *World Atlas of Great Apes and Their Conservation* Julian Oliver Caldecott, Lera Miles, 2005 This comprehensive and authoritative review of the distribution and conservation status of Great Apes includes individual country profiles for each species and overview chapters on ape biology ecology and conservation challenges
