### **I. Ya Pomeranchuk And Physics At The Turn Of The Century, Proceedings Of The International Conference**

Alexander Berkov, Nikolay B Narozhny, Lev Borisovich Okun, 2004-02-09 This conference was dedicated to the memory of the great scientist and teacher I Ya Pomeranchuk on the occasion of his 90th birthday It was multidisciplinary and covered those fields of physics where Pomeranchuk made outstanding contributions including high energy physics quantum field theory theory of liquid helium condensed matter physics physics of electromagnetic processes in matter and astrophysics Most of the plenary talks and reports were given by Pomeranchuk's former students and coworkers The proceedings volume provides an excellent review of some important areas of modern physics and reflects the Pomeranchuk school's contributions to modern physics It is useful for graduate students lecturers and researchers in high energy physics quantum field theory and condensed matter physics The proceedings have been selected for coverage in Index to Scientific Technical Proceedings ISTP ISI Proceedings Index to Scientific Technical Proceedings ISTP CDROM version ISI Proceedings **The CBM Physics**

**Book** Bengt Friman, Claudia Höhne, Jörn Knoll, Stefan Leupold, Jorgen Randrup, Ralf Rapp, Peter Senger, 2011-03-03 This exhaustive survey is the result of a four year effort by many leading researchers in the field to produce both a readable introduction and a yardstick for the many upcoming experiments using heavy ion collisions to examine the properties of nuclear matter The book falls naturally into five large parts first examining the bulk properties of strongly interacting matter including its equation of state and phase structure Part II discusses elementary hadronic excitations of nuclear matter Part III addresses the concepts and models regarding the space time dynamics of nuclear collision experiments Part IV collects the observables from past and current high energy heavy ion facilities in the context of the theoretical predictions specific to compressed baryonic matter Part V finally gives a brief description of the experimental concepts The book explicitly addresses everyone working or planning to enter the field of high energy nuclear physics *Dark Matter in Astro- and Particle Physics* Hans-Volker Klapdor-Kleingrothaus, Richard Arnowitt, 2006-02-23

The Fifth HEIDELBERG International Conference on Dark Matter in Ast and Particle Physics DARK 2004 took place at Texas A M University College Station Texas USA October 3-9 2004 It was after Cape Town 2002 the second conference of this series held outside Germany The earlier meetings starting in 1996 were held in Heidelberg Dark Matter is still one of the most exciting and central fields of ast physics particle physics and cosmology The conference covered as usual for this series a large range of topics theoretical and experimental Theoretical talks covered SUSY SUGRA phenomenology which provides at present a preferred theoretical framework for the existence of cold dark matter Also included were other possible explanations of dark matter such as SUSY Q balls exciting New Symmetries etc The most important experiments in the underground search for cold and hot dark matter were presented Talks describing the current experimental dark matter bounds what might be obtained in the near future and the reach of future large i e one ton detectors were given The potential

of future colliders to correlate accelerator physics with dark matter searches was also outlined. Thus the reader will be able to see the present status and future prospects in the search for dark matter. The exciting astronomical evidence for dark matter and corresponding observations concerning the Milky Way's black hole, high redshift clusters, wakes in dark matter halos, were other important topics at the conference.

*Black Holes, Cosmology And Extra Dimensions (Second Edition)* Kirill A. Bronnikov, Sergey G. Rubin, 2021-06-29. Assuming basic knowledge of special and general relativity, this book guides the reader to problems under consideration in modern research concerning black holes, wormholes, cosmology, and extra dimensions. Its first part is devoted to local strong field configurations: black holes and wormholes in general relativity and its most relevant extensions: scalar tensor  $f(R)$  and multidimensional theories. The second part discusses cosmology, including inflation, and problems of a unified description of the whole evolution of the universe. The third part concerns multidimensional theories of gravity and contains a number of original results obtained by the authors. Expository work is conducted for a mechanism of symmetries and fundamental constants formation. The original approach to nonlinear multidimensional gravity that is able to construct a unique perspective describing different phenomena is highlighted. Much of the content was previously presented only in journal publications and is new for book contents, e.g., on regular black holes, various scalar field solutions, wormholes, and their stability, inflation, clusters of primordial black holes, and multidimensional gravity. The last two topics are added in this new edition of the book. The other chapters are also updated to include new discoveries like the detection of gravitational waves.

**Gribov Memorial Volume** Yuri Dokshitzer, Peter L'vov, Julia Nyiri, 2006. Vladimir Naumovich Gribov was one of the most outstanding theorists, a key figure in the creation of the modern elementary particle physics. His many discoveries are famous and well accepted by the physics community: Gribov-Regge theory of high energy hadron interactions, Gribov vacuum pole, Pomeron, Reggeon field theory, parton evolution equations, neutrino oscillations, Gribov copies in non-Abelian gauge field theories, etc. Some of his ideas look unacceptable and strange at the first glance. Even at the second glance. Nowadays, under the weight of new theoretical developments and experimental results, his ideas are receiving the recognition they deserve. The Gribov Memorial Workshop, organized on his 75th birthday in Budapest, Hungary, in 2005, clearly demonstrated the wealth and fertilization force of his ideas. Close colleagues, younger followers, world experts of the quark-hadron world have gathered together to display new angles of the Gribov heritage. And to remember the personality of a great man. This book collects the talks presented at and contributed to the Gribov 75 Memorial Workshop.

Nonequilibrium Quantum Field Theory Esteban A. Calzetta, Bei-Lok B. Hu, 2023-02-09. This 2008 book, reissued as OA, captures the essence of nonequilibrium quantum field theory for graduate students and researchers.

**Reviews of Accelerator Science and Technology** Alexander Wu Chao, Weiren Chou, 2015. As accelerator science and technology progressed over the past several decades, the accelerators themselves have undergone major improvements in multiple performance factors: beam energy, beam power, and beam brightness. As a consequence, accelerators have found

applications in a wide range of fields in our life and in our society The current volume is dedicated to applications in energy and security two of the most important and urgent topics in today's world This volume makes an effort to provide a review as complete and up to date as possible of this broad and challenging subject It contains overviews on each of the two topics and a series of articles for in depth discussions including heavy ion accelerator driven inertial fusion linear accelerator based ADS systems circular accelerator based ADS systems accelerator reactor interface accelerators for fusion material testing cargo inspection proton radiography compact neutron generators and detectors It also has a review article on accelerator science and technology in Canada with a focus on the TRIUMF laboratory and an article on the life of Bruno Touschek a renowned accelerator physicist Provided by publisher

**The Physics of Ionized Gases** Ljupco Hadzievski, Tasko Grozdanov, Natasa Bibic, 2004-12-14 The very nature of the Symposium on the Physics of Ionized Gases SPIG is to have four different fields that converge into one multidisciplinary field of the physics of ionized gases gas phase and binary collisions collisions with surfaces low temperature plasmas and collective phenomena These four fields have strong interactions in numerous applications However due to the development of specialized international conferences it has become increasingly rare that such a wide range of topics is covered at a single conference As the four fields often overlap and merge in numerous fundamental studies and more importantly applications SPIG serves as a venue for exchanging ideas in the four related fields This volume contains the invited lectures topical invited lectures and progress reports presented at the 22nd Summer School and International Symposium on the Physics of Ionized Gases SPIG 2004 The papers were peer reviewed by the scientific committee

*Spectral Line Shapes in Astrophysics* Luka C. Popovic, Milan S. Dimitrijevic, 2007-10-03 The VI Serbian Conference on Spectral Line Shapes in Astrophysics was about the investigation of spectral line shapes in extragalactic objects such as active galactic nuclei stellar atmospheres and astrophysical spectra in general Atomic spectral line shapes in various discharges and plasma devices was also discussed The main purpose of the Conference was to present and discuss new results found by participants working in this research field and to review significant topics
