**Ideas for a Philosophy of Nature** F. W. J. von Schelling, 1988-09-30 This is an English translation of Schelling's Ideas for a Philosophy of Nature first published in 1797 and revised in 1803 one of the most significant works in the German tradition of philosophy of nature and early nineteenth century philosophy of science It stands in opposition to the Newtonian picture of matter as constituted by inert impenetrable particles and argues instead for matter as an equilibrium of active forces that engage in dynamic polar opposition to one another In the revisions of 1803 Schelling incorporated this dialectical view into a neo Platonic conception of an original unity divided upon itself The text is of more than simply historical interest its daring and original vision of nature philosophy and empirical science will prove absorbing reading for all philosophers concerned with post Kantian German idealism for scholars of German Romanticism and for historians of science

**Researching Education and the Environment** Alan Reid, William Scott, 2007-10-25 Previously published as a special issue of Environmental Education Research this collection includes some of the most influential and important articles contributed to the field over the last decade Drawing out the best articles from volumes one to ten the editors highlight six major themes EE and ESD tension or transition locating the environment The Idea of Nature in Disney Animation David S. Whitley, 2008 David Whitley's compelling study complicates our understanding of the classic Disney canon by focusing on the way images of the natural world are mediated within popular art for children He examines a range of Disney's feature animations from Snow White to Finding Nemo to show that even as the films communicate the central ideologies of their times they also express the ambiguities and tensions that underlie these dominant values Origin(s) of Design in Nature Liz Swan, Richard Gordon, Joseph Seckbach, 2012-08-27 Origin's of Design in Nature is a collection of over 40 articles from prominent researchers in the life physical and social sciences medicine and the philosophy of science that all address the philosophical and scientific question of how design emerged in the natural world The volume offers a large variety of perspectives on the design debate including progressive accounts from artificial life embryology complexity cosmology theology and the philosophy of biology This book is volume 23 of the series Cellular Origin Life in Extreme Habitats and Astrobiology www.springer.com series 5775 Trust, Our Second Nature Thomas O. Buford, 2009-01-16 The thesis of this book is that only a social personalism and no form of impersonalism can adequately account for the solidarity and stability of what we individuals share with all other members of our society our second nature In the ancient world the discussion of society at least since Plato and Aristotle began with the social nature of individuals as found in families and proceeded to topics such as the formation and the well ordering of societies according to eternal principles grasped by reason Since the beginning of the modern world at least since Hobbes and Locke the discussion of society began with the relation of persons and society and then moved on to other topics usually political and legal ones The central problem was to find the basis on which individuals formed societies and how they could do so Buford's question is with a more basic issue What do individuals

and society share in common or what philosophers since Cicero have called our second nature and how to best understand its unity and stability The crisis of our culture in the erosion of both solidarity and stability pointedly manifests itself in our second nature There the culture in which we live is felt lived and shared Buford asks how we can lay bare our second nature revealing the extent of the crisis Our second nature is the form of social actions of persons in triadic relations and Buford argues that it is there that we find that trust unifies a society and provides the basis for the institutions that stabilize it
