International Symposium in Memory of Hua Loo Keng Sheng Gong, Qi-keng Lu, Yuan Wang, Lo Yang, 2013-12-21 The international symposium on number theory and analysis in memory of the late famous Chinese mathematician Professor Hua Loo Keng took place in August 1988 at the Tsinghua University in Beijing Excellent survey lectures and expositions of the most recent results in number theory and analysis were given by experts from all over the world While Volume I focuses on number theory Volume II deals mainly with several complex variables differential geometry and classical complex analysis Both volumes also include two fascinating accounts of Professor Hua Loo Keng's life and work by Professor S Iyanaga and Professor Wang Yuan Highlights in Volume I D A Hejhal Eigenvalues of the Laplacian for PSL 2 Z Some new Results and Computational Techniques A A Karatsuba On the Zeros of Riemann's Zeta Function on the Critical Line H E Richert Aspects of the Small Sieve W M Schmidt On the Number of Good Simultaneous Approximations to Algebraic Numbers M V Subbarao Wang Yuan On a Generalized Waring's Problem in Algebraic Number Fields G WA1 4stholtz From Baker to Mordell Highlights in Volume II F Capocasa F Catanese Periodic Meromorphic Functions and Lefschetz Type Theorems on Quasi Abelian Varieties S S Chern Families of Hypersurfaces Under Contact Transformations in \mathbb{R}^n G Dethloff H Grauert On the Infinitesimal Deformation of Simply Connected Domains in One Complex Variable D Drasin Asymptotic Periods of Entire and Meromorphic Functions D Gaier On the Convergence of the Bieberbach Polynomials in Regions With Corners Gong Sheng Zheng Xuena Distortion Theorem for Biholomorphic Mappings in Transitive Domains I C O Kiselman Tangents of Plurisubharmonic Functions A Koranyi Hua Type Integrals Hypergeometric Functions and Symmetric Polynomials J Mitchell Two Sided L^1 Estimates for Szegő Kernels on Classical Domains I Satake On the Rational Structures of Symmetric Domains I Y T Siu Some Problems of Rigidity in Several Complex Variables S T Yau F Zheng On Projective Manifolds Covered by Space in \mathbb{C}^n

Number Theoretic Methods Shigeru Kanemitsu, Chaohua Jia, 2013-03-14 This volume contains the proceedings of the very successful second China Japan Seminar held in Iizuka Fukuoka Japan during March 12-16 2001 under the support of the Japan Society for the Promotion of Science JSPS and the National Science Foundation of China NSFC and some invited papers of eminent number theorists who visited Japan during 1999-2001 at the occasion of the Conference at the Research Institute of Mathematical Sciences RIMS Kyoto University The proceedings of the 1st China Japan Seminar held in September 1999 in Beijing has been published recently 2002 by Kluwer as DEVM 6 which also contains some invited papers The topics of that volume are however restricted to analytic number theory and many papers in this field are assembled In this volume we return to the lines of the previous one Number Theory and its Applications published as DEVM 2 by Kluwer in 1999 and uphold the spirit of presenting various topics in number theory and related areas with possible applications in a unified manner and this time in nearly a book form with a well prepared index We accomplish this task by collecting highly informative and readable survey papers including half survey type papers giving overlooking surveys of the hitherto

obtained results in up to the hour form with insight into the new developments which are then analytically continued to a collection of high standard research papers which are concerned with rather diversified areas and will give good insight into new researches in the new century

Rational Number Theory in the 20th Century Władysław Narkiewicz, 2011-09-02

The last one hundred years have seen many important achievements in the classical part of number theory After the proof of the Prime Number Theorem in 1896 a quick development of analytical tools led to the invention of various new methods like Brun's sieve method and the circle method of Hardy Littlewood and Ramanujan developments in topics such as prime and additive number theory and the solution of Fermat's problem Rational Number Theory in the 20th Century From PNT to FLT offers a short survey of 20th century developments in classical number theory documenting between the proof of the Prime Number Theorem and the proof of Fermat's Last Theorem The focus lays upon the part of number theory that deals with properties of integers and rational numbers Chapters are divided into five time periods which are then further divided into subject areas With the introduction of each new topic developments are followed through to the present day This book will appeal to graduate researchers and student in number theory however the presentation of main results without technicalities will make this accessible to anyone with an interest in the area

Emerging Applications of Number Theory Dennis A.

Hejhal, Joel Friedman, Martin C. Gutzwiller, Andrew M. Odlyzko, 2012-12-06 Most people tend to view number theory as the very paradigm of pure mathematics With the advent of computers however number theory has been finding an increasing number of applications in practical settings such as in cryptography random number generation coding theory and even concert hall acoustics Yet other applications are still emerging providing number theorists with some major new areas of opportunity The 1996 IMA summer program on Emerging Applications of Number Theory was aimed at stimulating further work with some of these newest and most attractive applications Concentration was on number theory's recent links with a wave phenomena in quantum mechanics more specifically quantum chaos and b graph theory especially expander graphs and related spectral theory This volume contains the contributed papers from that meeting and will be of interest to anyone intrigued by novel applications of modern number theoretical techniques

Dynamical Systems - Proceedings Of The International Conference In Honor Of Professor Liao Shantao Lan Wen, Yunping Jiang, 1999-12-16

This volume constitutes the proceedings of the International Conference on Dynamical Systems in Honor of Prof Liao Shantao 1920-97 The Third World Academy of Sciences awarded the first ever mathematics prize in 1985 to Prof Liao in recognition of his foundational work in differentiable dynamical systems and his work in periodic transformation of spheres The conference was held in Beijing in August 1998 There were about 90 participants and nearly 60 talks were delivered The topics covered include differentiable dynamics topological dynamics hamiltonian dynamics complex dynamics ergodic and stochastic dynamics and fractals theory Dynamical systems is a field with many difficult problems and techniques are being developed to deal with those problems This volume contains original studies of great mathematical depth and presents some of the

fascinating numerical experiments *The Hardy-Littlewood Method* , Eigenvalues of the Laplacian for Hecke Triangle Groups Dennis A. Hejhal,1992 Paper I is concerned with computational aspects of the Selberg trace formalism considering the usual type of eigenfunction and including an analysis of pseudo cusp forms and their residual effects Paper II examines the modular group $PSL(2, \mathbb{Z})$ as such groups have both a discrete and continuous spectrum This paper only examines the discrete side of the spectrum **Finite Fields: Theory, Applications, and Algorithms** Gary L. Mullen, Peter Jau-Shyong Shiue,1994 Because of their applications in so many diverse areas finite fields continue to play increasingly important roles in various branches of modern mathematics including number theory algebra and algebraic geometry as well as in computer science information theory statistics and engineering Computational and algorithmic aspects of finite field problems also continue to grow in importance This volume contains the refereed proceedings of a conference entitled Finite Fields Theory Applications and Algorithms held in August 1993 at the University of Nevada at Las Vegas Among the topics treated are theoretical aspects of finite fields coding theory cryptology combinatorial design theory and algorithms related to finite fields Also included is a list of open problems and conjectures This volume is an excellent reference for applied and research mathematicians as well as specialists and graduate students in information theory computer science and electrical engineering *Reviews in Number Theory, 1984-96* ,1997 These six volumes include approximately 20 000 reviews of items in number theory that appeared in Mathematical Reviews between 1984 and 1996 This is the third such set of volumes in number theory The first was edited by W J LeVeque and included reviews from 1940-1972 the second was edited by R K Guy and appeared in 1984 *Value Distribution Theory* Yang Lo,2013-04-17 It is well known that solving certain theoretical or practical problems often depends on exploring the behavior of the roots of an equation such as $1/J(z) = a$ where $J(z)$ is an entire or meromorphic function and a is a complex value It is especially important to investigate the number $n(r, J, a)$ of the roots of 1 and their distribution in a disk $|z| \leq r$ each root being counted with its multiplicity It was the research on such topics that raised the curtain on the theory of value distribution of entire or meromorphic functions In the last century the famous mathematician E Picard obtained the pathbreaking result Any non constant entire function $J(z)$ must take every finite complex value infinitely many times with at most one exception Later E Borel by introducing the concept of the order of an entire function gave the above result a more precise formulation as follows An entire function $J(z)$ of order $\rho > 0$ **Mathematical Constants** Steven R. Finch,2003-08-18 Steven Finch provides 136 essays each devoted to a mathematical constant or a class of constants from the well known to the highly exotic This book is helpful both to readers seeking information about a specific constant and to readers who desire a panoramic view of all constants coming from a particular field for example combinatorial enumeration or geometric optimization Unsolved problems appear virtually everywhere as well This work represents an outstanding scholarly attempt to bring together all significant mathematical constants in one place
