International Symposium On Adriamycin:

International Symposium on Adriamycin Stephen K. Carter, A. Di Marco, M. Ghione, I.H. Krakoff, G. Mathe, 2012-12-06 The impressive advances in all branches of medical science during the first half of this century with the discovery of many chemotherapeutic or immunogenic agents gave rise to brilliant achievements in the struggle against some infectious diseases and aroused in many scientists the wishful thought that drugs for cancer therapy would soon lead to additional great success. Notwithstanding ever increasing worldwide endeavors the major problems in prevention or treatment of neoplastic diseases are still unsolved. The approach to the resolution of these problems follows many different pathways. Basic research tries to cast light on the genetic and biochemical processes underlying cell division and differentiation as well as the interactions occurring between the cell and the oncogenic stimulus or between the neoplastic cells and the different body systems endowed with immunological reactivity. Another line of approach coherent with the classic basis of chemotherapy relies upon the search for new compounds selectively blocking the multiplication of the neoplastic cells. The remarkable progress made in treating human cancer as a result of these efforts has been until now ascribable chiefly to the accomplishment of the chemotherapeutic approach. Studies on the cytostatic activity of the anthracycline antibiotics carried out over many years eventually led the investigators of Farmitalia Milan Italy to discover and characterize some new compounds endowed with interesting chemotherapeutic properties against malignant neoplastic diseases. **Topics on cancer chemotherapy**

Kapoor, 2012-12-06 Within the broad field of oncology is a relatively small but important area of cardiac oncology. The scope of cardiac oncology will increase as we continue to develop expertise in the detection and management of cardiac problems. We intensify efforts to improve survival in patients who at an early time might have succumbed to advanced disease and a fragile cardiovascular system. With our aging population and the developing complexity of treatment modalities we now recognize that the cardiovascular system is a target of the adverse effects of chemotherapy, radiotherapy and cancer itself. The goal of this book is to present the scope of modern cardiac oncology as a growing discipline with sophisticated diagnostic testing and treatment modalities. The views of different specialists from different subspecialties are integrated to provide a multidisciplinary approach to the diagnosis, management and complications of cancer of the heart and related conditions. The rapidly growing interest in cardiac oncology has largely been advanced through the ready availability of two dimensional echocardiography, nuclear

magnetic resonance imaging angiocardiology and other imaging techniques This book is divided into four parts The first appraises cardiac tumors in detail and describes the distribution pathology noninvasive and invasive methods for testing diagnosis and treatment The surgical approach to cardiac tumors has been included It is a major advance that was essentially nonexistent a decade or so ago Novel surgical approaches have now been successful in many instances Catalog of Copyright Entries.
