Kayal,2008-08-22 Hardly a week passes without our learning of natural geologic disaster somewhere in the world be it a volcanic eruption landslide or destructive earthquake The prominent public notice given to such events is not only the result of better communications but also results from the increased impact of these events on a growing human population In recent years the population has increased greatly in regions of active tectonics Northern India and the surrounding areas are prime examples The consequence is that people and their man made structures are concentrated close to active faults and steep landslide prone terrains In just the past several years even moderate earthquakes with seismic magnitudes less than 6.5 have killed as many as 20 000 people precisely because these earthquakes occurred directly beneath population centres in central India The greater Himalayan region including the Ganges Plain is a prime example of the coexistence of a pronounced geological hazard with a growing human population Due in part to the spectacular topography the region has long attracted scientific investigations and may be considered as the birthplace of modern studies of earthquake hazards R D Oldham 1858-1936 of the Geological Survey of India played a

decades our understanding of the city worldwide has been revolutionized by three innovative theoretical concepts: globalisation, postcolonialism, and a radically contested notion of modernity. The idea and even the reality of the city has been extended out of the state and nation and repositioned in the larger global world. In this book, Anthony King brings together key essays written over this period, much of it dominated by debates about the world or global city. Challenging assumptions and silences behind these debates, King provides largely ignored historical and cultural dimensions to the understanding of world city formation as well as decline. Interdisciplinary and comparative, the essays address new ways of framing contemporary themes: the imperial and colonial origin of contemporary world and global cities actually existing; postcolonialism's claims about urban and cultural homogenisation and the role of architecture and built environment in that process. Also addressed are arguments about indigenous and exogenous perspectives, Eurocentrism, ways of framing vernacular architecture, and the global historical sociology of building types. Wide ranging and accessible, *Writing the Global City* provides essential historical contexts and theoretical frameworks for understanding contemporary urban and architectural debates. Extensive bibliographies will make it essential for teaching, reference, and research.
