**Microbial Technology for Sustainable E-waste Management** Prasenjit Debbarma, Saurabh Kumar, Deep Chandra Suyal, Ravindra Soni, 2023-03-01 This book besides discussing challenges and opportunities will reveal the microbe metal interactions and strategies for e waste remediation in different ecosystems It will unveil the recent biotechnological advancement and microbiological approach to sustainable biorecycling of e waste such as bioleaching for heavy metal extraction valorization of precious metal biodegradation of e plastic the role of the diverse microbial community in e waste remediation genetically engineered microbes for e waste management the importance of microbial exopolysaccharides in metal biosorption next generation technologies omics based technologies etc It also holds the promise to discuss the conservation utilization and cataloging indigenous microbes in e waste polluted niches and promising hybrid technology for sustainable e waste management Revolution in the area of information technology and communication is constantly evolving due to scientific research and development Concurrently the production of new electrical and electronic equipment also thus uplifting in this era of revolution These technological advancements certainly have problematic consequences which is the rise of huge amounts of electronic obsolesces or electronic waste e waste Improper management of both hazardous and nonhazardous substances of e waste led to a major concern in our digital society and environment Therefore a sustainable approach including microbial candidates to tackle e waste is the need of the hour Nevertheless the continuous demand for new generation gadgets and electronics set this high tech evolution to a new frontier in the last few years With this continuing trend of technological development e waste is expanding exponentially worldwide In the year of 2019 the worldwide generation of e waste was approximately 53.6 Mt of which only about 17.4% of e waste was collected and recycled and the other 82.6% was not even documented E waste contains various heterogeneous waste complexes such as metals 60% blends of many polymers 30% and halogenated compounds radioactive elements and other pollutants 10% respectively The sustainable efficient and economic management of e waste is thus a challenging task today and in the coming decades Conventional techniques such as the use of chemicals incineration and informal ways of e waste dismantling trigger serious health risks and contamination to the human population and environment respectively due

to the liberation of toxic and hazardous substances from the waste In this context bio candidates especially microorganisms could be sharp edged biological recycling tools to manage e waste sustainably As microbes are omnipresent and diverse in their physiology and functional aspects they offer a wide range of bioremediation Glocalized Solutions for Sustainability in Manufacturing Jürgen Hesselbach, Christoph Herrmann, 2011-03-19 The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 continues a long tradition of scientific meetings focusing on the exchange of industrial and academic knowledge and experiences in life cycle assessment product development sustainable manufacturing and end of life management The theme Glocalized Solutions for Sustainability in Manufacturing addresses the need for engineers to develop solutions which have the potential to address global challenges by providing products services and processes taking into account local capabilities and constraints to achieve an economically socially and environmentally sustainable society in a global perspective Glocalized Solutions for Sustainability in Manufacturing do not only involve products or services that are changed for a local market by simple substitution or the omitting of functions Products and services need to be addressed that ensure a high standard of living everywhere Resources required for manufacturing and use of such products are limited and not evenly distributed in the world Locally available resources local capabilities as well as local constraints have to be drivers for product and process innovations with respect to the entire life cycle The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 serves as a platform for the discussion of the resulting challenges and the collaborative development of new scientific ideas *Cases on Green Energy and Sustainable Development* Yang, Peter, 2019-07-26 Despite the urgent need for action there is a widespread lack of understanding of the benefits of using green energy sources for not only reducing carbon emissions and climate change but also for growing a sustainable economy and society Future citizens of the world face increasing sustainability issues and need to be better prepared for energy transformation and sustainable future economic development *Cases on Green Energy and Sustainable Development* is a critical research book that focuses on the important role renewable energy and energy efficiency play in energy transition and sustainable development and covers economic and promotion policies of major renewable energy and energy efficiency technologies Highlighting a wide range of topics such as economics energy storage and transportation technologies this book is ideal for environmentalists academicians researchers engineers policymakers and students *Handbook of Research on Waste Diversion and Minimization Technologies for the Industrial Sector* Rathoure, Ashok K., 2021-01-08 Due to various issues in the world including rapid urbanization and industrial processes waste generation has reached levels that are becoming detrimental to the environment and the global population Waste management has remained a challenging issue for many professional sectors as it is directly linked to an organization s performance however the implementation of efficient and cost effective waste minimization plans is the first step in improving the global environment Innovative technologies in waste management are emerging and can help professionals looking to implement more efficient methods of pollution control The

Handbook of Research on Waste Diversion and Minimization Technologies for the Industrial Sector is a pivotal reference source that provides vital research on the application of modern pollution control methodologies in industrialized environments. While highlighting topics such as life cycle assessment, bioremediation, and thermal waste treatment, this publication explores environmental risk reduction scenarios as well as sustainable waste collecting solutions. This book is ideally designed for researchers, industrialists, environmentalists, practitioners, policymakers, scientists, students, and academicians seeking current research on innovative advancements in waste minimization techniques.
