Interpretation Of Negative Epidemiological Evidence For Carcinogenicity:

Interpretation of Negative Epidemiological Evidence for Carcinogenicity Nicholas J. Wald, Richard Doll, 1985 This volume consists of the proceedings of a symposium held at Oxford concerning the weight to be given to negative epidemiological evidence in identifying agents that are potentially carcinogenic to humans A number of highly pertinent examples are studied including carcinogens that have been identified experimentally but either have important roles in society such as oral contraceptives or are too expensive to remove from the environment such as nitrate in drinking water The relative weight given to experimental and epidemiologic results is fully discussed especially in terms of social and economic consequences This is a trail blazing volume of great importance to anyone interested in assessment of human risk *Interpretation of Negative Epidemiological Evidence for Carcinogenicity* N. Toxicology Program (NTP) (NIH), 2011-10-08 The Report on Carcinogens RoC is a congressionally mandated science based public health document that identifies and discusses agents substances mixtures or exposure circumstances hereinafter referred to as substances that may pose a hazard to human health by virtue of their carcinogenicity For each

listed substance the report contains a substance profile which provides information on 1 the listing status 2 cancer studies in humans and animals 3 studies of genotoxicity ability to damage genes and biologic mechanisms 4 the potential for human exposure to these substances and 5 Federal regulations to limit exposures Eight substances have been added to this 12th ed of the report which now includes 240 listings The industrial chemical formaldehyde and a botanical known as aristolochic acids are listed as known human carcinogens Six other substances captafol cobalt tungsten carbide in powder or hard metal form certain inhalable glass wool fibers o nitrotoluene riddelliine and styrene are added as substances that are reasonably anticipated to be human carcinogens Figures This is a print on demand report **Carcinogenicity** Kirk T.

broad interest in occupational cancer epidemiology Among the former are state of the art reviews emphasizing recent data and new and innovative analytic approaches The substantive topics include discussion of cancer risks from exposure to complex organic mixtures asbestos and man made fibers herbicides radon and electromagnetic fields Risk assessment exposure assessment and analysis of occupational cohort studies are examples of the methodologic issues addressed This book provides basic information and opens perspectives on new areas of research In organizing our symposium we were greatly assisted by Betty Fata and Kim Rust of Venue West Conference Ltd We appreciate the financial support received from the following Cancer Control Agency of British Columbia Alcan Aluminium Ltd National Health Research Development Program Workers Compensation Board of British Columbia Purdue Frederick Inc Rhone Poulenc Pharma Inc London Drugs Ltd Ciba Geigy Canada Ltd Bristol Myers Pharmaceutical Group Schering Canada Inc Hoffmann La Roche Ltd Sterling Drug Ltd Parke Davis Canada Inc Beecham Laboratories Pfizer Canada Inc Roussel Canada Inc Environmental Health Perspectives ,1993
