Interpreting Nature Cultural Constructions Of The Environment:

Interpreting Nature I. G. Simmons, 2013-01-11 Human society has constructed many varied notions of the environment. Scientific information about the environment is often seen as the only worthwhile knowledge. This ignores the complexities created by interaction between people and the environment. Idealist thinking argues that everything we know is based on a construct of our minds and that all is possible. Can both be correct and true? *Interpreting Nature* explores the position of humanity in the environment from the principle that the models we construct are imperfect and can only be provisional. Having examined the way in which the natural sciences have interrogated nature, the types of data produced and what they mean to us, this looks at the environment within philosophy and ethics, the social sciences and the arts, and analyses their role in the formation of environmental cognition. *Interpreting Nature: Cultural Constructions of the Environment* I.G. Simmons, 1993 *Cultural Landscapes and Environmental Change* Lesley Head, 2017-09-25 Cultural landscapes are usually understood within physical geography as those transformed by human action. As human influence on the earth increases, advances in palaeocological reconstruction have also allowed for new interpretations of the evidence for the earliest human impacts on the environment. It is essential that such evidence is examined in the context of modern trends in social sciences and humanities. This stimulating new book argues that convergence of the two approaches can provide a more holistic understanding of long term physical and human processes. Split into two major sections, this book attempts to bridge the gap between the sciences and humanities. The first section provides an analysis of the methodological tools employed in examining processes of environmental change. Empirical research in the fields of palaeocology and Quaternary studies is combined with the latest theoretical views of nature and landscape occurring in cultural geography, archaeology and anthropology. The author examines the way in which environmental management decisions are made. The book then moves on to discuss the relevance of this perspective to contemporary issues through a wide variety of international case studies, including World Heritage protection, landscape preservation, indigenous people and cultural tourism. *IBSS: Sociology: 1993 Vol 43* International Committee for Social Science Information and Documentation, 1994 This bibliography lists the most important works published in sociology in 1993. Renowned for its international coverage and rigorous selection procedures, the IBSS provides researchers and librarians with the most comprehensive and scholarly bibliographic service available in the social sciences. The IBSS is compiled by the British Library of Political and Economic Science at the London School of Economics, one of the world's leading social science institutions. Published annually, the IBSS is available in four subject areas: anthropology, economics, political science and sociology. **Partnering for the Environment** Eric C. Poncelet, 2004-02-10 Environmental policy domains are increasingly adopting strategies of cooperation over those of conflict. Decision making processes founded upon collaboration and public participation are receiving more attention and favor, and in turn engendering multistakeholder environmental partnerships. In his thoughtful analysis, Eric C. Poncelet seeks to illuminate the

mechanics of these partnerships especially at the level of social interaction Drawing on ethnographic research performed with four case study partnerships in the European Union and the United States Poncelet focuses on the diverging ways that stakeholders think talk and conventionally act with regard to the environmental issues at stake Also explored are the roles of environmental partnerships as sites of personal transformation where participants and their perspectives conceptualizations and expectations can and do change Partnering for the Environment concludes by examining the broader implications of multistakeholder partnerships for the future of environmental decision making and suggests ways by which these partnerships may be more effectively used and managed

Tourism, Development and Growth John J. Pigram, Salah Wahab, 2005-10-05 Distinguishing between sustainable development and sustainable tourism the authors examine whether and in what form tourism can contribute to sustainable development and growth Focusing on different types of tourism appropriate to particular situations the team of leading contributors draws on examples from around the world Canada USA Spain Belgium UK Australia to explore tourism s contribution to the economic social political and environmental advancement of developing countries and the importance of tourism in industrialised nations This book examines the new policies and initiatives established by both the private sector and the state to pursue sustainable tourism growth and identifies the opportunities and challenges inherent in achieving it

Our Common Dwelling Lance Newman, 2005-05-12 OurCommonDwelling explores why America s first literary circle turned to nature in the 1830s and 40s When the New England Transcendentalists spiritualized nature they were reacting to intense class conflict in the region s industrializing cities Their goal was to find a secular foundation for their social authority as an intellectual elite New England Transcendentalism engages with works by William Wordsworth Henry David Thoreau Ralph Waldo Emerson Margaret Fuller Nathaniel Hawthorne and others The works of these great authors interpreted in historical context show that both environmental exploitation and conscious love of nature co evolved as part of the historical development of American capitalism

Eden on the Charles Michael Rawson, 2014-10-06 Drinking a glass of tap water strolling in a park hopping a train for the suburbs some aspects of city life are so familiar that we don t think twice about them But such simple actions are structured by complex relationships with our natural world The contours of these relationships social cultural political economic and legal were established during America s first great period of urbanization in the nineteenth century and Boston one of the earliest cities in America often led the nation in designing them A richly textured cultural and social history of the development of nineteenth century Boston this book provides a new environmental perspective on the creation of America s first cities Eden on the Charles explores how Bostonians channeled country lakes through miles of pipeline to provide clean water dredged the ocean to deepen the harbor filled tidal flats and covered the peninsula with houses shops and factories and created a metropolitan system of parks and greenways facilitating the conversion of fields into suburbs The book shows how in Boston different class and ethnic groups brought rival ideas of nature and competing visions of a city upon a hill to the

process of urbanization and were forced to conform their goals to the realities of Boston's distinctive natural setting. The outcomes of their battles for control over the city's development were ultimately recorded in the very fabric of Boston itself. In Boston's history we find the seeds of the environmental relationships that for better or worse have defined urban America to this day.

Society and Exploitation Through Nature Martin Phillips, Tim Mighall, 2014-06-06 *Society and Exploitation Through Nature* offers an integrated approach to the environment linking the philosophical, social and physical sciences to environmental problems and issues. The text covers three main themes: exploitation of nature and society, the limits of exploitation through sustainability, and managing environmental problems. These themes are illustrated throughout the book with global case studies.

The Environment in Anthropology Nora Haenn, Richard Wilk, 2006 Presenting ecology and current environmental studies from an anthropological point of view, this book gives readers a strong intellectual foundation as well as offering practical tools for solving environmental problems.

Environment and Tourism, Nature of the Miracle Years Sandra Chaney, 2008 After 1945 those responsible for conservation in Germany resumed their work with a relatively high degree of continuity as far as laws and personnel were concerned. Yet conservationists soon found they had little choice but to modernize their views and practices in the challenging postwar context. Forced to change by necessity, those involved in state-sponsored conservation institutionalized and professionalized their efforts while several private groups became more confrontational in their message and tactics. Through their steady and often conservative presence within the mainstream of West German society, conservationists ensured that by 1970 the map of the country was dotted with hundreds of reserves, dozens of nature parks, and one national park. In doing so, they assured themselves a strong position to participate in rather than be excluded from the left-leaning environmental movement of the 1970s.

International Environmental Law, Policy, and Ethics Alexander Gillespie, 2014-08-21 This second edition of *International Environmental Law: Policy and Ethics* revises and expands this groundbreaking study into the question of why the environment is protected in the international arena. This question is rarely asked because it is assumed that each member of the international community wants to achieve the same ends. However, in his innovative study of international environmental ethics, Alexander Gillespie explodes this myth. He shows how nations, like individuals, create environmental laws and policies which are continually inviting failure as such laws can often be riddled with inconsistencies and be ultimately contradictory in purpose. Specifically, he seeks a nexus between the reasons why nations protect the environment, how these reasons are reflected in law and policy, and what complications arise from these choices. This book takes account of the numerous developments in international environmental law and policy that have taken place since the publication of the first edition, most notably at the 2002 World Summit on Sustainable Development and the 2012 Rio+20 United Nations Conference on Sustainable Development. Furthermore, it addresses recent debates on the economic value of nature and the problems of the illegal trade in species and toxic waste. The cultural context has also been considerably advanced in the areas of both intangible and tangible heritage.

with increasing attention being given to conservation wildlife management and the notion of protected areas The book investigates the ways in which progress has been made regarding humane trapping and killing of animals and how in contrast the Great Apes initiative and similar work with whales have failed Finally the book addresses the fact that while the notion of ecosystem management has been embraced by a number of environmental regimes it has thus far failed as an international philosophy

Third World Political Ecology Sinead Bailey, Raymond Bryant, 2005-08-08 By drawing on examples from throughout the Third World Bryant and Bailey explain the development and characteristics of environmental problems that plague parts of Asia Africa and Latin America and their political and economic bases

Environmental Movements in Asia Arne Kalland, Gerard Persoon, 2013-10-31 This volume paints a general picture of the environmental situation in Asia backing it up with several case studies Two major points are made in this general picture The first is that environmental campaigns in Asia tend to have a local focus they react to very concrete problems in the immediate neighbourhood and as such usually people are engaged in a cause for practical rather than idealistic reasons Such can be seen in case studies from the volume dealing with campaigns against logging and tree plantations tourist facilities and factories and in support or defence of nature reserves This pattern is in marked contrast to the profile of the most successful Western movements in terms of fund raising at least for whom the focus is on perceived problems in distant parts of the world The second point is evidence in several of the case studies in the volume namely that environmental campaigns cannot be understood in terms of environmental issues alone Rather they should be regarded as a form of cultural critique and frequently are a form of

political resistance in situations where open political action is too risky *Global Sustainability* Peter A. Wilderer, Edward D. Schroeder, Horst Kopp, 2006-01-24 This first book to focus on cultural diversity as a key element of sustainable development in the context of science and engineering provides cross disciplinary information and assistance in understanding our world in transition As such it furnishes the global scientific community and decision makers in governmental and non governmental institutions as well as in industry with much needed information on how the various factors affecting sustainable development including culture depend on and interfere with each other Featuring a contribution by the President of the Club of Rome HRH Prince El Hassan bin Talal this is vital reading for all natural scientists engineers economists ecologists environmental organizations and consultants
