Unsolved Mysteries (& Their "Solutions") Carole Marsh,1994 **South Dakota's Unsolved Mysteries (& Their "Solutions")** Carole Marsh,1994 Spin Wave Technology George J. Bugh,2002 This is a book of informal research papers written by George J Bugh while investigating claims by many inventors and researchers who have built unusual electromagnetic devices said to produce anomalous energy output and even electrogravity effects Mr Bugh is a senior staff aerospace electronics engineer with over 20 years experience He spent the last 7 years studying these claims to determine if any could be valid and if so then to determine the source of the anomalous energy and the electrogravity effects According to classical electrodynamics all electrically charged particles like quarks and electrons should radiate away energy from gyroscopic precessional motions and orbital motions Bugh has come to the conclusion that they really do However all particles are also absorbing just as much energy from all other radiating particles The continuously absorbed energy equals the radiated energy and applies forces that move similar type particles into harmonious precessional motions with each other This results in a sea of electromagnetic standing waves among all matter in the universe It is this sea of standing waves rather than quantum probability waves that best account for the wave like nature of matter Particles move to quantized

states because of electromagnetic forces that keep particle motions synchronized with this sea of standing waves This is an interaction among all matter that Ernst Mach alluded to as necessary to cause matter's characteristic of inertia Einstein called this Mach's Principle Einstein studied Mach's ideas while developing his theory of General Relativity Using common sense and classical electrodynamics Bugh explains how these particle spin interactions are possible even among compensating spins Technology advancements are possible based on these particle spin interactions
