Mathematical Methods for Engineering Applications Deolinda M. L. D. Rasteiro, Fatih Yilmaz, Araceli Queiruga-Dios, Jesús Martín Vaquero, Ion Mierlus Mazilu, 2025-08-02 This proceedings volume compiles papers presented at the 5th International Conference on Mathematics and its Applications in Science and Engineering ICMASE 2024 held on September 16-18, 2024, by the Polytechnic Institute of Coimbra, Portugal. The ICMASE 2024 was a hybrid conference featuring both in-person and virtual attendance. The works in this volume explore recent developments in the application of mathematics to science and engineering, focusing on mathematical and computational modeling of real-world problems. Topics include algebra and number theory, analysis, geometry, statistics, computational and discrete mathematics, as well as their intersections with engineering applications. Additionally, educational aspects of mathematics in engineering fields are addressed. This volume is intended for researchers, practitioners, and graduate students, particularly those interested in advanced methods for applying mathematics across various contexts and fields.

Optimization and Decision Science: Methodologies and Applications Antonio Sforza, Claudio Sterle, 2017-11-03 This proceedings volume highlights the state-of-the-art knowledge related to optimization, decision science, and problem-solving methods, as well as their application in industrial and territorial systems. It includes contributions tackling these themes using models and methods based on continuous and discrete optimization, network optimization, simulation, and system dynamics, heuristics, metaheuristics, artificial intelligence, analytics, and also multiple criteria decision-making. The number and the increasing size of the problems arising in real life require mathematical models and solution methods adequate to their complexity. There has also been increasing research interest in Big Data and related challenges. These challenges can be recognized in many fields and systems which have a significant impact on our way of living: design, management, and control of industrial production of goods and services, transportation planning, and traffic management in urban and regional areas, energy production and exploitation, natural resources and environment protection, homeland security, and critical infrastructure protection, development of advanced information and communication technologies. The chapters in this book examine how to deal with new and emerging practical problems arising in these different fields through the presented methodologies and their applications. The chapter topics are applicable for researchers and practitioners working in these areas but also for the operations research community. The contributions were presented during the international conference Optimization and Decision Science ODS2017 held at Hilton Sorrento Palace Conference Center, Sorrento, Italy, September 4-7, 2017. ODS 2017 was organized by AIRO (Italian Operations Research Society) in cooperation with DIETI (Department of Electrical Engineering and Information Technology) of University Federico II of Naples.

Quantitative Biosciences Joshua S. Weitz, 2024-03-05 A hands-on approach to quantitative reasoning in the life sciences. Quantitative Biosciences establishes the quantitative principles of how living systems work across scales, drawing on

classic and modern discoveries to present a case study approach that links mechanisms models and measurements Each case study is organized around a central question in the life sciences Are mutations dependent on selection How do cells respond to fluctuating signals in the environment How do organisms move in flocks given local sensing How does the size of an epidemic depend on its initial speed of spread Each question provides the basis for introducing landmark advances in the life sciences while teaching students whether from the life sciences physics computational sciences engineering or mathematics how to reason quantitatively about living systems given uncertainty Draws on real world case studies in molecular and cellular biosciences organismal behavior and physiology and populations and ecological communities Stand alone lab guides available in Python R and MATLAB help students move from learning in the classroom to doing research in practice Homework exercises build on the lab guides emphasizing computational model development and analysis rather than pencil and paper derivations Suitable for capstone undergraduate classes foundational graduate classes or as part of interdisciplinary courses for students from quantitative backgrounds Can be used as part of conventional flipped or hybrid instruction formats Additional materials available to instructors including lesson plans and homework solutions
