## **Facets Of Modern Biogeochemistry Festschrift For Et Degens:**

Facets of Modern Biogeochemistry Egon T. Degens, 1990-02-20 Scientists who have had the opportunity of being associated with Professor Egon T Degens to whom this Festschrift is devoted have been influenced by his ideas on subjects as varied as extraterrestrial organic matter origin of life evolution of organisms isotope biogeochemistry down to more imminent ones such as the carbon cycle and its implications on climate This variety is also reflected in the papers in the present volume contributed by colleagues who have known Egon or have worked with him Egon Theodor Degens was born on April 16 1928 at Inden Germany and had his education in Bonn and Wiirzburg After a stint at the Pennsylvania State University he returned to Wiirzburg to help set up one of the first organic geochemistry laboratories in the world This laboratory was the breeding ground for some of the eminent organic geochemists at work today Later he joined the California Institute of Technology and began his work on stable carbon isotopes and later on biogeochemical compounds in natural waters From California he moved on to the east coast which led to yet another productive phase at the Woods Hole Oceanographic Institution He was instrumental in the pioneering work carried out by the Woods Hole scientists in the Black Sea which is the largest anoxic basin in the world and in the Red Sea where the first hydrothermal ore deposits on the seafloor were discovered

*The Precambrian Earth* P.G. Eriksson, Wladyslaw Altermann, D.R. Nelson, W.U. Mueller, O. Catuneanu, Octavian Catuneanu, 2004-03-04 In this book the editors strive to cover all primary i e non applied topics in Precambrian geology in a non partisan way by using a large team of international authors to present their datasets and highly divergent viewpoints The chapters address celestial origins of Earth and succeeding extraterrestrial impact events generation of continental crust and the greenstone granite debate the interaction of mantle plumes and plate tectonics over Precambrian time Precambrian volcanism emphasising komatiite research evolution and models for Earth s hydrosphere and atmosphere evolution of life and its influence on Precambrian ocean chemistry and chemical sedimentation sedimentation through Precambrian time the application of sequence stratigraphy to the Precambrian rock record Each topic is introduced and a non partisan closing commentary provided at the end of each chapter The final chapter blends the major geological events and rates at which important processes occurred into a synthesis which postulates a number of event clusters in the Precambrian when significant changes occurred in many natural systems and geological environments Also available in paperback ISBN 0 444 51509 7

The Ecology of the Indonesian Seas Tomas Tomascik, 1997 Located between the Pacific and Indian Oceans and between the Asian and Australian continents the seas of the Indonesian Archipelago have a significant role in global weather patterns and oceanic circulation The dynamic interplay between geological physical chemical and biological processes past and present has given rise to one of the most diverse marine regions on the planet Using maps and numerous illustrations This text describes the complex coastal and marine ecosystems of the region in detail Discussion of development resource use and ecologically sustainable management plans is also incorporated

*Geochemistry of Organic*

*Matter in River-Sea Systems* V.E. Artemyev, 2012-12-06 One of the basic concepts of ocean biogeochemistry is that of an ocean with extremely active boundary zones and separation boundaries of extensive biochemical interactions The areas of these zones are characterized by a sharp decrease of element migration intensity and consequently the decrease in their concentrations gave the boundaries for the naming of the geochemical barriers Perelman 1972 For the purposes of biogeochemistry the most important ones are the boundaries of separation between river sea ocean atmosphere and water ground Lisitzin 1983 The most complicated of them is the river sea boundary where the biogeochemical processes are the most active and complicated Monin and Romankevich 1979 1984 The necessity of studying organic matter in rivers mouth regions and adjoining sea aquatories has been repeatedly pointed out by V.I. Vernadsky 1934 1960 who noted both the importance of registration of solid and liquid run off of rivers coming into the sea and the quality and the character of those elements which are washed down into the sea emphasizing that wash down of organic substances into the sea is of great value The interest in studying organic matter in natural waters including river and sea waters has grown considerably over the last 30 years During this period essential material was collected on the content and composition of organic matter in various types of river waters of the USSR and this was published in papers by B.A. Scopintzev A.D. Semenov M.V.

#### **Earth System Analysis**

Hans-Joachim Schellnhuber, Volker Wenzel, 2012-12-06 As humanity approaches the 3rd millennium the sustainability of our present way of life becomes more and more questionable New paradigms for the long term coevolution of nature and civilization are urgently needed in order to avoid intolerable and irreversible modifications of our planetary environment Earth System Analysis is a new scientific enterprise that tries to perceive the earth as a whole a unique system which is to be analyzed with methods ranging from nonlinear dynamics to macroeconomic modelling This book resulting from an international symposium organized by the Potsdam Institute has 2 aims first to integrate contributions from leading researchers and scholars from around the world to provide a multifaceted perspective of what Earth System Analysis is all about and second to outline the scope of the scientific challenge and elaborate the general formalism for a well defined transdisciplinary discourse on this most fascinating issue

#### **Sedimentary Organic Matter**

R. Tyson, 2012-12-06 A sound understanding of the global carbon cycle requires an appreciation of the various physico chemical and biological processes that determine the production distribution deposition and diagenesis of organic matter in the natural environment This book is a comprehensive interdisciplinary synthesis of this information coupled with an organic facies approach based on data from both microscopy and bulk organic geochemistry

#### **Sediments and Environmental Geochemistry**

Dietrich Helling, Peter Rothe, Ulrich Förstner, Peter Stoffers, 2012-12-06 Sediments and Environmental Geochemistry is dedicated to Professor German M. Müller on the occasion of his 60th birthday The individual articles written by outstanding scientists cover a wide range of subjects indicating the broad spectrum of his interests The main topics are Carbonate and Evaporite Petrology Petroleum Formation and Exploration Environmental Geochemistry Coal Petrography Data Bases in Geosciences and

Volcanology      **Handbook of Sea-Level Research** Ian Shennan, Antony J. Long, Benjamin P. Horton, 2015-05-04 Measuring sea level change be that rise or fall is one of the most pressing scientific goals of our time and requires robust scientific approaches and techniques This Handbook aims to provide a practical guide to readers interested in this challenge from the initial design of research approaches through to the practical issues of data collection and interpretation from a diverse range of coastal environments Building on thirty years of international research the Handbook comprises 38 chapters that are authored by leading experts from around the world The Handbook will be an important resource to scientists interested and involved in understanding sea level changes across a broad range of disciplines policy makers wanting to appreciate our current state of knowledge of sea level change over different timescales and many teachers at the university level as well as advanced level undergraduates and postgraduate research students wanting to learn more about sea level change Additional resources for this book can be found at [www.wiley.com/go/shennan/sealevel](http://www.wiley.com/go/shennan/sealevel)

*Ecology of the Indonesian Seas Part 2* Tomas Tomascik, Anmarie J. Mah, 2013-02-05 The Ecology of the Indonesian Seas distills for the first time the information found in thousands of scholarly works relevant to an understanding of the sustainable use of marine and coastal resources in these islands many of them available up to now only in Dutch German or Indonesian It is an invaluable tool for government planners resource managers ecologists university students scuba divers and all those with an interest in the sea The second volume discusses the origins formation and distribution of various reef types in the Indonesian Archipelago and provides new estimates on their extent The second volume also provides a review of the ecology of Indonesian seagrass mangrove and open ocean ecosystems The chapter on marine biodiversity focuses on a number of marine and coastal habitats and threatened marine organisms The final two chapters discuss what recent effects the human race has had on marine resources and what we can do to protect and preserve our marine and coastal zones for generations to come

Circulation and Contaminant Fluxes in the North Sea Jürgen Sündermann, 2012-12-06 In this publication you will find a comprehensive data set of the North Sea ecosystem including the distribution and the fate of contaminants their transport paths and their analysis by means of numerical models This book presents the results of the interdisciplinary German research project ZISCH Zirkulation und Schadstoffumsatz in der Nordsee encompassing oceanographers meteorologists marine biologists and chemists

**The Deposition of Organic-carbon-rich Sediments** Nicholas Bennett Harris, 2005 Depositional models for organic carbon rich sediments have been the subjects of both great interest and great controversy for many years These sediments serve as the ultimate source of virtually all oil and gas They also represent the interface between biological and geological processes and provide critical evidence for the state of the atmosphere and oceans Yet despite their importance and decades of research the origin of these sediments remains the source of vigorous disagreement The twelve papers in this volume represent the cutting edge of research in this topic They explore the origin of organic carbon rich sediments through a variety of techniques including sedimentology geochemistry paleontology and computer modeling All papers take

multidisciplinary approaches to the topic and together they demonstrate the complex interconnected processes that trigger the deposition of organic carbon This book will appeal to geoscientists in many disciplines including explorers for petroleum who need models for source rock deposition organic and inorganic geochemists who study processes in water and sediment sedimentologists who interpret ancient deposition environments and climatologists and oceanographers who reconstruct the behavior of the ancient atmosphere and oceans     *Biogeochemistry of Major World Rivers* Egon T. Degens,Stephan Kempe,Jeffrey E. Richey,1991-03-06 This extract of the SCOPE UNEP project Transport of Carbon and Minerals in Major World Rivers Lakes and Estuaries provides a comprehensive overview of the biogeochemistry of major rivers and their role in the biogeochemical cycles of its life supporting animals for the first time Rivers are viewed by continent or under certain scientific aspects Concrete data on the chemistry and fluxes of major world rivers are given in addition to a more theoretical approach to the riverine system     **Annals of the Geological Survey of Egypt** Misāḥah al-Jiyūlūjīyah al-Miṣrīyah,2004
