Moore, 2012-12-02 Today atomic emission spectroscopy is a well established analytical technique of widespread application a technique that no one involved or interested in chemical analysis can afford to ignore The present book was written to meet the need for an extensive introduction to this technique It is written in an easy to understand way and is mainly aimed at tertiary level students at universities and colleges and at newcomers to the field The book prepares the reader for the study of more advanced texts and the increasing number of research papers published in this area It will not only be of great use to the analytical chemist but will appeal to specialists in other fields of chemistry who need an understanding of analytical techniques The book introduces the analytical techniques of atomic emission spectroscopy outlining the principles history and applications It discusses spectrography excitation sources inductively coupled plasmas instrumentation nebulization sample dissolution and introduction accuracy and precision internal standardization plasma optimization line selection and interferences and inductively coupled plasma mass spectroscopy Understanding of the material is aided by 128 illustrations including 11 photographs References follow each chapter and an extensive index completes this useful work

Handbook of Inductively Coupled Plasma Spectrometry Michael Thompson, 2012-12-06 The first edition of our Handbook was written in 1983 In the preface to the first edition we noted the rapid development of inductively coupled plasma atomic emission spectrometry and its considerable potential for elemental analysis The intervening five years have seen a substantial growth in ICP applications much has happened and this is an appropriate time to present a revised edition The basic approach of the book remains the same This is a handbook addressed to the user of the technique who seeks direct practical advice A concise summary of the technique is attempted Detailed theoretical treatment of the background to the method is not covered We have however thoroughly revised much of the text and new chapters have been added These reflect the changes and progress in recent years We are grateful to Mr Stephen Walton Dr Gwendy Hall and London and Scandinavian Metallurgical Co Ltd for their contributions Chapter 3 Instrumentation has been rewritten by Mr Walton the new Chapter on ICP mass spectrometry has been written by Dr Hall and London and Scandinavian provided much of the information for the chapter on metals analysis by ICP AES These chapters have been integrated into the book and a conscious effort has been made to retain the unity of style within the book New material has been added elsewhere in the book archaeological materials are considered pre concentration methods and chemometrics covered more fully
