International Securities Law Marc Steinberg, 1999-08-12 The globalisation of the securities markets, rapid technological advancement, the perpetration of widespread cross border fraud and the proliferation of emerging capital markets have made international financial law an increasingly important area of regulation, practice and research. Its significance will continue to grow in the 21st century making the advent of a book focusing on developments in international securities law extremely timely. Key topics covered in this book include disclosure requirements, insider trading, regulation, global offerings, transnational regulatory co-operation, the role of the International Organization of Securities Commissions, IOSCO memoranda of understanding and emerging capital markets. Discussion of these issues is supported by examination of the law and policy in numerous countries including developed and emerging capital markets. The author makes detailed analysis of applicable legal principles with regard to a wide range of topics, discusses proposed standards for law reform and makes recommendations to enhance international cooperation. *International Securities Law and Regulation [2009] - III* Dennis Campbell, 2009-09-14 2009 RELEASE International Securities Law and Regulation a three volume set with more than 1 600 pages examines the regulation of securities trading in jurisdictions in North and South America, Europe and Asia and the Pacific. the International Securities and Derivatives Markets ,2002 International Contracts and National Economic Regulation:Dispute Resolution Through International Commercial Arbitration Mahmood Bagheri,2000-12-06 The growth of national economic regulation and the process of globalisation increasingly expose international transactions to an array of regulations from different jurisdictions These developments often contribute to widespread international contractual failures when parties claim the incompatibility of their contractual obligations with regulatory laws The author challenges conventional means of dispute resolution and argues for an interdisciplinary approach whereby disciplines such as international economic law conflict of laws contract law and economic regulations are functionally united to resolve

international and multifaceted regulatory disputes He identifies the normative foundation of contract law as an important determinant in this process contending that contract law is essentially neutral and underpinned by the concept of corrective justice while economic regulations are mainly prompted by distributive justice Applying this corrective distributive justice dichotomy to international contracts the author critically assesses major conflict of laws approaches such as proper law the Rome Convention and governmental interest analysis which could disregard either public interest or private rights The author taking these theories into account proposes an alternative two dimensional interest analysis approach He tests the viability of this approach with reference to arbitral awards and court decisions in various jurisdictions and concludes that it uniquely fits into the structure of international commercial arbitration In adopting this approach arbitrators would take into account both corrective and distributive justice and to the extent that corrective justice prevails would be able to avert a total failure of the contract
