The Concept of State Jurisdiction in International Space Law Imre Anthony Csabafi, 2012-12-06. Dr Csabafi in his clearly and concisely written book sets out to confront the most pressing jurisdictional problems arising from the exploration and use of outer space problems which the authors of the Outer Space Treaty of 27th January 1967 have not attempted to solve. He has recognized that in view of the lack of sufficient knowledge of technological capabilities present and anticipated of the utilization of outer space and its political, economic and social implications, the time is not yet ripe for the elaboration of specific rules to govern most of the highly complex issues in this context. Apart from the lack of sufficient knowledge and experience, the achievement of a consensus on rules regarding jurisdiction in outer space is further hampered by the strongly divergent interpretations of the fundamental principles of the Outer Space Treaty, namely the principle of freedom of outer space for exploration and use and the principle of non-appropriation of outer space. In various parts of his study, Dr Csabafi has, on the basis of a thorough study of the preparatory work of the Outer Space Treaty, expressed his views on the meaning of these principles.

An Assessment Framework for Compliance with International Space Law and Norms David Lindgren, 2020-07-27. This book proposes a framework for assessing countries' levels of compliance with international space law and norms. It begins by exploring the development of two movements: the evidence-based policymaking and programming movement and the rise of ratings and rankings research and their growth across various disciplines. The analysis suggests that such efforts are useful in gauging the behavior of countries in space according to how well they adhere to existing space law and norms. To date, there is no comprehensive, periodic and systematic measure of countries' efforts to comply with space law and norms; this work endeavors to fill that gap by offering a framework in which to assess compliance. Applying the framework results in five possible ratings that a country may be assigned, ranging from highly compliant to non-compliant. Ideally, the proposed framework can be used to promote compliance and with it, space security and sustainability.

Pioneers of Space Law Stephan Hobe, 2013-12-09. International space law is less than 50 years old. Although the work on the codification of space law started in the late 1950s, the Outer Space Treaty was only adopted in January 1967. However, much earlier than that, even as early as 1932, the first ideas about legal rules for human activities in outer space were being considered. Very little is known about these early drafts and proposals and the pioneering work of early scholars in the field.

remains relatively unknown This volume seeks to redress this by analysing the biographies and contributions to international space law of eleven such early pioneers whose ground breaking and original work helped to develop the field in important ways The collection starts in the 1930 s with the Czech author Vladimir Mandl and dwells at length on the 1950 s the early time of space flight The section on each pioneer is written by different members of the International Institute of Space Law making this a lively fascinating and unique collection of essays of interest to the whole community of space lawyers
