Madhavji, Juan Fernandez-Ramil, Dewayne Perry, 2006-08-30 Evolution of software has long been recognized as one of the most problematic and challenging areas in the field of software engineering as evidenced by the high often up to 60 80% life cycle costs attributed to this activity over the life of a software system Studies of software evolution are central to the understanding and practice of software development Yet it has received relatively little attention in the field of software engineering This book focuses on topics aimed at giving a scientific insight into the aspect of software evolution and feedback In summary the book covers conceptual phenomenological empirical technological and theoretical aspects of the field of software evolution with contributions from the leading experts This book delivers an up to date scientific understanding of what software evolution is to show why it is inevitable for real world applications and it demonstrates the role of feedback in software development and maintenance The book also addresses some of the phenomenological and technological underpinnings and includes rules and guidelines for increased software evolvability and in general sustainability of the evolution process Software Evolution and Feedback provides a long overdue scientific focus on software evolution and the role of feedback in the software process making this the indispensable guide for all software practitioners researchers and managers in the software industry *Software Process Modeling* Silvia T. Acuna, Natalia Juristo, 2006-01-27 Software Process Modeling brings together experts to discuss relevant results in software process modeling and expresses their personal view of this field This book focuses on new aspects of software process modeling Specifically it deals with socio technological aspects process modeling for new development types open source software dependability applications etc and organization change management The computer audience is placing growing demands on the software industry today Consumers are looking for more complex products that are at the same time easier to use Software developer organizations are expected to produce higher quality products and deliver them to the public faster In so doing however globally distributed development teams have to cope with understaffing and changing technologies The challenges for the software industry are apparently mounting Over the years a variety of

software process models have been designed to structure describe and prescribe the software systems construction process Most recently software process modeling is increasingly dealing with new challenges raised by the tests that the software industry has to stand Software Process Modeling is designed for a professional audience of researchers and practitioners in industry The book is also suitable for graduate level students in computer science

Formal Engineering for Industrial Software Development Shaoying Liu,2013-03-09 In any serious engineering discipline it would be unthinkable to construct a large system without having a precise notion of what is to be built and without verifying how the system is expected to function Software engineering is no different in this respect Formal methods involve the use of mathematical notation and calculus in software development such methods are difficult to apply to large scale systems with practical constraints e g limited developer skills time and budget restrictions changing requirements Here Liu claims that formal engineering methods may bridge this gap He advocates the incorporation of mathematical notation into the software engineering process thus substantially improving the rigor comprehensibility and effectiveness of the methods commonly used in industry This book provides an introduction to the SOFL Structured Object Oriented Formal Language method that was designed and industry tested by the author Written in a style suitable for lecture courses or for use by professionals there are numerous exercises and a significant real world case study so the readers are provided with all the knowledge and examples needed to successfully apply the method in their own projects

Formal Methods for Components and Objects Frank S.de Boer,Marcello Bonsangue,Susanne Graf,Willem-Paul de Roever,2003-12-01 Largeandcomplexsoftwaresystemsprovidethenecessaryinfrastructureinall dustries today In order to construct such large systems in a systematic manner the focus in the development methodologies has switched in the last two decades from functional issues to structural issues both data and functions are enc sulated into software units that are integrated into large systems by means of various techniques supporting reusability and modi ability This encapsulation

principles essential to both the object oriented and the more recent component based software engineering paradigms. Formal methods have been applied successfully to the verification of medium sized programs in protocol and hardware design. However their application to large systems requires the further development of specification and verification techniques supporting the concepts of reusability and modifiability. In order to bring together researchers and practitioners in the areas of software engineering and formal methods we organized the 1st International Symposium on Formal Methods for Components and Objects FMCO in Leiden, The Netherlands, November 5-8, 2002. The program consisted of invited tutorials and more technical presentations given by leading experts in the fields of Theoretical Computer Science and Software Engineering. The symposium was attended by more than 100 people. This volume contains the contributions of the invited speakers to FMCO 2002. We believe that the presented material provides a unique combination of ideas on software engineering and formal methods which we hope will be an inspiration for those aiming at further bridging the gap between the theory and practice of software engineering.

Rationale Management in Software Engineering Allen H. Dutoit, Raymond McCall, Ivan Mistrik, Barbara Paech, 2007-02-02. Thirty years ago I first entered the dark realm of software engineering through a prior interest in documentation. In those days documentation pretty much meant functional specifications. The idea that stakeholders in a system, its implementers, its end users, its maintainers, and so forth might want something other than an alphabetic list of function definitions was just taking hold. There was an exciting to me vision of stakeholders accessing and contributing to explanations of how and why aspects of a system work as they do, tradeoff analysis of concomitant downsides, and perhaps even accounts of why other possible approaches were not followed. There were many challenges to overcome in achieving this vision. The most formidable is the belief that people do not like to create or use documentation. This negative image of documentation is unfortunately more than just the bias of a few incorrigible system developers. It is more like a deep truth about human information behavior: about how human beings construe and act towards information. Humans are by default active users of information; they want to try things out and get things done. When documentation is interposed as a prerequisite between people and a desired activity, they try to skip through it, circumvent it, or undermine it. Designing information to suit the needs and interests of its users is an abiding challenge, but we have come a long way from functional specifications as the only answer.

Engineering Information Systems in the Internet Context Colette Rolland, Sjaak Brinkkemper, Motoshi Saeki, 2013-11-11. Since the early 1980s the IFIP WG8.1 conferences have provided a forum for the presentation and exchange of research results and practical experiences in the field of Information System Engineering. The WG8.1.02 Conference is held in the beautiful Kanazawa area in North western Japan. The ubiquitous Web has revolutionised the way organisations communicate and work internally as well as externally and consequently the nature of information systems supporting business activities. Web based systems have become the state of the art in information systems engineering in a very short time. As companies become more international in their strategies and activities information systems themselves span the globe led by the Internet. While the risks from failed systems may be enhanced due to higher expectations and increased complexity we have the opportunity to learn more about the nature of information systems and to develop new engineering techniques and methods to improve the development of information services in a World Wide Web context. The aim theme of this working conference is Engineering Information Systems in the Internet Context and the programme address both technologies and methodologies for building them. The call for the EISIC Conference was given international audience. The program committee was chosen from very well reputed researchers in the international information systems web information systems and communication communities. Seventeen papers have been selected for presentation and discussion during the conference.

Organized Adaption in Multi-Agent Systems George Vouros, Alexander Artikis, Kostas Stathis, Jeremy Pitt, 2009-06-19. Adaptation for purposes of self healing, self protection, self management or self regulation is currently considered to be one of the most challenging properties of distributed systems that operate in dynamic unpredictable and tentially hostile environments. Engineering for adaptation is particularly complicated when the distributed system itself is composed of autonomous entities that on one hand may act collaboratively and with benevolence and on the other may behave selfishly while pursuing their own interests. Still these entities have to coordinate themselves in order to adapt appropriately to the prevailing environmental conditions and furthermore to deliberate upon their own and the system's configuration and to be transparent to their users yet consistent with any human requirements. The question therefore of how to organize the envisaged adaptation for such autonomous entities in a systematic way becomes of paramount importance. The first international workshop on Organized Adaptation in Multi Agent Systems OAMAS was a one day event held as part of the workshop program arranged by the international conference on Autonomous Agents and Multi Agent Systems AAMAS. It was hosted in Estoril during May 2008 and was attended by more than 30 researchers. OAMAS was the steady convergence of a number of lines of research which suggested that such a workshop would be timely and opportune. This includes the areas of autonomic

computing swarm intelligence agent societies self organizing complex systems and emergence in general
