High-brightness Metal Vapour Lasers V. M. Batenin, V. V. Buchanov, A. M. Boichenko, M. A. Kazaryan, I. I. Klimovskii, E. I. Molodykh, 2016-12-12 High brightness metal vapor lasers have become the most bright and powerful in the visible spectral range among all existing laser types resulting in numerous applications ranging from purely fundamental research to practical application in large scale commercial problems such as isotope selection This book presents a full series of fundamental problems on the development of physical fundamentals and mathematical models for practical realization of a high power laser radiation on self contained transitions in metal atoms It is the first fundamental review on physics and the technique of high brightness metal vapor lasers Handbook of Lasers Marvin J. Weber, 2019-04-30 Lasers continue to be an amazingly robust field of activity Anyone seeking a photon source is now confronted with an enormous number of possible lasers and laser wavelengths to choose from but no single comprehensive source to help them make that choice The Handbook of Lasers provides an authoritative compilation of lasers their properties and original references in a readily accessible form Organized by lasing media solids liquids and gases each section is subdivided into distinct laser types Each type carries a brief description followed by tables listing the lasing element or medium host lasing transition and wavelength operating properties primary literature citations and for broadband lasers reported tuning ranges The importance and value of the Handbook of Lasers cannot be overstated Serving as both an archive and as an indicator of emerging trends it reflects the state of knowledge and development in the field provides a rapid means of obtaining reference data and offers a pathway to the literature It contains data useful for comparison with predictions and for developing models of processes and may

reveal fundamental inconsistencies or conflicts in the data

Short Wavelength Laboratory Sources Davide

Bleiner, John Costello, Francois de Dortan, Gerry O'Sullivan, Ladislav Pina, Alan Michette, 2014-12-04 Our ability to manipulate short wavelength radiation 0.01–100 nm equivalent to 120 keV–12 eV has increased significantly over the last three decades This has led to major advances in applications in a wide range of disciplines such as the life and medical sciences including cancer related studies environmental science including studies of pollution and its effects archaeology and other cultural heritage disciplines and materials science Although expansion in application areas is due largely to modern synchrotron sources many applications will not become widespread and therefore routinely available as analytical tools if they are confined to synchrotrons There is a need to develop bright but small and low cost X-ray sources not to replace synchrotrons but to complement them and this book will look at how to facilitate these developments Written by a distinguished team of international authors this book is based on the COST Action MP0601 Short Wavelength Laboratory Sources The contents are divided into five main sections the introductory section provides a comprehensive introduction to the fundamentals of radiation generation mechanisms and short wavelength laboratory sources The middle sections focus on modelling and simulation source development improvement and characterisation and integrated systems sources optics and detectors The final section looks at recent applications Aimed at academic and industrial researchers in physical chemistry and chemical physics the contents provides practical information about the implementation of short wavelength laboratory sources and their applications

Solid-State Lasers and Applications Alphan Sennaroglu, 2017-12-19
