International Technologies For Hazardous Waste Site Cleanup:

International Technologies for Hazardous Waste Site Cleanup T. Nunno, 1990-12-31 From the Introduction The purpose of this program is to identify and assess international technologies that could be utilized for hazardous waste site remediation within the United States This report summarizes the results of Phase I of this program which identified international alternative technologies potentially applicable to Superfund site remediation All remedial technologies identified as a result of the Phase I activities are described in this report Recommendations are also provided for further study in Phase II which will focus on the most promising international technologies General Approach The technical approach for Phase I focused on the location acquisition and interpretation of existing data studies and related documentation for remedial technologies Data were obtained through a comprehensive literature survey and telephone contracts interviews with agencies industries vendors research groups and others involved in the development and marketing of technologies Emphasis was placed on technologies that have been developed and or applied in Europe Japan and Canada because of the promise that these areas have more advanced hazardous waste programs in place An important part of the Phase I activity was the assembly and review of information that EPA scientific personnel have obtained in their foreign travel assignments or through contact with foreign consultants or academics A list of EPA personnel that were contact for input to the Phase I technology identification activity is provided in Section 4 along with non EPA contacts *Review of International Technologies for Destruction of Recovered Chemical Warfare Materiel* National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee on Review and Evaluation of International Technologies for the Destruction of Non-Stockpile Chemical Materiel, 2006-12-02 The Chemical Weapons Convention requires among other things that the signatories to the convention which includes the United States destroy by April 29 2007 or as soon possible thereafter any chemical warfare materiel that has been recovered from sites where it has been buried once discovered For several years the United States and several other countries have been developing and using technologies to dispose of this non stockpile materiel To determine whether international efforts have resulted in technologies that would benefit the U S program the U S Army asked the NRC to evaluate and compare such technologies to those now used by the United States This book presents a discussion of factors used in the evaluations summaries of evaluations of several promising international technologies for processing munitions and for agent only processing and summaries of other technologies that are less likely to be of benefit to the U S program at this time Hazardous and Toxic Waste Management, January 1989 - May 1993 Louise Reynnells, 1993 **Unit Operations in Environmental Engineering** Robert Noyes, 1994-12-31 This book discusses the practical aspects of environmental technology organized into eight chapters relating to unit operations as follows 1 Biological Technology 2 Chemical Technology 3 Containment and Barrier Technology 4 Immobilization Technology 5 Membrane Technology 6 Physical Technology 7 Radiation and Electrical

Technology8 Thermal Destruction TechnologyTraditional technologies have been included as well as those that can be considered innovative and emerging The traditional approaches have been the most successful as contractors are careful about bidding on some of the newer technologies However as regulatory requirements increase markets will open for the innovative and emerging processes There will be increasing pressure to break down complex waste streams with each subsequent stream demanding separate treatment In addition a number of technologies have been developed by combining processes directly or in a treatment train and these developments are expected to assume increasing importance However such concerns as uncertainties due to liability regulatory approval price competition and client approval have limited the application of some of these newer technologies
