Essays on Trade Policy and International Institutions Under Incomplete Information Giovanni Maggi, 1994

Modeling Developing Countries' Policies In General Equilibrium Jaime De Melo, 2015-02-26 Policies affecting resource allocation across tradable sectors and those affecting the incentives to produce tradable activities are key determinants of macroeconomic balance and growth Computable general equilibrium models have made significant contributions to both types of policies With advancements in computing power and software these models have become easy to implement and are now widespread The question then is when and how to formulate them to avoid the black box syndrome This book seeks to

address these issues through carefully selected essays that analyse how to model general equilibrium linkages in a single economy across developing and developed economies and across both micro and macro policies Micro policies examined include tariffs quotas and VERs the choice of taxes to maximize government revenue migration and remittances and the political economy of tariff setting Applications on macro policies cover capital inflows real exchange rate determination and the modeling of the effects of adjustment policies on income distribution The book provides insights on the development of a family of models for diverse policy choices focusing on the ways to model the following links between tradable and non tradable activities labor markets and portfolio choices given limited capital mobility Selected essays are all inspired by specific policy problems including the adaptation to external shocks i e oil consequences of capital inflows determinants of migration and associated remittances the productivity of foreign aid and rent seeking activities under trade regimes with non price trade restrictions Examples in this book lay out the theoretical foundations alongside a variety of applications to help formulate coherent and transparent models for policy analysis Archetype economies are extensively used to show how differences in economic structure influence the effects of policies Graduate students and policy analysts interested in modeling will find this a useful compendium of studies *Journal of International Economics* ,1992 *The Oxford Handbook of International Trade Law* Daniel L. Bethlehem,Daniel Bethlehem,Donald McRae,Rodney Neufeld,Isabelle Van Damme,2022 The Oxford Handbook of International Trade Law offers extensive analysis and critique on the principles of modern international trade law considering the systems of trade between nations in their economic and institutional contexts

International Business Ehud Menipaz,Amit Menipaz,2011-03-17 What is international business How does it differ from local or national business What are the fundamental challenges and emerging trends in international business What is the impact of globalization corporate social responsibility and the ever expanding use of digital technology on corporate strategies and executive decisions International Business Theory and Practice addresses these questions by providing the student with a broad overview of the subject while guiding readers through the practical issues and context of international business with the use of a range of examples cases and discussion questions drawn from around the world Current critical issues in international business are analysed and explored corporate social responsibility in an era of unprecedented globalization the rise of the global entrepreneur and the democratization of competition worldwide and applications of technology in a digital economy Key Features Unpacks the complex issues facing both multi national enterprises MNE and international small and medium enterprises SME Contains a full range of learning features including international case studies explanations of key terms a glossary and annotated further reading A dedicated companion website with material to support both lecturers and students *Corporate behaviour and sustainable development* Haiyue Liu,Xiaoyu Wang,Yuli Shan,Shiyang Hu,Rui Xue,2023-05-09 **Firm Interests** Cornelia Woll,2018-07-05 Firms are central to trade policy making Some analysts even suggest that they dictate policy on the basis of their material interests Cornelia Woll counters these

assumptions arguing that firms do not always know what they want To be sure firms lobby hard to attain a desired policy once they have defined their goals Yet material factors are insufficient to account for these preferences The ways in which firms are embedded in political settings are much more decisive Woll demonstrates her case by analyzing the surprising evolution of support from large firms for liberalization in telecommunications and international air transport in the United States and Europe Within less than a decade former monopolies with important home markets abandoned their earlier calls for subsidies and protectionism and joined competitive multinationals in the demand for global markets By comparing the complex evolution of firm preferences across sectors and countries Woll shows that firms may influence policy outcomes but policies and politics in turn influence business demands This is particularly true in the European Union where the constraints of multilevel decision making encourage firms to pay lip service to liberalization if they want to maintain good working relations with supranational officials In the United States firms adjust their sectoral demands to fit the government's agenda In both contexts the interaction between government and firm representatives affects not only the strategy but also the content of business lobbying on global trade

Trade, Global Policy, and the Environment Per Fredriksson, 1999-01-01

QUOTE We live in an increasingly interconnected world Trade flows worldwide are growing rapidly and global production patterns are shifting as countries follow their comparative advantage in production via trade At the same time however there is growing concern about potential adverse environmental impacts from increasing trade QUOTE John A Dixon Lead Economist The Environment Department World Bank Interest in the trade and environment debate has intensified as a result of international trade agreements and because many proposed solutions to the climate change problem have potential implications for the global trading system Clearly more empirical work is needed to inform the debate guide policymakers toward solutions and help set priorities This volume is an attempt to further our understanding of the empirical links between trade and the environment Thirteen chapters which were presented as papers at a World Bank conference in April 1998 focus on three main themes 1 Effects of trade liberalization and growth on the environment 2 The QUOTE pollution haven QUOTE hypothesis 3 Economic instruments for resolving global environmental problems The papers address a number of different issues within each of the themes offering new data or new questions and approaches They are devoted to deepening our understanding and empirical knowledge of the various effects of trade liberalization Only through a firm understanding of the linkages involved can well founded policy advice be formulated
