**Wahb** Ernest Thompson Seton, 2015-07-30 First published more than a century ago *The Biography of a Grizzly* recounts the life of a fictitious bear named Wahb who lived and died in the Greater Yellowstone region This new edition combines Ernest Thompson Seton s classic tale and original illustrations with historical and scientific context for Wahb s story providing a thorough understanding of the setting cultural connections biology and ecology of Seton s best known book By the time *The Biography of a Grizzly* was published in 1900 grizzly bears had been hunted out of much of their historical range in North America The characterization of Wahb along with Seton s other anthropomorphic tales of American wildlife helped to change public perceptions and promote conservation As editors Jeremy M Johnston and Charles R Preston remind us however Seton s approach to writing about animals put him at the center of the Nature Faker controversy of the early twentieth century when John Burroughs and Theodore Roosevelt among others denounced sentimental representations of wildlife The editors address conservation scientists continuing concerns about inaccurate depictions of nature in popular culture Despite its anthropomorphism Seton s paradoxical book imparts a good deal of insightful and accurate natural history even as its exaggerations shaped early twentieth century public opinion on conservation in often counterproductive ways By complicating Seton s enthralling tale with scientific observations of grizzly behavior in the wild Johnston and Preston evaluate the story s accuracy and bring the story of Yellowstone grizzlies into the

present day Preserving the 1900 edition's original design and illustrations Wahb brings new understanding to an American classic updating the book for current and future generations *Yellowstone and the Biology of Time* Mary Meagher, Douglas B. Houston, 1999-02-01 Established in 1872 Yellowstone National Park is the oldest and one of the largest national parks in the world In this remarkable book scientists Mary Meagher and Douglas B Houston present 100 sets of photographs that compare the Yellowstone of old with the park of today Most of the photo sets include three pictures not the usual two with many of the original views dating back to the 1870s and 1880s From the same photo points used by early photographers Meagher and Houston rephotographed the scenes in the 1970s and then following the great fires of 1988 again in the 1990s The result is an illuminating record of Yellowstone's dynamic ecosystem and its changes over time Through close analysis of the photos and reference to the vast amount of available data Meagher and Houston describe changes in vegetation growth of wildlife populations the effect of beaver occupancy on wetland areas and geothermal and elevational shifts At the same time they point out the extent to which many sites have not changed despite important switches in park policy and an increase in human activity Yellowstone National Park has long been the focus of major ecological debates Should managers allow wildfires to burn Should the elk and bison populations be controlled Are too many people visiting the park Yellowstone And The Biology Of Time offers a wealth of information to help us answer these questions A visual treasure this book will be of value to scientists from various disciplines as well as to the many people who care about Yellowstone and other protected wilderness areas around the world *Yellowstone's Wildlife in Transition* P. Sea to address this problem as it relates to archeological work that encompasses both terrestrial and underwater archeology on a single site or on a collection of related sites For example despite the fact that we know that bays and waterways structured historic settlement there is a lack of archeological literature that looks at both the nautical and terrestrial signatures of watersheds in uence on historic culture      *Geologic Field-trip Guide to the Volcanic and Hydrothermal Landscape of the Yellowstone Plateau* Lisa A.
