Carlton, 2023-09-01 The Fourth Edition of The Light and Smith Manual continues a sixty five year tradition of providing to both students and professionals an indispensable comprehensive and authoritative guide to Pacific coast marine invertebrates of coastal waters rocky shores sandy beaches tidal mud flats salt marshes and floats and docks This classic and

unparalleled reference has been newly expanded to include all common and many rare species from Point Conception California to the Columbia River one of the most studied areas in the world for marine invertebrates In addition although focused on the central and northern California and Oregon coasts this encyclopedic source is useful for anyone working in North American coastal ecosystems from Alaska to Mexico More than one hundred scholars have provided new keys illustrations and annotated species lists for over 3 500 species of intertidal and many shallow water marine organisms ranging from protozoans to sea squirts This expanded volume covers sponges sea anemones hydroids jellyfish flatworms polychaetes amphipods crabs insects snails clams chitons and scores of other important groups The Fourth Edition also features introductory chapters on marine habitats and biogeography interstitial marine life and intertidal parasites as well as expanded treatments of common planktonic organisms likely to be encountered in near to shore shallow waters The Fourth Edition of The Light and Smith Manual continues a sixty five year tradition of providing to both students and professionals an indispensable comprehensive and authoritative guide to Pacific coast marine invertebrates of coastal waters Guide to Intertidal Bivalves In Southwest Alaska National Parks Dennis C. Lees, Alaska Region Inventory and Monitoring Program, 2006 **Guide for Identifying Select Bivalve Species Common to Southeast Alaska** K. Kendall, K. Brown, Shannon K. C. Atkinson, Robert P. Stone, 2017 This guide presents a comparison of the major anatomical structures amongst select bivalve species common in Southeast Alaska The guide was compiled for use in identifying the prey contents found inside sea otter *Enhydra lutris* stomachs Brown et al 2017 in review and is not inclusive of all bivalve species throughout Alaska The guide was designed in response to a lack of photographic information with which to compare bivalve siphons Clams comprise up to 75% of the sea otter diet Garshelis et al 1986 Kvitek and Oliver 1992 Kvitek et al 1993 Wolt et al 2012 However sea otters rarely consume bivalve shells leaving the soft parts most notably the siphon and foot as the most reliable features for identifying bivalve species inside sea otter stomachs Since most guides include little or no information regarding the soft parts of bivalves the authors set out in search of a way to compare bivalve siphons and feet As part of that work this guide was constructed with the intent that it would be useful to others in doing similar work It may also be useful for the identification of walrus *Odobenus rosmarus* and bearded seal *Erignathus barbatus* stomach contents Nora Foster University of Alaska Museum personal communication or for the identification of bivalve siphons from diving or submersible surveys of seafloor habitats Introduction doi 10 7289 V5 TM AFSC 341 <http://dx.doi.org/10.7289/V5-TM-AFSC-341>
