Interventional Techniques In Cardiovascular Medicine:

Interventional Techniques in Cardiovascular Medicine Vinzenz Hombach, M. Kochs, A.J. Camm, 2012-12-06 Since the introduction of balloon angioplasty for the relief of coronary artery stenoses and of anginal symptoms in patients with coronary artery disease by Andreas Grintzig in 1977 the field of interventional technology and treatment strategies has grown enormously For the reduction of hemodynamically significant coronary artery stenoses balloon angioplasty is the standard and reference method with a high primary success and low complication rate Because of the relatively high recurrence rates of 30-40% of balloon angioplasty a whole family of different angioplasty techniques has been developed since then Among those are atherectomy devices laser angioplasty radiofrequency angioplasty high and low speed rotational angioplasty and stenting of stenosed vessels Balloon angioplasty has been extended to aortic and mitral valve stenoses and supraventricular and ventricular tachycardias can now be treated by catheter ablation techniques In 1989 an International Symposium on standard and newer interventional techniques has been held at the University of Ulm This volume contains the essential parts and presentations of the international faculty of experts in the field In four chapters the principles advantages pitfalls and future developments of coronary angioplasty angioplasty of peripheral arteries balloon valvuloplasty and of catheter ablation of supraventricular and ventricular tachycardias are described in detail We hope that this State of the Art representation will be of great value for both the non expert reader and the active researcher in the fields addressed within the book V Hombach M Kochs and A J Camm ix List of contributors U U Essential Concepts in Cardiovascular Intervention Deepak L. Excitation-Contraction Coupling and Cardiac Contractile Force Donald Bers,2013-04-17 The main aim of this monograph is to provide an overview of calcium regulation in cardiac muscle cells particularly with respect to excitation contraction coupling and the control of cardiac contractile force It is my hope that this book will be useful to students of the cardiovascular system and muscle at all different levels and in different disciplines such as physiology biochemistry pharmacology and pathophysiology I also hope that it will find use for those studying developmental comparative and disease processes as well as more integrative phenomenon I kept several goals in mind in writing this monograph First it should be easily readable Second I chose to include numerous illustrations and tables to help integrate results from numerous investigators in practical formats and also present key figures from important papers Thus this monograph may serve as a resource of information for people working in the areas described herein Third the presentation is a very personal one and I have necessarily drawn extensively on my personal experience in this field over the past 15 years This I think helps maintain a certain continuity of thought from chapter to chapter Fourth I have made serious attempts to make each chapter up to date despite the breadth of topics covered I have also tried to be equitable in choosing references while not intending to be comprehensive or exhaustive Neither of these aims can be perfectly matched and I apologize to the many investigators whose papers I have not cited but should have
