[Journey to the Center of the Earth](#) Jules Verne, 2019-06-15 *Journey to the Interior of the Earth* is a classic science fiction novel by Jules Verne. The story involves German professor Otto Lidenbrock, who believes there are volcanic tubes going toward the centre of the Earth. He, his nephew Axel, and their guide Hans descend into the Icelandic volcano Snæfellsjökull, encountering many adventures, including prehistoric animals and natural hazards, before eventually coming to the surface again in southern Italy at the Stromboli volcano. The story begins in the Lidenbrock house in Hamburg, Germany, with Professor Lidenbrock rushing home to peruse his latest purchase, an original runic manuscript of an Icelandic saga written by Snorri Sturluson, *Heimskringla*, the chronicle of the Norwegian kings who ruled over Iceland. While looking through the book, Lidenbrock and his nephew Axel find a coded note written in runic script. This is a first indication of Verne's love for cryptology. Coded, cryptic, or incomplete messages as a plot device will continue to appear in many of his works, and in each case, Verne goes a long way to explain not only the code used but also the mechanisms used to retrieve the original text. Lidenbrock and Axel transliterate the runic characters into Latin letters, revealing a message written in a seemingly bizarre code. Lidenbrock attempts a decipherment, deducing the message to be a kind of transposition cipher, but his results are as meaningless as the original. Professor Lidenbrock decides to lock everyone in the house and force himself and the others, Axel and the maid Martha, to go without food until he cracks the code. Axel discovers the answer

when fanning himself with the deciphered text Lidenbrock's decipherment was correct and only needs to be read backwards to reveal sentences written in rough Latin Axel decides to keep the secret hidden from Professor Lidenbrock afraid of what the Professor might do with the knowledge but after two days without food he cannot stand the hunger and reveals the secret to his uncle Lidenbrock translates the note which is revealed to be a medieval note written by the fictional Icelandic alchemist Arne Saknussemm who claims to have discovered a passage to the center of the Earth via Snæfells in Iceland

challenges of global climate change **The Cosmic Journey in the Book of Revelation** Joel M. Rothman,2023-05-18 Joel M Rothman considers the significance of cosmology in biblical and extra biblical texts and the role of the cosmic journey in many apocalyptic narratives He posits that Revelation s narrative likewise takes the hearer on a virtual journey through a cosmic story space of great theological significance While scholarship commonly assumes a three tiered cosmos in Revelation Rothman argues that Revelation s narrative operates in a four tiered cosmos with the hyper heaven sitting above the sky heaven earth and abyssal depths a cosmic story space that is recreated in the imagination of the hearers Beginning with a methodology of visual narrative reading Rothman then discusses the assumptions and existing conceptions regarding heaven and earth He stresses that Revelation does not exhibit tension in its portrayal of heaven between heaven as a site of conflict and heaven as the realm in which God truly reigns but rather shows readers a sky heaven characterised by archetypal conflict between powerful sky beings and a hyper heaven defined by full recognition of the Throne In journeying through the sky structure and God space and by analysing the four cosmic layers in operation the distinct nature of the two sky spaces cosmic change and the ideological import of the cosmic structure Rothman demonstrates that the existence of the hyper heaven in contradistinction with the limited lived cosmos of earth and sky heaven is a present guarantee of the final cosmic transformation that creates a new space for human life exclusive of imperial draconian elements **CALENDAR OF**
