Juggernaut Growth On A Finite Planet:

Juggernaut Lindsey Grant, 1996 Lindsey Grant examines the human condition as population and consumption levels approach the edges of the Earth's ability to support them. The book is a unique synopsis of the interactions among population, food production, the energy transition, air pollution, and climate change, technology, trade, policies, productivity, and unemployment. It describes the different ways that the current population explosion plays out in the poorest countries, the emerging countries, and the old industrial nations and shows how they will shape each other's future. It relates that growth to U.S. policies on foreign affairs, agriculture, trade, immigration, unemployment, and health care and proposes some specific changes in thinking and policies.

Routledge Handbook of Environmental Anthropology Helen Kopnina, Eleanor Shoreman-Ouimet, 2016-08-12 Environmental Anthropology studies historic and present human environment interactions. This volume illustrates the ways in which today's environmental anthropologists are constructing new paradigms for understanding the multiplicity of players, pressures, and ecologies in every environment and the value of cultural knowledge of landscapes. This Handbook provides a comprehensive survey of contemporary topics in environmental anthropology and thorough discussions on the current state and prospective future of the field in seven key sections. As the contributions to this Handbook demonstrate, the subfield of environmental anthropology is responding to cultural adaptations and responses to environmental changes in multiple and complex ways. As a discipline concerned primarily with human environment interaction, environmental anthropologists recognize that we are now working within a pressure cooker of rapid environmental damage that is forcing behavioural and often cultural changes around the world. As we see in the breadth of topics presented in this volume, these environmental challenges have inspired renewed foci on traditional topics such as food procurement, ethnobiology, and spiritual ecology, and a broad new range of subjects such as resilience, nonhuman rights, architectural anthropology, industrialism, and education. This volume enables scholars and students quick access to both established and trending environmental anthropological explorations into theory, methodology, and practice.

Rethinking Environmental Protection Phillip F. Cramer, 2000-01-01 Despite widespread popular support for environmental action, Phillip F. Cramer argues that current U.S. environmental policy approaches fail to address the real threat of environmental insecurity. Cramer traces this failure to a reluctance to recognize and address the interconnectedness of natural forces, just as all elements within the environment are linked, so too should our perspectives on and responses to environmental degradation be linked. In this book, Cramer provides an innovative holistic approach to environmental protection that incorporates the best lessons learned from the fields of biology, ethics, philosophy, political science, law, ecology, and international relations. He especially advocates local action and providing illustrative examples demonstrates how local action around the world is most effective when carried out within a global framework that supports information dissemination and international coordination. This book will energize to thought and action any scholar, student, or general reader concerned.

with environmental issues and our current trajectory toward environmental decay Environmental Politics and Policy, 1960s-1990s Otis L. Graham, 2010-11-01 This volume of original essays tells the story of how the agenda of the environmental movement in America has changed from the time Rachel Carson sounded her famous clarion call in the early 1960s up to our current era when the globalization of environmental issues has affected both the severity of the problems we all face and the political difficulty of dealing with them Besides the editor whose Introduction and Epilogue frame the book the contributors include well known journalist Roy Beck activist civil servant Leon Kolankiewicz environmental scholar Michael E Kraft historian Martin V Melosi and political scientist David Vogel This volume was originally published as a special issue of The Journal of Policy History Population Puzzle Laura E. Huggins, Hanna Skandera, 2013-09-01 Drawing from government reports think tank studies scholarly journals magazines newspapers and books this insightful overview offers a range of contrasting viewpoints and policy perspectives on the major issues concerning world population growth with particular emphasis on the impact of population trends on the United States **Toward a Theory of Peace** Randall Caroline Watson Forsberg, 2019-12-15 Military analyst peace activist teacher and social theorist Randall Caroline Watson Forsberg 1943 2007 founded the Nuclear Freeze campaign and the Institute for Defense and Disarmament Studies In *Toward a Theory of Peace* completed in 1997 and published for the first time here she delves into a vast literature in psychology anthropology archeology sociology and history to examine the ways in which changing moral beliefs came to stigmatize forms of socially sanctioned violence such as human sacrifice cannibalism and slavery eventually rendering them unacceptable Could the same process work for war Edited and with an introduction by political scientists Matthew Evangelista Cornell University and Neta C Crawford Boston University both of whom worked with Forsberg *Techno-Fix* Michael Huesemann, Joyce Huesemann, 2011-10-04 Challenges beliefs about technology s assumed potential for enabling a continuation of current consumption rates arguing for extensive reform while explaining that technological advances are hastening an environmental collapse Original The Futurist, 2001 **Implementing Ecological Integrity** Philippe J. Crabbé, Philippe Crabbé, 2000-06-30 The concept of ecological integrity is used in environmental policy but is usually left undefined The definition proposed by the Integrity Group is quite demanding it tends to focus on a nature that has been impacted by human activity as little as possible viz located in remote areas emphasising and protecting its self organising capacities for life as a product of the natural history of ecosystems The demand is for an ethical reverence for life in all its manifestations In its study of ecological integrity the book s strength is its true multidisciplinary strongly grounded in ecology thermodynamics ethics and complex systems approach It covers a broad international terrain it documents geographically wide ranging case studies It is thus applied in character and does not remain at the purely conceptual level Perfect Planet, Clever Species William C. Burger, 2011-04-29 A masterful survey Times Literary Supplement A concise extremely well written journey about this planet s history Highly recommended Choice In a feat that may rival time travel Burger has condensed 4 5 billion years

into 294 eminently readable pages as he builds a case for solitude in our Milky Way galaxy Burger writes with the clarity and humor of one who has had experience communicating complicated ideas to the lay public Boston Globe For many years the federal government funded the Search for Extraterrestrial Intelligence SETI later popularized by Carl Sagan's novel Contact and the movie starring Jodie Foster Though in actuality SETI never did make contact with signals from an alien civilization the search continues to this day through privately funded endeavors How likely is it that intelligent life exists elsewhere in the universe This is the intriguing question that has prompted William Burger's illuminating and absorbing exploration of the unusual circumstances surrounding life on earth Examining the critical episodes in our planet's early history and the peculiar trajectory of life on our world Burger shows that the long odyssey of planet Earth may be utterly unique in our galaxy For example he describes features of the sun that are far from average By some estimates 95 percent of the other stars in the Milky Way galaxy are smaller and it is unlikely that any of them could supply the energy requirements for a life sustaining planet such as our own Earth as the third planet from the sun sits within the Goldilocks orbit it is in the perfect position to receive not too much heat like Mercury and Venus and not too little like more distant planets of the solar system but just the right amount to foster the development of life Turning to the evolution of life itself Burger points out a host of amazing accidents for example the extinction of dinosaurs and the proliferation of flowering plants that make the steps along the way to Homo sapiens seem like very rare events indeed He also calls attention to the curious fact that the early hominid brain tripled in size over the relatively short time period leading to the appearance of modern human beings Finally he notes aspects of humanity's cultural evolution that seem unlikely to have been duplicated anywhere else Burger's enlightening evaluation of evolutionary and cosmic history full of fascinating details shows that the human achievement may be unique in our galaxy More Praise for Perfect Planet Clever Species This is by far the best existing treatment of the SETI problem Based on the most recent findings of science it analyzes in full detail all the unique factors that would have to be right for success Particularly fascinating is Burger's critical study of the ten thousands of unpredictable steps in the evolution of Homo sapiens after the origin of life A splendid history of mankind Ernst Mayr Harvard University I believe that this brilliant richly documented and well written book on par in historical influence or importance with classics such as Rachel Carson's Silent Spring Paul Ehrlich's The Population Bomb E O Wilson's On Human Nature or Sarah Blaffer's Mother Nature will go down as one of the most significant philosophical guides for us to follow as we stumble blindly into the 21st Century Hugh H Iltis Emeritus Botany Professor University of Wisconsin Madison With a lively narrative and at a headlong pace Bill Burger leads us expertly from the origin of our planet through to the evolutionary history of humankind Along the way he repeatedly highlights the part played by chance occurrence of favourable conditions Such contingency means that we can reconstruct our past but not predict our future But we can address Burger's central question Are we alone Soberingly he builds up step by step to his conclusion The history of evolution on Earth is a compelling story in its own right and one tha

Evolution

Science and Ethics in the Third Millennium Robert Cliquet, Dragana Avramov, 2018-01-10 The book aims to revitalise the interdisciplinary debate about evolutionary ethics and substantiate the idea that evolution science can provide a rational and robust framework for understanding morality It also traces pathways for knowledge based choices to be made about directions for future long term biological evolution and cultural development in view of adaptation to the expected probable and possible future and the ecological sustainability of our planetary environment The authors discuss ethical challenges associated with the major biosocial sources of human variation individual variation inter personal variation inter group variation and inter generational variation This book approaches the long term challenges of the human species in a holistic way Researchers will find an extensive discussion of the key theoretical scientific aspects of the relationship between evolution and morality Policy makers will find information that can help them better understand from where we are coming and inspire them to make choices and take actions in a longer term perspective The general public will find food for thoughts

Endangered Rivers and the Conservation Movement Tim Palmer, 2004-01-29 Based on careful research and hundreds of interviews this information packed narrative is regarded as a classic in the field of conservation This updated edition includes two new chapters that chart the course of conservation during the past twenty years and explore how the movement to protect rivers will likely change in the twenty first century

A Diet of Austerity Elaine Graham-Leigh, 2015-04-24 Received wisdom is increasingly that we all have to eat less to save the planet but received wisdom is wrong A Diet of Austerity argues that just as the poor are blamed for the economic crisis Malthusian conceptions about food and ecology are being used to hold the working class responsible for climate change and global hunger Challenging existing dogmas about overconsumption and personal responsibility it shows that what we need to stop climate change is system change

The Cultures of Economic Migration Tope Omoniyi, 2016-03-16 This volume explores the processes of economic migration the social conditions that follow it and the discourses that underlie research into it Reflecting critically on economic migration and on the process of studying and creating knowledge about it the contributors address the question of whether recent enquiries into modernity bring a newer and better comprehension of the nature of dislocation and movement or whether these serve simply to replicate familiar modes of placing people and individuals The book is organized into perspectives in and on specific continents Europe Asia and Africa in order to explore notions regarding economic migration within and across regions as well as towards displacing the Eurocentrism of many studies of migration

Forests in a Full World G. M. Woodwell, Ola Ullsten, 2001-01-01 Having surged past the six billion mark the human population of the twenty first century is making overwhelming demands on the earth and its forests Although economic and political considerations once dominated the management of forests and land in today s crowded world environmental concerns are rapidly emerging as dominant This book drawn from experience with the World Commission on Forests and Sustainable Development presents a concise accessible view of the current status of forests globally of demands on them and

of their importance in maintaining a fully functional human habitat The book also presents a major challenge in planning for land use in a full world where defense of the public interest becomes more and more difficult and demanding Opening with an examination of forests and the effects of human activities on them the book then considers the relationship of forests to global warming agriculture biotic impoverishment water resources and climate Later chapters discuss the global wood supply plantation forestry and forests as a source of energy The final chapters call for local and global planners to weigh the spiraling competitive demands for forest resources and to redefine what is in the public interest in the context of forests

Sexuality in World History Peter N. Stearns, 2009-02-18 Expansive and accessible Peter Stearns Sexuality in World History offers a much needed introduction to histories of sexuality from a global perspective Mary Spongberg Head of Department of Modern History Macquarie University USA This book examines sexuality in the past and explores how it helps explain sexuality in the present The subject of sexuality is often a controversial one and exploring it through a world history perspective emphasises the extent to which societies including our own are still reacting to historical change through contemporary sexual behaviours values and debates The study uses a clear chronological structure to focus on major patterns and changes in sexuality both sexual culture and sexual behaviours in the main periods of world history with comparison and discussion across cultures and societies Topics covered include issues involved in studying the history of sexuality the sexual implications of the transition from hunting and gathering economies to agricultural economies sexuality in Classical societies the post Classical period and the spread of the world religions sex in an age of trade and colonies changes in sexual behaviours and sexual attitudes between 1750 and 1950 sex in contemporary world history The book is a vital contribution to the study of world history and is the perfect companion for all students of the history of sexuality

The View from Bald Hill Carl E. Bock, Jane H. Bock, 2000-05-16 In 1540 Francisco Vasquez de Coronado introduced the first domestic livestock to the American Southwest Over the subsequent four centuries cattle horses and sheep have created a massive ecological experiment on these arid grasslands changing them in ways we can never know with certainty The Appleton Whittell Research Ranch in the high desert of southeastern Arizona is an 8 000 acre sanctuary where grazing has been banned since 1968 In this spirited account of thirty years of research at the ranch Carl and Jane Bock summarize the results of their fieldwork which was aimed at understanding the dynamics of grasslands in the absence of livestock The View from Bald Hill provides an intimate look at the natural history of this unique site and illuminates many issues pertaining to the protection and restoration of our nation's grasslands *Population at the Millennium: the U.S. Perspective*, 1998

Ecological Security Dennis Clark Pirages, Theresa Manley DeGeest, 2003-07-28 Global environmental politics has emerged from its initial incarnation in the arena of low politics and is rapidly becoming a high politics concern Concern over water pollution air pollution deforestation and related basic environmental issues is giving way to a broader ecological security agenda In this pathbreaking book Dennis Clark Pirages and Theresa Manley DeGeest argue for dramatically

broadening the context in which security priorities are established in an age of increasing globalization Addressing the very fundamental question of the sources of premature human deaths and associated insecurity both historically and in the contemporary world the authors observe that in the twentieth century starvation killed nearly as many people as did military conflict But disease was responsible for killing nearly fourteen times as many people as was warfare And in the contemporary world of the twenty first century environmental terrorism and biological warfare are blurring the traditional distinctions between natural disasters accidental deaths and military casualties Ecological Security moves the analysis of global environmental and resource issues to the next level by developing an eco evolutionary perspective for analyzing emerging problems associated with rapid globalization Preserving future ecological security will depend upon maintaining dynamic equilibriums among human populations and between them and pathogenic microorganisms other species and the sustaining capabilities of nature This eco evolutionary framework is used to anticipate and analyze emerging demographic ecological and technological discontinuities and dilemmas associated with rapid globalization The authors conclude by stressing the need for new kinds of global public goods to mitigate the harshest impacts of these rapid and interrelated changes

Conserving the Environment Laura K. Egenderf,1999 This book discusses global and national debates on the state of the environment the preservation of biodiversity methods for reducing pollution and more
