Day 2: Counting a 2-Digit Number Made From Linking Cubes

I can count linking cubes to tell how many.

Materials:

- Linking Cubes
- White Boards & Markers
- Peanut Butter Jelly Time Materials
- Day 2 Ticket Out The Door

Instructional Activity

In this lesson, you are focusing on having your students count a set of linking cubes that you have already built to represent a two digit number.

Start this lesson with a story problem so that your students have a context to think about the cubes you have built. For example, Jackson bought 5 packs of markers that each had 10 markers inside. He also bought three extra markers. How many markers did Jackson buy?

Show your students a set of linking cubes that you have already built to represent this problem with five ten sticks and three extra ones. Ask your students "How do these blocks match the story we just heard? Where are the five packs of markers? Where are the three extra markers? What could we do to find out how many markers there are all together?"

Referencing the previous lesson, ask your students if they could count the 10 sticks to find out how many the 10 sticks represent. After counting, ask your students "What should we do with the three extra markers here? skip a dramatic way, skip a markers here? Don't exaggeration at this

Number Sense, Grade 1 Chris Confer,2005 The teaching number sense series focuses on the critical role that number sense plays in students developing mathematical understanding Number sense encompasses a wide range of abilities including being able to make reasonable estimates and to think and reason flexibly **Eureka Math Grade 4 Study Guide** Great Minds,2015-11-09 Eureka Math is a comprehensive content rich PreK 12 curriculum that follows the focus and coherence of the Common Core State Standards in Mathematics CCSSM and carefully sequences the mathematical progressions into expertly crafted instructional modules The companion Study Guides to Eureka Math gather the key components of the curriculum for each grade into a single location unpacking the standards in detail so that both users and non users of Eureka

Math can benefit equally from the content presented. Each of the Eureka Math Curriculum Study Guides includes narratives that provide educators with an overview of what students should be learning throughout the year, information on alignment to the instructional shifts and the standards design of curricular components, approaches to differentiated instruction, and descriptions of mathematical models. The Study Guides can serve as either a self-study professional development resource or as the basis for a deep group study of the standards for a particular grade. For teachers who are new to the classroom or the standards, the Study Guides introduce them not only to Eureka Math but also to the content of the grade level in a way they will find manageable and useful. Teachers familiar with the Eureka Math curriculum will also find this resource valuable as it allows for a meaningful study of the grade level content in a way that highlights the coherence between modules and topics. The Study Guides allow teachers to obtain a firm grasp on what it is that students should master during the year. The Eureka Math Curriculum Study Guide Grade 4 provides an overview of all of the Grade 4 modules including Place Value, Rounding and Algorithms for Addition and Subtraction, Unit Conversions, and Problem Solving with Metric Measurement, Multi-Digit Multiplication and Division, Angle Measure and Plane Figures, Fraction Equivalence, Ordering and Operations, Decimal Fractions, and Exploring Measurement with Multiplication.

Multiplication with Lesson Study Masami Isoda, Raimundo Olfos, 2020-11-23. This open access book is intended to assist teachers, teacher trainers, curriculum designers, editors, and authors of textbooks in developing strategies to teach the multiplication of natural numbers based on the experience of the Lesson Study in Japan. This approach to mathematics education dates back to the 1870s and reconciles the emphasis on problem solving with the treatment of the curricular contents. It has gained international recognition since the 1990s, and thanks to it, mathematics education in Japan has been recognized as one of the most efficient and innovative in the world. This growing international awareness has led to an effort to apply the principles of Lesson Study to other parts of the world, and this book shows how experienced authors from Brazil, Chile, Mexico, Spain, and Portugal have worked to adapt some of these methods and techniques to the Portuguese and Spanish-speaking countries of Ibero-America. Drawing on the impact of Lesson Study on government curriculum decisions and teacher behavior in Japanese classrooms, offering examples of lessons, lesson plans, and suggestions for teaching and presenting examples of the good reception of the principles of Lesson Study in Ibero-America. **Teaching Multiplication with Lesson Study: Japanese and Ibero-American Theories for Mathematics Education** shows how an efficient and cutting-edge experience in mathematics education can travel the world and help teachers in many different countries.

Improving Teacher Knowledge in K-12 Schooling Xiaoxia A. Newton, 2018-03-15. This volume examines how several key components of the mathematics education system in the United States fail to provide teachers with adequate and effective tools to teach mathematics in K-12 classrooms. These components consist of teachers

own learning experiences as students in K 12 classrooms their undergraduate or graduate trainings in mathematics and their in service professional development trainings Newton argues that unless we improve these system components as a whole and recognize the importance of teaching future mathematics teachers explicitly and rigorously the topics they are expected to teach teachers will continue to recycle a body of incoherent and incomprehensible mathematical knowledge to their students because these are the only types of mathematical knowledge they have at their disposal both in terms of what they themselves have learned as K 12 students and in terms of the mathematical resources available to them including the textbooks they rely on to teach as mathematics teachers
