Spitkovsky,2025-03-13 This volume which is dedicated to Yuri Karlovich on the occasion of his 75th birthday includes biographical material personal reminiscences and carefully selected papers The contributions constituting the core of this volume are written by mathematicians who have collaborated with Yuri or have been influenced by his vast mathematical work They are devoted to topics of Yuri Karlovich s work for five decades starting with his work on singular integral operators with shift then broadened to include Toeplitz Wiener Hopf Fourier and Mellin convolution and pseudodifferential operators factorisation of almost periodic matrix functions and local trajectory methods for the study of algebras of convolution and singular integral operators *Operator Theoretical Methods and Applications to Mathematical Physics* Israel Gohberg,Antonio, F. dos Santos,Frank-Olme Speck,Francisco Sepulveda Teixeira,Wolfgang L. Wendland,2012-12-06 This volume is devoted to the life and work of the applied mathematician Professor Erhard Meister 1930 2001 He was a member of the editorial boards of this book series Operator The ory Advances and Applications as well as of the journal Integral Equations and Operator Theory both published by Birkhauser now part of Springer Verlag Moreover he played a decisive role in the foundation of these two series by helping to establish contacts between Birkhauser and the founder and present chief editor of this book series after his emigration from Moldavia in 1974 The volume is divided into two parts Part A contains reminiscences about the life of E Meister including a short biography and an exposition of his professional work Part B displays the wide range of his scientific interests through eighteen original papers contributed by authors with close scientific and personal relations to E Meister We hope that a great part of the numerous features of his life and work can be re discovered from this book <u>Analysis of Toeplitz Operators</u> Albrecht Böttcher,Bernd Silbermann,2013-06-29 This book was originally intended as an extended version of our book Invertibility and Asymptotics of Toeplitz Matrices which appeared in 1983 We planned to discuss several topics in more detail but our main concern was to incorporate a whole series of new results obtained during the last few years However we soon realized that the program we had in mind required new thoughts from both the methodological and substantial point of view and so we decided to attempt writing a completely new book on the analysis of Toeplitz operators There are at least two reasons for the continuous and increasing interest in Toeplitz operators On the one hand Toeplitz operators are of importance in connection with a variety of problems in physics probability theory information and control theory and several other fields Although we shall not embark on these problems the selection of the material of this book is to a certain extent determined by such applications On the other hand besidesthe differential operators Toeplitz operators constitute one of the most important

classes of non selfadjoint operators and they are a fascinating example of the fruitful interplay between such topics as operator theory function theory and the theory of Banach algebras One main purpose of this book is to elucidate some of the ideas and methods illustrating just the latter aspect   **Approximation of Additive Convolution-Like Operators** Victor Didenko,Bernd Silbermann,2008-09-19 This book deals with numerical analysis for certain classes of additive operators and related equations including singular integral operators with conjugation the Riemann Hilbert problem Mellin operators with conjugation double layer potential equation and the Muskhelishvili equation The authors propose a unified approach to the analysis of the approximation methods under consideration based on special real extensions of complex C algebras The list of the methods considered includes spline Galerkin spline collocation qualocation and quadrature methods The book is self contained and accessible to graduate students   **The Extended Field of Operator Theory** Michael A. Dritschel,2007-06-25 This volume contains contributions originating from the International Workshop on Operator Theory and Its Applications IWOTA held in Newcastle upon Tyne in July 2004 The articles expertly cover a broad range of material at the cutting edge of functional analysis and its applications The works are written by world authorities in their specialities

Commutative Algebras of Toeplitz Operators on the Bergman Space Nikolai Vasilevski,2008-11-20 This unique book is devoted to the detailed study of the recently discovered commutative C algebras of Toeplitz operators on the Bergman space over the unit disk Surprisingly the key point to understanding their structure and classifying them lies in the hyperbolic geometry of the unit disk The book develops a number of important problems whose successful solution was made possible and is based on the specific features of the Toeplitz operators from these commutative algebras   *A Panorama of Modern Operator Theory and Related Topics* Harry Dym,Marinus A. Kaashoek,Peter Lancaster,Heinz Langer,Leonid Lerer,2012-02-01 This book is dedicated to the memory of Israel Gohberg 1928 2009 one of the great mathematicians of our time who inspired innumerable fellow mathematicians and directed many students The volume reflects the wide spectrum of Gohberg s mathematical interests It consists of more than 25 invited and peer reviewed original research papers written by his former students co authors and friends Included are contributions to single and multivariable operator theory commutative and non commutative Banach algebra theory the theory of matrix polynomials and analytic vector valued functions several variable complex function theory and the theory of structured matrices and operators Also treated are canonical differential systems interpolation completion and extension problems numerical linear algebra and mathematical systems theory   *Recent Trends in Toeplitz and Pseudodifferential Operators* Roland V. Duduchava,Israel Gohberg,Sergei M. Grudsky,Vladimir Rabinovich,2011-02-04 The aim of the book is to present new results in operator theory and its applications In particular the book is devoted to operators with automorphic symbols applications of the methods of modern operator theory and differential geometry to some problems of theory of elasticity quantum mechanics hyperbolic systems of partial differential equations with multiple characteristics Laplace Beltrami operators on manifolds with singular points Moreover the book

comprises new results in the theory of Wiener Hopf operators with oscillating symbols large hermitian Toeplitz band matrices commutative algebras of Toeplitz operators and discusses a number of other topics
