Failure Of Plastics:

Characterization and Failure Analysis of Plastics ASM International, Steve Lampman, 2003-01-01 The selection and application of engineered materials is an integrated process that requires an understanding of the interaction between materials properties manufacturing characteristics design considerations and the total life cycle of the product This reference book on engineering plastics provides practical and comprehensive coverage on how the performance of plastics is characterized during design property testing and failure analysis The fundamental structure and properties of plastics are reviewed for general reference and detailed articles describe the important design factors properties and failure mechanisms of plastics The effects of composition processing and structure are detailed in articles on the physical chemical thermal and mechanical properties Other articles cover failure mechanisms such as crazing and fracture impact loading fatigue failure wear failures moisture related failure organic chemical related failure photolytic degradation and microbial degradation Characterization of plastics in failure analysis is described with additional articles on analysis of structure surface analysis and fractography

Failure of Plastics and Rubber Products D. Wright, 2001-06 Plastics and rubbers together make up the most adaptable and varied class of materials available to product designers They may be transparent or opaque rigid or flexible lightweight insulating and weatherproof They are used in almost every industry and in every part of the home Applications range from the humble hot water bottle to the sheathing on a high voltage cable and from a simple scrubbing brush to a tank for storing hydrochloric acid Products may be disposable e g packaging goods or intended to last for decades such as a buried sewage pipe However it is this very diversity which makes materials selection so difficult and appropriate design so important Indeed the one thing that all these particular products have in common is their presence in this book of failures Failures due to degradation may result from exposure to the weather or an aggressive operating environment Alternatively they may be caused by the introduction of an external agent unforeseen by the product designer They may be rapid or very slow and they may result from a combination of factors In this book Dr Wright describes the following mechanisms of polymer degradation and then illustrates each failure mechanism with a number of case studies Thermo oxidation Photo oxidation Degradation due to ionising radiation Chemical attack Environmental stress cracking Other miscellaneous effects including treeing electrochemical degradation and biodegradation Many of the case studies are based on Dr Wrights own experiences whilst working at Rapra In each case he describes the circumstances of the failure and discusses both the consequences of the failure and the lessons that may be learned from it Most of the failed products are familiar to us all and his style is both readable and informative Photographs are included where available The book will be essential reading for designers engineers product specifiers and forensic engineers Materials suppliers and processors will also benefit from the pragmatic analysis and advice it contains It will also be of value to all students of polymer science and technology providing an essential insight into the practical application of plastics and rubbers and the potential problems

Finally it will be of interest to a much broader readership including anyone who ever wondered why things break and it should become a standard reference work in all technical libraries This book was written with the support of the UK Department of Trade and Industry It is intended to raise awareness of the causes and consequences of polymer product failures in order to reduce the future incidences of such failures and their considerable costs to industry Failure of Plastics Witold Brostow, Roger D. Corneliussen, 1986-01-01 **Handbook of Plastics Testing and Failure Analysis** Vishu Shah, 2007-02-26 Written in easy to read and use format this book updates and revises its bestselling predecessor to become the most complete comprehensive resource on plastics testing This book has an emphasis on significance of test methods and interpretation of results The book covers all aspects of plastics testing failure analysis and quality assurance including chapters on identification analysis failure analysis and case studies The book concludes with a substantial appendix with useful data charts and tables for ready reference Note CD ROM DVD and other supplementary materials are not included as part of eBook file Plastics Failure Analysis and Prevention John Moalli, 2001-12-31 This book contains analysis of reasons that cause products to fail General methods of product failure evaluation give powerful tools in product improvement Such methods discussed in the book include practical risk analysis failure mode and effect analysis preliminary hazard analysis progressive failure analysis fault tree analysis mean time between failures Wohler curves finite element analysis cohesive zone model crack propagation kinetics time temperature collectives quantitative characterization of fatigue damage and fracture maps Methods of failure analysis are critical to for material improvement and they are broadly discussed in this book Fractography of plastics is relatively a new field which has many commonalities with fractography of metals Here various aspects of fractography of plastics and metals are compared and contrasted Fractography application in studies of static and cycling loading of ABS is also discussed Other methods include SEM SAXS FTIR DSC DMA GC MS optical microscopy fatigue behavior multiaxial stress residual stress analysis punch resistance creep rupture impact oxidative induction time craze testing defect analysis fracture toughness activation energy of degradation Many references are given in this book to real products and real cases of their failure The products discussed include office equipment automotive compressed fuel gas system pipes polymer blends blow molded parts layered cross ply and continuous fiber composites printed circuits electronic packages hip implants blown and multilayered films construction materials component housings brake cups composite pressure vessels swamp coolers electrical cables plumbing fittings medical devices medical packaging strapping tapes balloons marine coatings thermal switches pressure relief membranes pharmaceutical products window profiles and bone cements *Plastics Institute of America Plastics Engineering, Manufacturing & Data Handbook* D.V. 000 figures and more than 400 tables Various plastic materials and their behavior patterns are reviewed Examples are provided of different plastic products and relating to them critical factors that range from meeting performance requirements in different environments to reducing costs and targeting for zero defects This book provides the reader with useful pertinent information readily available as summarized in the Table of Contents List of References and the Index

Plastics Failure Myer Ezrin, 2013-08-01 Plastics failure to a certain extent is the result of a phenomenal increase in the number and variety of applications in relatively few years The focus of this book is on actual field and product failures The treatment is comprehensive emphasizing cause and prevention The concept of the interdependence of material design and processing is applied to all examples and cases The how to of prevention is brought out as a logical extension of the cause of failure Contents Nature Causes and Consequences of Plastics Failure Fundamental Materials Variables Affecting Processing and Product Performance or Failure Failures Related to Design and Material Selection Examples Processing Related Factors to Failure Failure Related to Service Conditions Failure Analysis and Test Procedures Quality Control Legal Aspects of Plastic Product Liability and Failure Examples of Failures in Various Applications **Polymer Topics** Raymond A. Pearson, Hung-Jue Sue, Society of Plastics Engineers. Engineering Properties & Structure Division, 1996 Environmental Stress Cracking of Plastics D. C. Wright, 1996 Simultaneous action of stress and strain on plastics in contact with specific fluids causes the onset of cracking and embrittlement of plastic known as environmental stress cracking Since this is responsible for 15% of all failures of plastics components environmental stress cracking has long been the subject of intensive research This volume reviews factors that influence environmental stress cracking and the state of knowledge regarding many families of plastics Various types of damage from disfiguring to catastrophic are discussed in this volume with the period of time over which the damage occurs Plastics designers and specifiers will benefit from the wealth of information and data provided **Handbook of Plastics Failure Analysis** Friedrich Kurr, 2015 *Fracture and Failure of Plastics*, 1996 **Plastics Design Handbook** Marlene G.
