Fair Division and Collective Welfare Herve Moulin, 2004-08-20 The concept of fair division is as old as civil society itself Aristotle's equal treatment of equals was the first step toward a formal definition of distributive fairness The concept of collective welfare more than two centuries old is a pillar of modern economic analysis Reflecting fifty years of research this book examines the contribution of modern microeconomic thinking to distributive justice Taking the modern axiomatic approach it compares normative arguments of distributive justice and their relation to efficiency and collective welfare The book begins with the epistemological status of the axiomatic approach and the four classic principles of distributive justice compensation reward exogenous rights and fitness It then presents the simple ideas of equal gains equal losses and proportional gains and losses The book discusses three cardinal interpretations of collective welfare Bentham's utilitarian proposal to maximize the sum of individual utilities the Nash product and the egalitarian leximin ordering It also discusses the two main ordinal definitions of collective welfare the majority relation and the Borda scoring method The Shapley value is the single most important contribution of game theory to distributive justice A formula to divide jointly produced costs or benefits fairly it is especially useful when the pattern of externalities renders useless the simple ideas of equality and proportionality The book ends with two versatile methods for dividing commodities efficiently and fairly when only ordinal preferences matter competitive equilibrium with equal incomes and egalitarian equivalence The book contains a wealth of empirical examples and exercises

Barbanel,2005-01-24 What is the best way to divide a cake and allocate the pieces among some finite collection of players In this book the cake is a measure space and each player uses a countably additive non atomic probability measure to evaluate the size of the pieces of cake with different players generally using different measures The author investigates efficiency properties is there another partition that would make everyone at least as happy and would make at least one player happier than the present partition and fairness properties do all players think that their piece is at least as large as every other player's piece He focuses exclusively on abstract existence results rather than algorithms and on the geometric objects that arise naturally in this context By examining the shape of these objects and the relationship between them he demonstrates results concerning the existence of efficient and fair partitions **Theory and Applications of Models of Computation** Ding-Zhu Du,Donglei Du,Chenchen Wu,Dachuan Xu,2023-01-01 This book constitutes the refereed proceedings of the 17th Annual Conference on Theory and Applications of Models of Computation TAMC 2022 held as a virtual event in September 2022 The 33 full papers were carefully reviewed and selected from 75 submissions The main themes of the selected papers are computability complexity algorithms information theory and their extensions to machine learning theory and foundations of artificial intelligence *Handbook of Group Decision and Negotiation* D. Consolidation Olivia Johanna Erdélyi,2016-06-14 The book addresses the truly interdisciplinary and highly controversial subject of international financial regulation and supervision which has been at the center of academic political and public attention since the start of the current economic and financial crisis Drawing on international financial regulatory and supervisory experience and in line with the European Monetary Union s gradual transformation into a Genuine Economic and Monetary Union it proposes the transformation of the European financial supervisory framework into a hybrid twin peaks model to create the previously missing necessary legal foundation for the adoption of the so called Group Support Regime GSR The latter is a relatively simple and transparent capital management tool for re insurance groups operating in a parent subsidiary structure proposed by the European Commission under the new Solvency II insurance supervisory framework

which despite lengthy consideration was eventually rejected by Member States *Insurance, Biases, Discrimination and Fairness* Arthur Charpentier, 2024-05-13 This book offers an introduction to the technical foundations of discrimination and equity issues in insurance models catering to undergraduates postgraduates and practitioners It is a self contained resource accessible to those with a basic understanding of probability and statistics Designed as both a reference guide and a means to develop fairer models the book acknowledges the complexity and ambiguity surrounding the question of discrimination in insurance In insurance proposing differentiated premiums that accurately reflect policyholders true risk termed actuarial fairness or legitimate discrimination is economically and ethically motivated However such segmentation can appear discriminatory from a legal perspective By intertwining real life examples with academic models the book incorporates diverse perspectives from philosophy social sciences economics mathematics and computer science Although discrimination has long been a subject of inquiry in economics and philosophy it has gained renewed prominence in the context of big data with an abundance of proxy variables capturing sensitive attributes and artificial intelligence or specifically machine learning techniques which often involve less interpretable black box algorithms The book distinguishes between models and data to enhance our comprehension of why a model may appear unfair It reminds us that while a model may not be inherently good or bad it is never neutral and often represents a formalization of a world seen through potentially biased data Furthermore the book equips actuaries with technical tools to quantify and mitigate potential discrimination featuring dedicated chapters that delve into these methods **A Unified Framework for Pro-poor Growth Analysis** Boniface Essama-Nssah, 2004

Starting with a general impact indicator as an evaluation criterion Essama Nssah offers an integrative framework for a unified discussion of various concepts and measures of pro poor growth emerging from the current literature He shows that whether economic growth is considered pro poor depends fundamentally on the choice of evaluative weights In addition the author s framework leads to a new indicator of the rate of pro poor growth that can be interpreted as the equally distributed equivalent growth rate This is a distribution adjusted rate of growth that depends on the chosen level of inequality aversion Illustrations based on data for Indonesia in the 1990s show a strong link between growth and poverty reduction in that country A decomposition of the observed poverty outcomes reveals the extent to which changes in inequality have blunted the poverty impacts of both growth and contraction Finally the results also demonstrate that absolute and relative indicators of pro poor growth can lead to conflicting conclusions from the same set of facts This paper a product of the Poverty Reduction Group Poverty Reduction and Economic Management Network is part of a larger effort in the network to understand the distributional implications of economic growth World Bank web site
