Unconstrained Face Recognition Shaohua Kevin Zhou, Rama Chellappa, Wenyi Zhao, 2006-10-11 Face recognition has been actively studied over the past decade and continues to be a big research challenge Just recently researchers have begun to investigate face recognition under unconstrained conditions Unconstrained Face Recognition provides a comprehensive review of this biometric especially face recognition from video assembling a collection of novel approaches that are able to recognize human faces under various unconstrained situations The underlying basis of these approaches is that unlike conventional face recognition algorithms they exploit the inherent characteristics of the unconstrained situation and thus improve the recognition performance when compared with conventional algorithms Unconstrained Face Recognition is structured to meet the needs of a professional audience of researchers and practitioners in industry This volume is also suitable for advanced level students in computer science

Facial Analysis from Continuous Video with Application to Human-computer Interface Antonio Jose Colmenarez, 1999 **Facial Analysis from Continuous Video with Applications to Human-Computer Interface** Antonio J. Colmenarez, Ziyu Xiong, T-S. Huang, 2004-03-31 Computer vision algorithms for the analysis of video data are obtained from a camera aimed at the user of an interactive system It is potentially useful to enhance the interface between users and machines These image sequences provide information from which machines can identify and keep track of their users recognize their facial expressions and gestures and complement other forms of human computer interfaces Facial Analysis from Continuous Video with Applications to Human Computer Interfaces presents a learning technique based on information theoretic discrimination which is used to construct face and facial feature detectors This book also describes a real time system for face and facial feature detection and tracking in continuous video Finally this book presents a probabilistic framework for embedded face and facial expression recognition from image sequences Facial Analysis from Continuous Video with Applications to Human Computer Interfaces is designed for a professional audience composed of researchers and practitioners in industry This book is also suitable as a secondary text for graduate level students in computer science and engineering
