Marshall,2012-12-06 The papers contained herein were presented at the Fourth International Conference on Composite Structures ICCS 4 held at Paisley College of Technology Scotland in July 1987 The Conference was organised and sponsored by Paisley College of Technology It was co sponsored by the Scottish Development Agency the National Engineering Laboratory the US Air Force European Office of Aerospace Research and Development and the US Army Research Development and Standardisation Group UK It forms a natural and ongoing progression from the highly successful First Second and Third International Conferences on Composite Structures ICCS 1 ICCS 2 and ICCS 3 held at Paisley in 1981 1983 and 1985 respectively There is little doubt that composite materials are rightfully claiming a

prominent role in structural engineering in the widest sense Moreover the range and variety of useful composites has expanded to a level inconceivable a decade ago However it is also true that this increasing utilisation has generated an enhanced awareness of the manifold factors which dictate the integrity of composite structures This is indeed a healthy attitude to a relatively new dimension in structural engineering which will have an increasingly dominant role as the century progresses Both the diversity of application of composites in structural engineering and the endeavours which will ensure their fitness for purpose are reflected herein

Proceedings of First USA-USSR symposium on Fracture of Composite Materials George C. Sih, Vitauts P. Tamuzs, 1979-03-31 The current situation with regard to the use of high performance composites is one of seeking a reliable means of characterizing the fundamental properties and or behavior of composite materials The employment of such materials in vital structural applications require criteria as part of the materials selection and design procedures However the principal limitation of the many currently available procedures most of which were borrowed from the metal industry is its intrinsic restriction to single phase materials They cannot adequately account for the variations in the constituents or structure of the composite that can have a significant influence on its gross behavior Although a considerable amount of research has been conducted in the past with the objective of understanding composite material behavior for the most part the research efforts tended to cover too wide a spectrum of problems with little penetration into the fundamental aspects For this reason the investigators in this field have long felt the need to bring together a small group of experts to review the fundamentals discuss the problem areas and display the current developments The USA USSR Sympo on the fracture of Composite Materials was organized for this purpose There is the additional need to share this information with the new comers to the field as well as the oldtimers This is accomplished by publishing the symposium proceedings contained in the present volume A Russian translation of the papers in this volume will also be made available

Controlled Interphases in Composite Materials Hatsuo Ishida, 2012-12-06 The third International Conference on Composite Interfaces ICCI III was held under the auspices of ASM International The Aluminum Company of America Alcoa The Edison Polymer Innovation Co EPIC Case Western Reserve University Nippon Glass Fiber Co Nitto Boseki Co Office of Naval Research ONR SAMPE Japan Teijin Co Mobay Co Union Carbide Co and Vetrotex Sain Gobain The underlying philosophy of the conference continues to be the promotion of fundamental understanding of the structure and role of composite interfaces With the growth of composite interface studies the research direction naturally changes from characterization and understanding of interfacial structure to controlling this structure For this reason the conference was subtitled Controlled Interphase Structure The rather unfamiliar phrase interphase is used to emphasize the interfacial region whose properties are different from the bulk The importance of the interphase to the mechanochemical properties has been rapidly recognized among composite researchers in recent years The conference incorporated nine sessions No concurrent sessions were planned because of the strong interest among participants and organizers to intensify researches from different disciplines Papers presented were redistributed in Parts I through V Because of this both the conference and proceedings are not organized

based on the traditional disciplines or materials but rather around concepts
