*Climate Change Sensitive Ecosystems* Hui Zhang,Xiang Liu,Robert John,2023-11-27 Human activities such as agriculture and

climate change Thus it is important to quantify the key determinants of biodiversity ecosystem functioning and ecological

restoration of degraded plant communities in climate change sensitive ecosystems i e subalpine and alpine meadow

communities in Qinghai tropical rainforests and tropical mountains In this way effective management policy and methods can

be developed to reduce the influence of climate change on these climate change sensitive ecosystems The aforementioned

human activities continue to destroy and degrade plant communities and ecosystem functioning Climatic changes further

exacerbate negative impacts and may trigger rapid loss of species precipitate decline and changes in the flows of ecosystem

goods and services As the collective anthropogenic influence intensifies some ecosystems may be more sensitive than others

to these changes Ecosystems that contribute greatly to human well being through the delivery of biodiversity and ecosystem

benefits should be the focus of particular concern There are key knowledge gaps on the specific nature of anthropogenic

impacts species and ecosystem responses and possible management and mitigation measures Comprehensive documentation

of these aspects from highly sensitive regions and ecosystems is urgently needed particularly at fine scales which is relevant

for developing management and mitigation measures Pathways such as ecological restoration can offset some of the impacts

but even quantifying the impacts of observed and anticipated changes is far from adequate and other mitigation measures

groundbreaking focus is on the integration of structural and functional modeling for a living system such as a whole plant or a crop field a forest most of the time it has been believed among modeling practitioners that choices have to be made between the two this belief no more prevails in the era of integrative well conceptually grounded simulations The content of this book is sufficient for a non specialist to understand the fundamentals of mathematical modelling of plant architecture Readers or even software developers can supplement their knowledge by consulting the book
