Little America

Richard Evelyn Byrd Jr.

Little America:

Little America Erik Paul, 2006-09-20 Australia is one of the US's most staunch supporters. Australia has sent troops to Iraq and is an ally in the war on terror. Australian domestic policy also follows the US economic model as state industries and services have been privatised. Erik Paul dissects the relationship between Australia and the US. He explores how Australia has become a key player in maintaining American dominance in South East Asia and looks critically at the contrast between the Australian wealth and the comparative poverty of surrounding nations. Examining the influence of neoconservative imperialism on Australia's economic and military strategies, he draws some startling conclusions about future Australian relationships in East Asia, in particular its relationship with China. American hero and explorer Admiral Richard E. Byrd Jr. tells the story of his first journey through Antarctica and the founding of a series of camps and bases referred to as Little America. Over the years, many similar areas were developed as camps and research areas on Byrd's Antarctic missions, but the founding of Little America required great courage and leadership. In awe of the unforgiving landscape, he eagerly met its treacherous challenges. Byrd outlines the blueprint for his first mission to Antarctica and provides a glimpse into the obstacles he and his team overcame at the world's end. Reissued for today's readers, Admiral Byrd's classic explorations by land, air, and sea transport us to the farthest reaches of the globe. As companions on Byrd's journeys, modern audiences experience the polar landscape through Byrd's own struggles, doubts, revelations, and triumphs, and share the excitement of these timeless adventures. **Magnetograms and Hourly Values, Little America, Antarctica** U.S. Coast and Geodetic Survey. Chemical Profile of the Ross Ice Shelf at Little America V, Antarctica Chester C. Langway, M. Herron, J. H. Cragin, 1974. Measurements of the concentrations of Na, K, Mg²⁺ and Ca²⁺ were made on 28 samples from the 255 m deep ice core from Little America V. All concentrations decrease sharply with depth from the firn ice transition at 52 m to somewhere between 125 m and 150 m. From 150 m to 250 m, the cationic concentrations are relatively constant. This is interpreted to indicate that the ice above 125 m fell as snow on the Ross Ice Shelf and that ice below 150 m originated inland on Marie Byrd Land. Author
