**Shadows and Cypress** Alan Brown, 2009-09-28 From backwaters as dark as a cypress swamp to nooks as mysterious as a musty college library southerners have conjured spirits and told ghost stories Shadows and Cypress Southern Ghost Stories is a Dixie s ance that summons ghost tales from Alabama Arkansas Florida Georgia Kentucky Louisiana Mississippi North Carolina South Carolina Tennessee Texas and Virginia Collecting more than a dozen stories from each state this book channels the South s entire panorama of creepy locales into one volume The limestone caves of Kentucky the swamps of Louisiana and Florida the pine hills and hollows of Appalachia and the plains of Texas these are perfect haunts for a host of narratives about visitors from the spirit world The many cultures that converged in the American South enriched the region s ghost stories Shadows and Cypress taps African American French Hispanic and Scotch Irish storytelling traditions to capture the distinctive signatures that each has left on ghostlore Throughout the region the southern ghost story is hardly a curio from the crypt It is still alive and well Folklorist Alan Brown draws stories from crannies as contemporary as the college dormitory or cars parked on a lover s lane To give the reader the unique experience of hearing a classic ghost story told Brown presents these tales exactly as they were recorded in his field research or as archived in the trove of the WPA oral collections A wide variety of specters found only in this region arise in Shadows and Cypress The fillet and loogaroo from

encroachments on our immediate surroundings from climate change digital communication and geopolitical dislocation seem at once remote and intimate invisible yet urgent Thus the book also asks whether recent portrayals of Gothic journeys now pose different questions to the reader

in numerical analysis newton s method also known as the newton raphson method named after isaac newton and joseph raphson is a root finding algorithm which produces successively better approximations to the roots or zeroes of a real valued function the most basic version starts with a single variable function  $f$  defined for a real variable  $x$  the function s derivative  $f'$  and an initial guess  $x_0$  for a root of  $f$  if the function satisfies sufficient assumptions and the initial guess is close
