NASA 50th Anniversary Proceedings: NASA's First 50 Years: Historical Perspectives Steven J. Dick, National Aeronautics and Space Administration, 2010-07-07 On 29 July 1958 President Dwight D Eisenhower signed the National Aeronautics and Space Act creating the National Aeronautics and Space Administration NASA which became operational on 1 October of that year Over the next 50 years NASA achieved a set of spectacular feats ranging from advancing the well established field of aeronautics to pioneering the new fields of Earth and space science and human spaceflight In the midst of the geopolitical context of the Cold War 12 Americans walked on the Moon arriving in peace for all mankind Humans saw their home planet from a new perspective with unforgettable Apollo images of Earthrise and the Blue Marble as well as the pale blue dot from the edge of the solar system A flotilla of spacecraft has studied Earth while other spacecraft have probed the depths of the solar system and the universe beyond In the 1980s the evolution of aeronautics gave us the first winged human spacecraft the Space Shuttle and the International Space Station stands as a symbol of human cooperation in space as well as a possible way station to the stars With the Apollo fire and two Space Shuttle accidents NASA has also seen the depths of tragedy In this volume a wide array of scholars turn a critical eye toward NASA s first 50 years probing an institution widely seen as the premier agency for exploration in the world carrying on a long tradition of exploration by the United States and the human species in general Fifty years after its founding NASA finds itself at a crossroads that historical perspectives can only help to illuminate

Big Data, Little Data, No Data Christine L. Borgman, 2017-02-03 An examination of the uses of data within a changing knowledge infrastructure offering analysis and case studies from the sciences social sciences and humanities Big Data is on the covers of Science Nature the Economist and Wired magazines on the front pages of the Wall Street Journal and the New York Times But despite the media hyperbole as Christine Borgman points out in this examination of data and scholarly research having the right data is usually better than having more data little data can be just as valuable as big data In many cases there are no data because relevant data don t exist cannot be found or are not available Moreover data sharing is difficult incentives to do so are minimal and data practices vary widely across disciplines Borgman an often cited authority on scholarly communication argues that data have no value or meaning in isolation they exist within a knowledge infrastructure an ecology of people practices technologies institutions material objects and

relationships After laying out the premises of her investigation six provocations meant to inspire discussion about the uses of data in scholarship Borgman offers case studies of data practices in the sciences the social sciences and the humanities and then considers the implications of her findings for scholarly practice and research policy To manage and exploit data over the long term Borgman argues requires massive investment in knowledge infrastructures at stake is the future of scholarship

The International Astronomical Union Johannes Andersen,David Baneke,Claus Madsen,2019-02-20 The International Astronomical Union IAU was founded in 1919 in the wake of the First World War together with its sister Unions in related natural sciences It will thus turn 100 years in 2019 Written by a mixed team of insiders and outsiders this book presents the IAU in the changing context of the historical scientific and technological development of astronomy during the past 100 years While much important scientific progress took place already before 1945 the book naturally focuses on the accelerating evolution during the second half of the century In the past few decades the previously narrow IAU focus on organising professional astronomy has broadened to include societally relevant activities such as addressing the hazard of asteroid impacts the planetary status of Pluto in the Solar System and the hugely successful International Year of Astronomy Most recently it is spearheading a combination of science literacy and public outreach The book will be of interest to professional astronomers as well as an astronomically interested general audience The book features live personal interviews with as many of the key actors as still possible

Infrared Astronomy - Seeing the Heat David L. Clements,2014-11-21 Uncover the Secrets of the Universe Hidden at Wavelengths beyond Our Optical Gaze William Herschel s discovery of infrared light in 1800 led to the development of astronomy at wavelengths other than the optical Infrared Astronomy Seeing the Heat from William Herschel to the Herschel Space Observatory explores the work in astronomy that relies on observations in the infrared Author David L Clements a distinguished academic and science fiction writer delves into how the universe works from the planets in our own Solar System to the universe as a whole The book first presents the major telescopes in the world of observational infrared astronomy explains how infrared light is detected through various kinds of telescopes and describes practical problems that send infrared astronomers to the tops of mountains and their telescopes into orbit and beyond Much of the book focuses on what infrared astronomers find in their observations You ll discover what infrared astronomy reveals about the planets moons and other bodies that constitute our Solar System star formation and stellar evolution the processes that shape galaxies and dark energy and dark matter Infrared astronomy has revolutionized our understanding of the universe and has become essential in studying cosmology Accessible to amateur astronomers this book presents an overview of the science and technology associated with infrared astronomy With color figures it shows you how infrared astronomy provides insights into the workings of the universe that are unavailable at other wavelengths

Organizations and Strategies in Astronomy 6 Andre Heck,2006-01-16 When I was a child growing up in South America I often went camping in the wild and hence had direct access to the wondrous Southern sky the Southern Cross was all mine at the time Little did I

know then that the study of the sky would take such a huge importance in my life and that in the end astronomy and astrophysics would in many ways become my country and my religion I have lived in several different countries and when asked my nationality I am always very tempted to reply astronomer I started as a theorist and my only dream in my youth was to spend nights thinking and calculating with paper and pencil and to have the impression by dawn that I had understood something new So at the time astronomy was seen or dreamt by me as a solitary endeavour with periodic encounters with my wise adviser and professors it is this model that I adopted when doing my PhD work My generation has lived through many revolutions of all kinds Those in astronomy I believe remain particularly remarkable and I am a true product of them Now I elect to live and work in large organizations and to share my endeavours with many people And I relish the series of Andr e Heck on Organizations and Strategies in Astronomy which help us recover our memories reconstitute our own story and read with glee about our neighbouring or far away colleagues

Big Science and Research Infrastructures in Europe Katharina C. Cramer,Olof Hallonsten,2020-08-28 This thought provoking book expands on the notion that Big Science is not the only term to describe and investigate particularly large research projects scientific collaborations and facilities It investigates the significant overlap between Big Science and Research Infrastructures RIs in a European context since the early twenty first century Contributions to this innovative book not only augment the study of Big Science with new perspectives but also launch the study of RIs as a promising new line of inquiry

Coloring the Universe Travis Rector,Kimberly Arcand,Megan Watzke,2015-11-15 With a fleet of telescopes in space and giant observatories on the ground professional astronomers produce hundreds of spectacular images of space every year These colorful pictures have become infused into popular culture and can found everywhere from advertising to television shows to memes But they also invite questions Is this what outer space really looks like Are the colors real And how do these images get from the stars to our screens Coloring the Universe uses accessible language to describe how these giant telescopes work what scientists learn with them and how they are used to make color images It talks about how otherwise unseeable rays such as radio waves infrared light X rays and gamma rays are turned into recognizable colors And it is filled with fantastic images taken in far away pockets of the universe Informative and beautiful Coloring the Universe will give space fans of all levels an insider's look at how scientists bring deep space into brilliant focus

A Grand and Bold Thing Ann K. Finkbeiner,2010-08-17 LATE IN THE TWENTIETH CENTURY what had been a fevered pace of discovery in astronomy for many years had slowed The Hubble Space Telescope continued to produce an astonishing array of images but the study of the universe was still fractured into domains measuring the universe's expansion rate the evolution of galaxies in the early universe the life and death of stars the search for extrasolar planets the quest to understand the nature of the elusive dark matter So little was understood still about so many of the most fundamental questions foremost among them What was the overall structure of the universe Why had stars formed into galaxies and galaxies into massive clusters What was needed

thought visionary astronomer Jim Gunn recently awarded the National Medal of Science was a massive survey of the sky a kind of new map of the universe that would be so rich in detail and cover such a wide swath of space be so grand and bold that it would allow astronomers to see the big picture in a whole new way So was born the Sloan Digital Sky Survey a remarkable undertaking bringing together hundreds of astronomers and launching a new era of supercharged astronomical discovery an era of e science that has taken astronomy from the lonely mountaintop observatory to the touch of your fingertips Critically acclaimed science writer Ann Finkbeiner tells the inside story of the Sloan and how it is revolutionizing astronomy The Sloan stitched together images of deep space taken over the course of five years providing a remarkably detailed three dimensional map of a vast territory of the universe all digitized and downloadable for easy searching on a personal computer and available not only to professional astronomers but to the public as well Bringing together for the first time images of many millions of galaxies including the massive structure known as the Sloan Great Wall of galaxies never seen before the Sloan is allowing astronomers and armchair enthusiasts alike to watch the universe grow up providing so many discoveries at such a fast pace that as one astronomer said it s like drinking out of a fire hose They are watching galaxies forming and galaxies merging with other galaxies seeing streams of stars swirling out from galaxies and forming a new understanding of how the smooth soup of matter that emerged from the Big Bang evolved into the universe as we know it Ann Finkbeiner brings the excitement and the extraordinary potential of this new era of astronomy vividly to life and allows all readers to understand how they too can become part of the discovery process A Grand and Bold Thing is vital reading for all

Big Science Transformed Olof Hallonsten,2016-10-15 This book analyses the emergence of a transformed Big Science in Europe and the United States using both historical and sociological perspectives It shows how technology intensive natural sciences grew to a prominent position in Western societies during the post World War II era and how their development cohered with both technological and social developments At the helm of post war science are large scale projects primarily in physics which receive substantial funds from the public purse Big Science Transformed shows how these projects popularly called Big Science have become symbols of progress It analyses changes to the political and sociological frameworks surrounding publicly funding science and their impact on a number of new accelerator and reactor based facilities that have come to prominence in materials science and the life sciences Interdisciplinary in scope this book will be of great interest to historians sociologists and philosophers of science

Seigny, 2016-05-05 President Kennedy's announcement that an American would walk on the Moon before the end of the 1960s took the scientific world by surprise The study of the Moon and planets had long fallen out of favor with astronomers they were the stuff of science fiction not science An upstart planetary laboratory in Tucson would play a vital role in the nation's grand new venture and in doing so it would help create the field of planetary science Founded by Gerard P Kuiper in 1960 the Lunar and Planetary Laboratory LPL at the University of Arizona broke free from traditional astronomical techniques to embrace a wide range of disciplines necessary to the study of planets including geology atmospheric sciences and the elegant emerging technology of spacecraft Brash optimistic young students crafted a unique sense of camaraderie in the fledgling institution Driven by curiosity and imagination LPL scientists lived through and indeed made happen the shattering transition in which Earth's nearest neighbors became more than simple points of light in the sky Under Desert Skies tells the story of how a small corner of Arizona became Earth's ambassador to space From early efforts to reach the Moon to the first glimpses of Mars's bleak horizons and Titan's swirling atmosphere to the latest ambitious plans to touch an asteroid LPL's history encompasses humanity's unfolding knowledge about our place in the universe
