

ГІПОТЕЗИ ФОРМУВАННЯ СОНЯЧНОЇ СИСТЕМИ

Це питання хвилювало астрономів з давніх часів. Нині існує чимало теорій щодо походження Сонячної системи. Розглянемо найвідоміші з них.

Найпопулярнішою в сучасній астрономії є небуллярна гіпотеза, запропонована 1775 р. видатним німецьким філософом Іммануїлом Кантом. Він припустив, що Сонячна система виникла з гігантської холодної пилової хмари. Її частки перебували в постійному безладному русі, взаємно притягуючи одна одну, зіткалися, злипалися, утворюючи згущення, які поступово зростали, ущільнювалися і згодом стали основами Сонця й планетам.

Forest Vegetation of Northeast Asia Jirí Kolbek,M. Srutek,Elgene E. O. Box,2013-03-14 When two of us Jifi Kolbek Miroslav Sriltek were working in North Korea on the Czech Slovak field expeditions of the early 1990s we did not think initially of comparing our results with the vegetation of surrounding areas or of writing a book Our efforts mainly involved observing and documenting the vegetation as completely as possible and initial recognition of vegetation units At first we focused on the most obvious vegetation types but eventually also any important types that we could discern Later we focused more on forests since almost all of northeastern Asia has forest potential and forests still do form the landscape matrix in most areas First we studied suburban woods and forests most of which are strongly affected by human activities Later though we also had chances to visit and study lovely mountain regions including Myohyang san Kumgang san Su jang san and the high especially beautiful Changbai shan on the border between North Korea and China The Changbai shan is the highest mountain system in the Korean Peninsula including the highest peak Paektu san We gradually changed our goal from an evaluation of forest data from North Korea to comparison with available field data and literature sources from comparable surrounding areas These include South Korea the Russian Far East northeastern China Manchuria and northern Japan including the Kuril Islands Finally we decided to prepare a preliminary survey of the forest vegetation of the Russian Far East and eventually of all of northeastern Asia which would be published in English A Russian Perspective on Theoretical Archaeology Stephen Leach,2016-07-01 Both the work and the life of Leo S Klejn Russia's foremost archaeological theorist remain generally unrecognized by Western scholars Until now In this biography and summary of his work Stephen Leach outlines Klejn's wide ranging theoretical contributions on the place and nature of archaeology The book details Klejn's diverse work on ethnogenesis migration Homeric studies pagan Slavic religion homosexuality and the history of archaeology his life challenges as a Russian Jewish scholar jailed for homosexuality by the KGB and for his challenges to Marxist dogma his key contributions to theoretical archaeology and in particular Klejn's comparisons between archaeologists and forensic scientists Kwartalnik historii nauk i techniki ,2010

A History of Modern Planetary Physics Stephen G. Brush,1996-04-26 Where did we come from Before there was life there had to be something to live on a planet a solar system During the past 200 years astronomers and geologists have developed and tested several different theories about the origin of the solar system and the nature of the Earth Did the Earth and other planets form as a by product of a natural process that formed the Sun Did the solar system come into being as the result of catastrophic encounter of two stars Is the inside of the Earth solid liquid or gaseous The three volumes that make up A History of Modern Planetary Physics present a survey of these theories Nebulous Earth follows the development of the nineteenth century's most popular explanation for the origin of the solar system Laplace's Nebular Hypothesis This theory supposes that a flattened mass of gas extending beyond Neptune's orbit cooled and shrank throwing off in the process successive rings that in time coalesced to form several planets

Muslims on the Volga in the Viking Age Jonathan Shepard,Luke Treadwell,2023-09-21 The year 922 saw a series of remarkable face to face encounters in the steppes between Bukhara and the Middle Volga Ibn Fadlan was an intrepid member of a diplomatic and religious mission from the distant caliphate in Baghdad to the ruler of the Volga Bulgars His account gives a vivid eyewitness description of the peoples he came upon whose appearance rituals and filthy habits both fascinate and appal and a famous depiction of a Viking Rus ship burial It is unique testimony to burgeoning exchanges between several different cultures and to the emergence of new political structures on the steppes Yet the account survives only as part of a later composite work raising questions of meaning and historical interpretation This pioneering interdisciplinary study of Ibn Fadlan s text and the world he surveyed draws on a variety of specialists to give readers both the bigger picture of cultural and economic change in Eurasia Byzantium and the Muslim world and hard facts in the form of archaeological and numismatic data

Einstein Studies in Russia Yuri Balashov, Vladimir Pavlovich Vizgin, 2002 This volume presents a selection of contributions by Russian scholars, historians and philosophers to science, to the Einstein Studies industry broadly construed. This work explores the historical and foundational issues in general relativity and relativistic cosmology. Einstein's contributions to early quantum mechanics and the rise of Dirac's quantum electrodynamics. It also includes a detailed description of the physics colloquium Einstein established and coordinated in 1912-1913 and comments on his brief interest in the construction of the plane wing in 1916. Most scholars' materials from various Russian archives shed new light on the famous exchange regarding the first evolutionary cosmological models between Einstein and Alexander Friedmann in the early 1920s and on the role of Boris Podolsky and Vladimir Fock in the emergence of quantum electrodynamics. The little known correspondence between Einstein and a famous German pilot Paul Erhardt suggests that during World War I the former was involved with aero and hydrodynamics research and ways of improving airplane design. Other articles introduce new approaches to important foundational questions in general relativity and cosmology

Diachronic Interpretation of the Nostratic Macrofamily Yan Kapranov, Bożena Iwanowska, Bolesław Cieślik, 2024-06-17 This monograph presents a groundbreaking exploration into the Nostratic macrofamily, a concept that proposes a common ancestral language for several of the world's foremost language families. The study delves deep into the roots of Altaic, Afro-Asiatic, Dravidian, Eskimo-Aleut, Indo-European, Kartvelian, and Uralic languages, offering a unique perspective on their interconnections and evolutionary paths. The authors

examine five pivotal Nostratic etymons from the Swadesh index to illustrate the shared cognitive frameworks of these diverse linguistic groups This research challenges conventional perspectives on language evolution and introduces new methodologies in cognitive macro comparative studies Key to the work is the hypothesis of divergent convergent and convergent divergent evolutionary patterns stemming from a common Nostratic origin Beyond linguistics this study offers insights into human cognitive development language formation and change mechanisms

The Typology of Reflexives

Emma Geniusiené,2011-11-21 Research on language universals and research on linguistic typology are not antagonistic but rather complementary approaches to the same fundamental problem the relationship between the amazing diversity of languages and the profound unity of language Only if the true extent of typological divergence is recognized can universal laws be formulated In recent years it has become more and more evident that a broad range of languages of radically different types must be carefully analyzed before general theories are possible Typological comparison of this kind is now at the centre of linguistic research The series empirical approaches to language typology presents a platform for contributions of all kinds to this rapidly developing field The distinctive feature of the series is its markedly empirical orientation All conclusions to be reached are the result of a deepened study of empirical data General problems are focused on from the perspective of individual languages language families language groups or language samples Special emphasis is given to the analysis of phenomena from little known languages which shed new light on long standing problems in general linguistics The series is open to contributions from different theoretical persuasions It thus reflects the methodological pluralism that characterizes the present situation Care is taken that all volumes be accessible to every linguist and moreover to every reader specializing in some domain related to human language A deeper understanding of human language in general based on a detailed analysis of typological diversity among individual languages is fundamental for many sciences not only for linguists Therefore this series has proven to be indispensable in every research library be it public or private which has a specialization in language and the language sciences To discuss your book idea or submit a proposal please contact Birgit Sievert
