The Cambridge History of Latin America Leslie Bethell,1984 This volume examines Latin American history from c 1870 to 1930

Political Mobilization of the Venezuelan Peasant John Duncan Powell,1971 In the first part of this pioneering study John Duncan Powell traces the formation of a successful alliance between the peasant masses who sought land reform and a small urban elite which desperately needed a political power base Part II is devoted to an empirical structural functional analysis of the alliance

Hamiltonian Systems with Three or More Degrees of Freedom Carles Simó,2012-12-06 A survey of current knowledge about Hamiltonian systems with three or more degrees of freedom and related topics The Hamiltonian systems appearing in most of the applications are non integrable Hence methods to prove non integrability results are presented and the different meaning attributed to non integrability are discussed For systems near an integrable one it can be shown that under suitable conditions some parts of the integrable structure most of the invariant tori survive Many of the papers discuss near integrable systems From a topological point of view some singularities must appear in different problems either caustics geodesics moving wavefronts etc This is also related to singularities in the projections of invariant objects and can be used as a signature of these objects Hyperbolic dynamics appear as a source on unpredictable behaviour and several mechanisms of hyperbolicity are presented The destruction of tori leads to Aubrey Mather objects and this is touched on for a related class of systems Examples without periodic orbits are constructed against a classical conjecture Other topics concern higher dimensional systems either finite networks and localised vibrations on them or infinite like the quasiperiodic Schrödinger operator or nonlinear hyperbolic PDE displaying quasiperiodic solutions Most of the applications presented concern celestial mechanics problems like the asteroid problem the design of spacecraft orbits and methods to compute periodic solutions

Modern Methods of Analytical Mechanics and their Applications Valentin V. Rumyantsev,Alexander V. Karapetyan,2014-05-04 The volume aims at giving a comprehensive and up to date view of modern methods of analytical mechanics general equations invariant objects stability and bifurcations and their applications rigid body dynamics celestial mechanics multibody systems etc The course is at an advanced level It is designed for postgraduate students research engineers and academics that are familiar with basic concepts of analytical dynamics and stability theory Although the course deals with mechanical problems most of the concepts and methods involved are equally applicated to general dynamical systems

The Enduring Legacy Miguel Tinker Salas,2009-05-11 Oil has played a major role in Venezuela's economy since the first gusher was discovered along Lake Maracaibo in 1922 As Miguel Tinker Salas demonstrates oil has also transformed the country's social cultural and political landscapes In *The Enduring Legacy* Miguel Tinker Salas traces the history of the oil industry's rise in Venezuela from the beginning of the twentieth century paying particular attention to the experiences and perceptions of industry employees both foreign and Venezuelan He reveals how class ambitions and corporate interests combined to reshape many Venezuelans ideas of citizenship Middle class Venezuelans

embraced the oil industry from the start anticipating that it would transform the country by introducing modern technology sparking economic development and breaking the landed elites stranglehold Eventually Venezuelan employees of the industry found that their benefits including relatively high salaries fueled loyalty to the oil companies That loyalty sometimes trumped allegiance to the nation state North American and British petroleum companies seeking to maintain their stakes in Venezuela promoted the idea that their interests were synonymous with national development They set up oil camps residential communities to house their workers that brought Venezuelan employees together with workers from the United States and Britain and eventually with Chinese West Indian and Mexican migrants as well Through the camps the companies offered not just housing but also schooling leisure activities and acculturation into a structured corporate way of life Tinker Salas contends that these practices shaped the heart and soul of generations of Venezuelans whom the industry provided with access to a middle class lifestyle His interest in how oil suffused the consciousness of Venezuela is personal Tinker Salas was born and raised in one of its oil camps

Libration Point Orbits and Applications Gerard Gómez, Martin Wen-Yu Lo, Josep J. Masdemont, 2003 This book presents the state of the art in numerical and analytical techniques as well as future trends associated with mission design for libration point orbits It contains papers explaining theoretical developments and their applications including the accurate description of some actual libration point missions of ESA and NASA The existing software in the field and some applications beyond the neighborhood of the Earth are also presented Special emphasis is placed on the use of dynamical systems methodology in the libration point orbits mission design

Dynamics and Mission Design Near Libration Points: Advanced methods for triangular points Gerard Gómez, 2001 The aim of this book is to explain analyze and compute the kinds of motions that appear in an extended vicinity of the geometrically defined equilateral points of the Earth Moon system as a source of possible nominal orbits for future space missions The methodology developed here is not specific to astrodynamics problems The techniques are developed in such a way that they can be used to study problems that can be modeled by dynamical systems

Astrodynamics Network AstroNet-II Gerard Gómez, Josep J. Masdemont, 2016-07-29 These are the proceedings of the AstroNet II International Final Conference This conference was one of the last milestones of the Marie Curie Research Training Network on Astrodynamics AstroNet II that has been funded by the European Commission under the Seventh Framework Programme The aim of the conference and thus this book is to communicate work on astrodynamics problems to an international and specialised audience The results are presented by both members of the network and invited specialists The topics include trajectory design and control attitude control structural flexibility of spacecraft and formation flying The book addresses a readership across the traditional boundaries between mathematics engineering and industry by

The Role of Halo Substructure in Gamma-Ray Dark Matter Searches Miguel A. Sánchez-Conde,Michele Doro,2020-05-28 An important open research topic today is to understand the relevance that dark matter halo substructure may have for dark matter searches In the standard cosmological model halo substructure or subhalos are predicted to be largely abundant inside larger halos for example galaxies such as ours and are thought to form first and later merge to form larger structures Dwarf satellite galaxies the most massive exponents of halo substructure in our own galaxy are already known to be excellent targets for dark matter searches and indeed they are constantly scrutinized by current gamma ray experiments in the search for dark matter signals Lighter subhalos not massive enough to have a visible counterpart of stars and gas may be good targets as well given their typical abundances and distances In addition the clumpy distribution of subhalos residing in larger halos may boost the dark matter signals considerably In an era in which gamma ray experiments possess for the first time the exciting potential to put to test the preferred dark matter particle theories a profound knowledge of dark matter astrophysical targets and scenarios is mandatory should we aim for accurate predictions of dark matter induced fluxes for investing significant telescope observing time on selected targets and for deriving robust conclusions from our dark matter search efforts In this regard a precise characterization of the statistical and structural properties of subhalos becomes critical In this Special Issue we aim to summarize where we stand today on our knowledge of the different aspects of the dark
