**Advanced Acupuncture Research: From Bench to Bedside** Ying Xia, 2022-07-26 Written by over seventy scientists and clinicians worldwide from China USA Germany Canada Japan and other countries this monograph with nearly 450 figures and tables covers a wide range of advanced progress in acupuncture research from experimental research to clinical applications In addition to exploring the histopathological basis for acupuncture and mathematical simulation of acupoint response to stimulation initiation and transduction of acupuncture signals and cellular mechanisms during acupuncture effects as well as chemical and physical characteristics of moxibustion on acupoints are broadly discussed The topics also include novel data on acupuncture effect with advanced imaging techniques a unique understanding of meridian viscera correlation specific interactions between meridians and neurosensory organs within the system of homeostatic regulation and the acupuncture induced influences on autonomic function Several chapters introduce specific approaches with dry needling silver needling and stainless needling for certain diseases such as myofascitis supportive care for breast

cancer and chemotherapy induced peripheral neuropathy as well as perioperative care of surgical patients Moreover this book discusses recent research on acupuncture therapy and potential mechanisms for a number of severe and refractory neurological disorders including hyperactivity of hypothalamic pituitary adrenal axis orofacial pain chronic pain itch multiple sclerosis autism spectrum disorders cerebral palsy depressive disorders Alzheimer s disease and ischemic brain injury The vast amount of information offered in this book provides a comprehensive perspective on advanced acupuncture research to not only acupuncturists but also to neuroscientists neurologists and other clinicians For medical students and graduate and undergraduate students majoring in biology physiology and neuroscience this book offers an advanced course in learning about the mechanism driven advances in alternative and complementary medicine Basics of Acupuncture Gabriel Stux,Bruce Pomeranz,2013-11-11 In 1987 our first book *Acupuncture Textbook and Atlas* received rave reviews e g in New England Journal of Medicine This prompted us to write this smaller affordable version in order to reach a wider audience The smaller format has been so successful that we are now into our fourth revised edition This has given us the opportunity to update and improve the book For example numerous new references to scientific advances have been added Also the section on traditional Chinese medicine TCM was added because it gives a more complete picture of the current practice of acupuncture Acupuncture has come a long way since our first book in 1987 There has been a surge of interest in treating drug addictions by ear acupuncture in 450 centers world wide The treatment of nausea and vomiting has been so well tested scientifically that the FDA USA is considering making this the major indication for acupuncture in America Research into its efficacy for neurological and pulmonary diseases is also gaining credibility No longer is chronic pain the only scientifically acceptable use for acupuncture based on the endorphin mechanism *Application and Evaluation of Acupuncture in the Treatment of Neurological Diseases* Liming Lu,Nenggui Xu,Myeong Soo Lee,Chunzhi Tang,Yong Tang,Bing Zhu,2023-06-21 Neurological disorders such as Alzheimer s disease and Parkinson s disease are an important cause of disability and death worldwide and pose a serious burden on the global health system over the past 30 years Acupuncture as the most widely used traditional Chinese medicine therapy in the world has been widely used in 183 countries and regions Acupuncture can treat more than 300 kinds of diseases especially for neurological diseases Due to the unique advantages of acupuncture such as good therapeutic effect and low side effects many researchers have conducted extensive clinical studies on the effectiveness and safety of acupuncture in the treatment of neurological diseases laying a foundation for the practicability and scientific vigor of this complementary and alternative therapeutic approach There are still many problems unanswered in the current clinical research on acupuncture for the treatment of neurological diseases First of all clinical research is lagging behind due to the lack of emphasis on modern advanced methods and analytical techniques e g artificial intelligence omics analysis bioinformatics analysis data mining and multidisciplinary integration process Secondly the quality of reports on most clinical studies of acupuncture treatment for neurological diseases is extremely low Most clinical studies have not adopted

standardized methodological evaluations authoritative disease diagnosis standards and efficacy evaluation standards The lack of compliance regulations and strict study design reduces the accuracy and authenticity of the research Thirdly there is a lack of integrated assessment of the distribution of evidence for acupuncture treatment of neurological diseases Therefore strictly designed clinical research and in depth and systematic analysis method are currently needed to provide high quality evidence for acupuncture treatment of neurological diseases In this Research Topic we hope to further understand the role of acupuncture in the treatment of neurological diseases through clinical research and secondary research The range of acupuncture includes manual acupuncture electro acupuncture body needling auricular acupuncture scalp acupuncture laser acupuncture and acupressure etc Neurological diseases include stroke meningitis encephalitis tetanus Alzheimer s disease and other dementias Parkinson s disease epilepsy multiple sclerosis motor neurone disease migraine tense type headaches headaches from drug overuse and others
