The *Handbook of Biological Psychiatry* is a six-volume compilation that, according to the editors' introduction in volume I, "attempts to summarize and evaluate the outcome of over 20 years of brain and behavior research, with special reference to its relevance for the psychiatric and neurologic patient." The editors further state, "We did not intend a cursory review of the entire field, exhausting to even the dedicated reader. Rather, we sought a balanced presentation of the various topics . . . a textbook of research strategies and technologies . . . a useful bibliography of key papers, reviews, and books." In these six volumes, with their more than 100 authors, 91 chapters, and 3,000-plus pages, the editors have come as close to this goal as is perhaps humanly possible. In a field as rapidly developing as biological psychiatry, asking of this set of volumes that they be not only comprehensive in their scope but also fresh and timely in their content is about as reality-based as asking our president to both balance the federal budget and restore economic prosperity to the country.

The editors have done an admirable job of assembling a *Who's Who* in biological psychiatry as their authors. Scientists from many countries, both clinicians and basic laboratory workers, have participated. The *Handbook* has a grand design: the first volume describes the other disciplines from which biological psychiatry derives its methods and data; volumes II, III, and IV focus on the psychophysiological, genetic, neuroendocrinologic, and chemical aspects, respec-

tively, of brain mechanisms and abnormal behavior; volume V is a general overview of drug treatment in psychiatry; and volume VI covers additional aspects of psychotropic drugs as well as some of the other somatic therapies used in psychiatry (ECT, psychosurgery, sleep deprivation therapy). The second volume has already been reviewed in the *Journal* (1); the present review assesses volumes I and III through VI.

Volume I covers disciplines relevant to biological psychiatry. E. Robins and V. Ziegler discuss the history of biological psychiatry. B. Andersen presents basic concepts of statistical analysis. R.M. Post and D.L. Murphy use studies of CSF metabolites and blood cell enzymes to exemplify the principles of research planning. M. Hamilton presents a concise summary of psychological measurement techniques (rating scales) in psychiatry. A.F. Sanders offers an overview of experimental psychology from the perspective of the behavioral psychologist. R.W. Shapiro and E. Strömberg discuss the relevance of epidemiological methods and techniques for biological psychiatry. J. Richer presents the basics of human ethology. P. Gram surveys child development. F.A. Jenner and J. Damas-Mora consider the chronobiology of normal and pathological behavior. D.R. Hanson and I.I. Gottesman present a basic overview of genetic concepts for psychopathology. S.D. Iversen and R. Kumar consider animal models that are relevant to biological psychiatry. O.J. Rafaelsen and B-E. Roos consider the teaching of psychopharmacology and research in biological psychiatry, respectively. And N.C. Andreasen and R.L. Spitzer review the classification of psychiatric disorders with emphasis on the Research Diagnostic Criteria and *DSM-III*.

This volume is heterogeneous in content, covering such areas as statistics, experimental psychology, epidemiology, ethology, and animal models, and many of the individual chapters are underpinnings not only for biological psychiatry in particular but also for behavioral biology and scientific research in general. In this regard, volume I may prove to be more enduring than the rest of the volumes of this *Handbook*.

Volume III covers the genetic and neuroendocrinologic aspects of brain mechanisms and abnormal behavior. In the genetics section, D. Rosenthal discusses the genetic aspects of schizophrenia; E. Zerbini-Rudin considers the genetics of affective psychoses, neuroses, psychopathy, and alcoholism; and J. Mendlewicz relates psychiatric genetics to psychiatric epidemiology and nosology. These chapters are well written and informative. In the neuroendocrinology section, S. Lal and J.B. Martin present an extensive review of the neuroanatomy and neuropharmacologic regulation of neuroendocrine function; E.J. Sachar briefly discusses neuroendocrine research approaches; B.J. Carroll reviews much of his and others' work on the dexamethasone suppression test in depression; M. Ackenheil presents data on hormonal responses to assorted stresses in mental illness, including
