**Handbook on Decision Making** Chee Peng

Lim, 2010-09-07 Decision making arises when we wish to select the best possible course of action from a set of alternatives. With advancements of the digital technologies it is easy and almost instantaneous to gather a large volume of information and/or data pertaining to a problem that we want to solve. For instance, the world wide web is perhaps the primary source of information and/or data that we often turn to when we face a decision making problem. However, the information and/or data that we obtain from the real world often are complex and comprise various kinds of noise. Besides real world information and/or data often are incomplete and ambiguous owing to uncertainties of the environments. All these make decision making a challenging task. To cope with the challenges of decision making, researchers have designed and developed a variety of decision support systems to provide assistance in human decision making processes. The main aim of this book is to provide a small collection of techniques stemmed from artificial intelligence as well as other complementary methodologies that are useful for the design and development of intelligent decision support systems. Application examples of how these intelligent decision support systems can be utilized to help tackle a variety of real world problems in different domains e.g. business management, manufacturing, transportation and food industries and biomedicine are also presented. A total of twenty chapters which can be broadly divided into two parts i.e. Handbook on Decision Making Jie Lu, Lakhmi C Jain, Guangquan Zhang, 2012-03-15 This book presents innovative theories, methodologies and techniques in the field of risk management and decision making. It introduces new research developments and provides a comprehensive image of their potential applications to readers interested in the area. The collection includes computational intelligence applications in decision making, multi-criteria decision making under risk, risk modelling, forecasting and evaluation, public security and community safety, risk management in supply chain and other business decision making, political risk management and disaster response systems. The book is directed to academic and applied researchers working on risk management, decision making and management information systems. **Handbook on Decision Support Systems**, 2008 **Decision Support Systems X: Cognitive Decision**
