Y. Ho, Sang Bin Lee, 2004-01-15 The essential premise of this book is that theory and practice are equally important in describing financial modeling In it the authors try to strike a balance in their discussions between theories that provide foundations for financial models and the institutional details that provide the context for applications of the models The book presents the financial models of stock and bond options exotic options investment grade and high yield bonds convertible bonds mortgage backed securities liabilities of financial institutions the business model and the corporate model It also describes the applications of the models to corporate finance Furthermore it relates the models to financial statements risk management for an enterprise and asset liability management with illiquid instruments The financial models are progressively presented from option pricing in the securities markets to firm valuation in corporate finance following a format to emphasize the three aspects of a model the set of assumptions the model specification and the model applications Generally financial modeling books segment the world of finance as investments financial institutions corporate finance and securities analysis and in so doing they rarely emphasize the relationships between the subjects This unique book successfully ties the thought processes and applications of the financial models together and describes them as one process that provides business solutions Created as a companion website to the book readers can visit www.thomasho.com to gain deeper understanding of the book's financial models Interested readers can build and test the models described in the book using Excel and they can submit their models to the site Readers can also use the site's forum to discuss the models and can browse server based models to gain insights into the applications of the models For those using the book in meetings or class settings the site provides Power Point descriptions of the chapters Students can use available question banks on the chapters for studying Digital Transformation in Data-Driven Financial Compliance: A Business Analyst's Guide 2025 Author :1- SANJAY C. The Handbook of Climate

Change Leadership in Organisations

Doug MacKie, 2023-11-27

Climate change is one of the most significant and challenging problems we face today and many organisations have recognised their responsibility in reducing emissions and environmental degradation and regenerating biodiversity. However, conventional leadership has failed to respond adequately to the magnitude of the threat and a profound change in corporate leadership is required to substantively cut emissions and change climate policy to minimise further destructive environmental impact. This book sets out the qualities and approaches needed by leaders to successfully develop and implement climate change mitigation and adaptation policies. Bringing together the foremost experts in climate change leadership from business leadership psychology and coaching backgrounds, this book addresses the failures of current leadership practice and proposes a variety of models of how climate change leadership capabilities can be effectively developed in organisations. It is structured around four concepts: foundations, which includes models of environmental, ecological and evolutionary leadership transitions; which looks at transformational and ethical models that are being repurposed for the age of sustainability; progressions, which explores innovative models that are being developed for the current age including systems adaptation and maturity based models of leadership and actions; which includes models of sustainable goal setting and climate leadership coaching and development. The book is written for corporate leaders, researchers and educators and will be an invaluable addition to the leadership curriculum and executive development programmes to help the next generation of leaders respond to global challenges.
