materials can potentially be used by terrorists to attack civilians or to destroy critical infrastructure This handbook provides models from Operations Research and Management Science that study various activities involving hazmat transportation risk assessment route planning location decisions evacuation planning and emergency planning for terrorist attacks There are two important research areas in hazmat transportation that are widely studied in the literature risk assessment and shipment planning In the risk assessment area important issues include measurement of accident probabilities and consequences in hazmat transport Example works in the risk assessment area include modeling risk probability distribution over given areas considering hazmat types and transport modes and environmental conditions. The first half of this handbook covers the two fields of risk assessment and shipment planning while the second half of this handbook provides useful models and insights on other important issues including location problems for undesirable facilities network interdiction terrorist attack and Hazardous Materials Response Handbook L.
