Kaler,2001-03-22 Over the past 200 years our knowledge of stars has expanded enormously From seeing myriad dots of different brightnesses we moved on to measure distances temperatures sizes chemical compositions even ages finding stars that dwarf our Sun and are dwarfed by it some in their youth others ancient First published in 2001 Extreme Stars describes the lives of stars from a fascinating perspective It examines their amazing extremes and results in an engaging overview of stellar evolution suitable for anyone interested in viewing or studying stars Ten chapters generously illustrated throughout explain the natures of the brightest the largest the hottest the youngest and so on ending with a selection of the strangest stars the Universe has to offer Taken as a whole the chapters show how stars develop and die and how each extreme turns into another under the inexorable twin forces of time and gravity [Explaining Lithium Enriched Red Giant Branch Stars](#) Claudia Aguilera-Gómez,2018-11-28 This thesis provides new insights into the seemingly anomalous ubiquity of lithium rich red giant stars The theory of stellar evolution one of the most successful models of modern

astrophysics predicts that red giant stars should display negligible levels of lithium Li on their surfaces However Li rich giants defined as those showing more than three times the Li content of the Sun are found everywhere astronomers look in apparent defiance of established theory The author addresses this problem analyzing the different possible explanations for such an anomaly which include interaction with a binary companion the production of Li in the interior of the star with its subsequent transport to stellar exteriors and the stellar interaction with planets The author focuses on this last possibility where the Li enrichment may be due to the ingestion of planets or brown dwarfs as the stars in question grew in size while becoming giants She shows that this process is indeed able to explain an important fraction of giants with Li levels above the three times solar threshold but that some other mechanism is needed to explain the remaining fraction While this is an important discovery in its own right the result that makes this thesis groundbreaking is its demonstration that the threshold between Li normal and Li rich is mass dependent rather than a fixed proportion of the Sun's content This corrects a fundamental misapprehension of the phenomenon and opens up a new framework in which to understand and solve the problem Finally the author presents interesting observational applications and samples with which to test this new approach to the problem of Li enrichment in giants

Stoneham family business struggled and the team was forced to sell off its beloved stars first Willie Mays then Willie McCovey and finally Juan Marichal Then Stoneham had no choice but to sell the club in 1975 While his tenure came to an unfortunate end he is heralded as a pioneer and leader whose story tells much of baseball history from the 1930s through the 1970s

Asymptotic Giant Branch Stars Harm Jan Habing, 2004 This book deals with stars during a short episode before they undergo a major and fatal transition Soon the star will stop releasing nuclear energy it will become a planetary nebula for a brief but poetic moment and then it will turn into a white dwarf and slowly fade out of sight Just before this dramatic change begins the star has reached the highest luminosity and the largest diameter in its existence and while it is a star detectable in galaxies beyond the Local Group its structure contains already the inconspicuous white dwarf it will become It is called an asymptotic giant branch star or AGB star Over the last 30 odd years AGB stars have become a topic of their own although individual members of this class had already been studied for centuries without realizing what they were In the early evolution so called E AGB phase the stars are a bit bluer than but otherwise very similar to what are now called red giant branch stars RGB stars It is only in the second half of their anyhow brief existence that AGB stars differ fundamentally from RGB stars
