**Enzymes Biotechnology Handbook** NIIR Board of Consultants & Engineers,2004-01-01 Industrial biotechnology is the practice of using cells to generate industrially useful products An enzyme is a protein that catalyzes or speeds up a chemical reaction Enzymes are the focal point of biotechnological processes without them biotechnology as a subject would not exist The main advantage of enzymes compared to most other catalysts is their stereo region and chemo selectivity and specificity Enzymes are responsible for many essential biochemical reactions in micro organisms plants animals and human beings Biotechnology processes may have potential in energy production specifically in the substitution of renewable plant biomass for fossil feedstock This will depend on the development of enzymes able to degrade cellulose in plant biomass and designing methods to recycle or dispose of spent biomass With time research and improved protein engineering methods many enzymes have been genetically modified to be more effective at the desired temperatures pH or under other manufacturing conditions typically inhibitory to enzyme activity e g harsh chemicals making them more suitable and efficient for industrial or home applications Enzymes are used in the extraction of natural products as catalysts in

organic chemistry in clinical analysis in industrial processes and so on The application of enzymes is found in many different fields and it is one of the good sectors to venture In coming few years it is estimated that world enzyme demand will average annual increases of 6.3 percent This book basically deals with principles of industrial enzymology basis of utilization of soluble and immobilized enzymes in industrial processes principles of immobilization of enzymes enzymes in clinical analysis principles practical aspects of large scale protein purification the applications of enzymes in industry use of enzymes in the extraction of natural products data on techniques of enzyme immobilization and bio affinity procedures etc In this book you can find all the basic information required on the fundamental aspects of the enzymes their chemistry bio chemistry as well as detailed information of their applications a wide variety of industrial processes etc The book is very useful for research scholars technocrats institutional libraries and entrepreneurs who want to enter into the field of manufacturing of enzymes

Colin Ratledge, 2012-12-06 Life on the planet depends on microbial activity The recycling of carbon nitrogen sulphur oxygen phosphate and all the other elements that constitute living matter are continuously in flux microorganisms participate in key steps in these processes and without them life would cease within a few short years The comparatively recent advent of man made chemicals has now challenged the environment where degradation does not occur accumulation must perforce take place Surprisingly though even the most recalcitrant of molecules are gradually broken down and very few materials are truly impervious to microbial attack Microorganisms by their rapid growth rates have the most rapid turn over of their DNA of all living cells Consequently they can evolve altered genes and therefore produce novel enzymes for handling foreign compounds the xenobiotics in a manner not seen with such effect in other organisms Evolution with the production of micro organisms able to degrade molecules hitherto intractable to breakdown is therefore a continuing event Now through the agency of genetic manipulation it is possible to accelerate this process of natural evolution in a very directed manner The time scale before a new microorganism emerges that can utilize a recalcitrant molecule has now been considerably shortened by the application of well understood genetic principles into microbiology However before these principles can be successfully used it is essential that we understand the mechanism by which molecules are degraded otherwise we shall not know where best to direct these efforts      *Carbohydrates in Food* Ann-Charlotte Eliasson, 1996-01-02 This work offers
