Gates, 2003 The daily headlines continue to reflect and emphasize the necessity for expertise in the field of infection: E. coli contaminated meat, West Nile Virus spreads, White Powder discovered, Bacteria specific viral lysins may hold key to new class of antibiotics. Hope for new AIDS vaccine trial are just a few examples. New chapters are devoted to the rapidly emerging technologies that aid in the diagnosis and treatment of infection, the horrifying but real threat of biowarfare, and the role of the entire medical team, not just the ID doc, in combating infections. Content has been revised and updated to reflect current knowledge and understanding of infectious disease processes. The emphasis on the sound foundation of how to explore and discover new information is retained. Common infectious diseases are emphasized. Treatment options are clearly detailed, including advantages and disadvantages of various regimens. Useful background information is presented for every infection, such as origin of the name, mode of transmission, typical hosts, geographic location, seasonal patterns, and associated clinical syndromes. The three new chapters are the obligatory and timely bioterrorism, radiologic imaging, and surgical implications of infection. **Field Manual for the Investigation of Fish Kills** Fred P. Meyer, Lee A. Barclay, 1990 Fish kills are graphic evidence of serious problems in a lake or stream. If the kill is related to the presence of toxic chemicals, there may be human health concerns in addition to the obvious damage to the ecosystem and the fisheries resources. Depending on the cause of a fish kill, legal and economic ramifications may be involved. If the kill is caused by human or corporate actions, litigation is likely to follow with possible court awarded damages and assessed costs for cleanup and restoration. This manual is intended to help fisheries biologists and others to prepare for a fish kill investigation.
