Baker, Daniel J. Benny, 2016-04-19 Creating a sound security plan involves understanding not only security requirements but also the dynamics of the marketplace employee issues and management goals Emphasizing the marriage of technology and physical hardware this volume covers intrusion detection access control and video surveillance systems including networked video It addresses the reasoning behind installations how to work with contractors and how to develop a central station for monitoring It also discusses government regulations Case examples demonstrate the alignment of security program management techniques with not only the core physical security elements and technologies but also operational security

practices     Libraries and Archives Susan G. Swartzburg, Holly Bussey, Frank Garretson, 1991     *Education Facility Security Handbook* Don Philpott, Michael Kuenstle, 2007-10-29 In the last decade more than 300 violent deaths have occurred in or near school campuses The killers their motivations and backgrounds and levels of damage inflicted vary but our response and our goal remains singular to protect our schools and keep those within them safe This handbook seeks to help administrators school boards contractors teachers anyone connected with the design construction or administration of schools achieve this goal by providing easy to follow guidelines for building safer school environments Drawing from various government resources including the Centers for Disease Control Department of Education Department of Defense and Department of Health and Human Services this one of a kind handbook takes a two part approach to protecting schools from threats The first part addresses how to design and build a safe school It provides a basic security overview and discusses how to identify critical assets and conduct risk threat assessments The second part of the book shifts from infrastructure to inhabitants Here you ll learn how to produce a detailed crisis management plan to help your facility prevent incidents from happening and to deal with them swiftly and effectively should one occur You ll also learn various people policies and practices you can implement to reduce drug and alcohol abuse bullying vandalism and other violence and crime     21st Century Security and CPTED Randall I. Atlas, 2013-06-25 The concept of Crime Prevention Through Environmental Design CPTED has undergone dramatic changes over the last several decades since C Ray Jeffery coined the term in the early 1970s and Tim Crowe wrote the first CPTED applications book The second edition of 21st Century Security and CPTED includes the latest theory knowledge and practice of     Risk Management Series: Site and Urban Design for Security - Guidance Against Potential Terrorist Attacks Federal Emergency Agency, U. S. Department Security, 2013-01-27 The Federal Emergency Management Agency FEMA has developed this publication Site and Urban Design for Security Guidance against Potential Terrorist Attacks to provide information and design concepts for the protection of buildings and occupants from site perimeters to the faces of buildings The intended audience includes the design community of architects landscape architects engineers and other consultants working for private institutions building owners and managers and state and local government officials concerned with site planning and design Immediately after September 11 2001 extensive site security measures were put in place particularly in the two target cities of New York and Washington However many of these security measures were applied on an ad hoc basis with little regard for their impacts on development pat terns and community character Property owners government entities and others erected security barriers to limit street access and installed a wide variety of security devices on sidewalks buildings and transportation facilities The short term impacts of these measures were certainly justified in the immediate aftermath of the events of September 11 2001 but traffic patterns pedestrian mobility and the vitality of downtown street life were increasingly jeopardized Hence while the main objective of this manual is to reduce physical damage to buildings and related infrastructure through site design the purpose of FEMA 430 is also to

ensure that security design provides careful attention to urban design values by maintaining or even enhancing the site amenities and aesthetic quality in urban and semi urban areas This publication focuses on site design aimed to protect buildings from attackers using vehicles carrying explosives These represent the most serious form of attack Large trucks enable terrorists to carry very large amounts of explosives that are capable of causing casualties and destruction over a range of many hundreds of yards Perimeter barriers and protective design within the site can greatly reduce the possibility of vehicle penetration Introduction of smaller explosive devices carried in suitcases or backpacks must be prevented by pedestrian screening methods Site design for security however may impact the function and amenity of the site and barrier and access control design may impact the quality of the public space within the adjacent neighborhood and community The designer s role is to ensure that public amenity and the aesthetics of the site surroundings are kept in balance with security needs This publication contains a number of examples in which the security amenity balance has been maintained through careful design and collaboration between designers and security experts Much security design work since September 11 2001 has been applied to federal and state projects and these provide many of the design examples shown At present federal government projects are subject to mandatory security guidelines that do not apply to private sector projects but these guidelines provide a valuable information resource in the absence of comparable guidelines or regulations applying to private development Operations and management issues and the detailed design of access control intrusion alarm systems electronic perimeter protection and physical security devices such as locking devices are the province of the security consultant and are not covered here except as they may impact the conceptual design of the site Limited information only is provided on some aspects of chemical biological and radiological CBR attacks that are significant for site designers extensive discussion of approaches to these threats can be found in FEMA 426
