Towell, 2003-08-14 Second language acquisition has to integrate the totality of the SLA process which includes both the learning of the core syntax of a language and the learning of the lexical items that have to be incorporated into that syntax But these two domains involve different kinds of learning Syntax is learnt through a process of implementing a particular set of universal structures whereas the learning of lexis is characterised by the building up of associations or connections Yet these two systems must come together in the creation of a whole linguistic system in the mind of an individual This book is designed to state the implications of these two paradigms in as clear a way as possible through examples of the research carried out within each paradigm and to examine how they can be made to inter relate in a way which would enable us to explain better the overall process of SLA *The Neural Basis of Human Belief Systems* Frank Krueger, Jordan Grafman, 2012-08-21 Is the everyday understanding of belief susceptible to scientific investigation Belief is one of the most commonly used yet unexplained terms in neuroscience Beliefs can be seen as forms of mental representations and one of the building blocks of our conscious thoughts This book provides an interdisciplinary overview of what we currently know about the neural basis of human belief systems and how different belief systems are implemented in the human brain The chapters in this volume explain how the neural correlates of beliefs mediate a range of explicit and implicit behaviours ranging from moral decision making to the practice of religion Drawing inferences from philosophy psychology psychiatry religion and cognitive neuroscience the book has important implications for understanding how different belief systems are implemented in the human brain and outlines the directions which research on the cognitive neuroscience of beliefs should take in the future *The Neural Basis of Human Belief Systems* will be of great interest to researchers in the fields of psychology philosophy psychiatry and cognitive neuroscience **Talking Heads** Gianfranco Denes, 2012-05-23 The origin development and nature of language has been the focus of theoretical debate among philosophers for many centuries Following the pioneering clinical observations 150 years ago of loss of language following a cerebral lesion language started to be considered a biological system that could be investigated scientifically As a consequence an increasing number of scientists began to search for its anatomical and functional basis and its links with other such cognitive systems The relatively recent introduction of neuroimaging tools such as PET and fMRI has brought rapid and groundbreaking developments to the field of Neurolinguistics In this book Denes harnesses these advances to adopt a biolinguistic approach to the study of a subject that increasingly sees the collaboration of linguists experimental psychologists neuroscientists and clinicians *Talking Heads*

reviews the latest research to provide a concise analysis of the multifaceted aspects of language which focuses both on theoretical aspects and physical implementation Following an up to date description of acquired language disorders and their contribution to the design of a functional architecture of language the book illustrates the neurological process involved in the production and comprehension of spoken and written language as well as investigating the neurological and functional systems responsible for sign language production and first and second language acquisition With a glossary of the anatomical and linguistic terms this book provides an invaluable resource to undergraduate and graduate students of psychology psycholinguistics and linguistics

Translation and Cognition Gregory M. Shreve, Erik Angelone, 2010-05-28 *Translation and Cognition* assesses the state of the art in cognitive translation and interpreting studies by examining three important trends methodological innovation the evolution of research design and the continuing integration of translation process research results with the core findings of the cognitive sciences Several of the volume's essays focus on fruitful new process research methods such as eye tracking and keystroke logging that have arisen to supplement the use of think aloud protocols Another set of contributions investigates how some central theories concepts and methods from our sister disciplines of psycholinguistics cognitive psychology and neuroscience can inform our understanding of translation processes and their development in novices and experts Yet another set of essays argues that methodological innovation and integration with the cognitive sciences can lead to more robust research designs and theoretical frameworks to explain the intricacies of cognitive processing during translation and interpreting Thus this timely volume actively demonstrates that a new theoretical and methodological consensus in cognitive translation studies is emerging promising to greatly improve the quality verifiability and generalizability of translation process research
