Bang non l'Inizio di Tutto l'ipotizzato evento all'origine dello spazio tempo cui spesso si collega questa espressione ma il fenomeno fisico ormai assodato che segna l'avvento del cosmo descrivibile dalle leggi fisiche conosciute L'istante iniziale di una zuppa calda che contiene tutti gli ingredienti dell'odierno universo Dalle diatribe più accese alle prime conferme empiriche del Big Bang questo libro ripercorre le scoperte di grandi pensatori e scienziati fino a condurci alle frontiere dell'attuale ricerca scientifica Una parabola affascinante e stimolante che affronta concetti complessi con la fluidità del racconto e ci permette di comprendere meglio l'universo attorno a noi Otherness in Hispanic Culture Teresa Fernandez Ulloa, 2014-06-26 This book addresses contemporary discourses on a wide variety of topics related to the ideological and epistemological changes of the 19th 20th and 21st centuries and the ways in which they have shaped the Spanish language and cultural manifestations in both Spain and Hispanic America The majority of the chapters are concerned with otherness in its various dimensions the alien Other foreign immigrant ethnically different disempowered female or minor as well as the Other of different sexual orientation and or ideology Following Octavio Paz otherness is expressed as the attempt to find the lost object of desire the frustrating endeavour of the androgynous Plato wishing to embrace the other half of Zeus who in his wrath tore off from him Otherness compels human beings to search for the complement from which they were severed Thus a male joins a female his other half the only half that not only fills him but which allows him to return to the unity and reconciliation which is restored in its own perfection formerly altered by divine will As a result of this transformation one can annul the distance that keeps us away from that which not being our own turns into a source of anguish The clashing diversity of all things requires the human predisposition to accept that which is different Such a predisposition is an expression of epistemological ethical and political aperture The disposition to co exist with the different is imagined in the de anthropocentricization of the bonds with all living realms And otherness is in some way the reflection of sameness mismidad The other is closely related to the self because the vision of the other implies a reflection about the self it implies consciously or not a relationship with the self These topics are addressed in this book from an interdisciplinary perspective encompassing arts humanities and social sciences *The Big Bang the Creation and Evolution of the Universe* Joseph Silk, 1980

can be considered the founder of the Big Bang Theory and a visionary architect of modern Cosmology The scientific community is only beginning to grasp the full extent of the legacy of this towering figure of 20th century physics Against the best advice of the greatest names of his time the young Lema tre was convinced solely through the study of Einstein s theory of General Relativity that space and time must have had a beginning with a tremendous Big Bang from a quantum primeval atom resulting in an ever expanding Universe with a positive cosmological constant But how did the young Lema tre essentially on his own come to grips with the physics of Einstein A year before his ordination as a diocesan priest he submitted the audacious treatise published in this book that was to earn him Fellowships to study at Cambridge MIT and Harvard and launched him on a scientific path of ground breaking discoveries Almost a century after Lema tre s seminal publications of 1927 and 1931 this highly pedagogical treatise is still of timely interest to young minds and remains of great value from a history of science perspective

Cosmology Without God? David Alcalde, 2019-06-26 Is God a superfluous hypothesis for modern cosmology According to the normal understanding of modern science the answer should be affirmative because modern science is supposed to be free of metaphysical and theological presuppositions However despite its self proclaimed neutrality regarding metaphysics and theology modern science is full of metaphysical and theological presuppositions These can be summarized as a mechanistic understanding of nature a reduction of God to an external agent in competition with natural processes and creation to a worldly mechanism These presuppositions are deficient and untenable and they remain unconscious for the most part in the dialogue between science and theology making it intellectually impossible because of the reduced notions of God nature and creation assumed Using the coherent and unreduced image of God and nature provided by the Christian doctrine of creation ex nihilo Fr David Alcalde intends to uncover and criticize the incoherent theological assumptions inherent in a concrete branch of modern science which is modern cosmology The author points out the presence of these inadequate theological presuppositions in both the theologians who use modern cosmology to offer scientific proof for the existence of God and the atheistic cosmologists who use their science to reject the idea of God
